ATIM radiocommunications provides this document 'as-is' with no warranty of any kind, express or implied, including but not limited to implied warranties of merchantability or fitness for a particular purpose. ATIM radiocommunications may make changes and/or improvements to this manual or to the product(s) or program(s) described in this manual, at any time.

Trademarks and copyright

ATIM radiocommunications®, ACW ATIM Cloud Wireless® and ARM Advanced Radio Modem® are registered trademarks of ATIM SARL in France. The other trademarks mentioned in this document are the property of their respective owners.

Declaration of compliance

All ACW Atim Cloud Wireless® products comply with the regulatory requirements of the R&TTE Directive (1999/5/EC), article 3:

1 SAFETY (Article 3.1a of the 1999/5/EC Directive)

NF EN60950-1 Ed. 2006/A1:2010/A11:2009/A12:2011 (health)

EN62479: 2010 (power <20mW) or EN62311:2008 (power > 20mW)

2 Electromagnetic compatibility (Article 3.1b of the 1999/5/EC Directive)

EN 301489-3 v1.4.1, EN 301489-1 V1.9.2

3 Efficient use of the radio frequency spectrum (Art.3.2 of the 1999/5/EC Directive)

ETSI EN300 220-2 v2.4.1 and EN300 220-1 v2.4.1

Environmental recommendations

Explosive atmosphere

Except for the ACW-ATEX line specifically intended for this purpose, do not use ACW radio modems in the presence of flammable gases or fumes. Using the equipment in such an environment constitutes a safety hazard.

Environment

Respect the temperature ranges for storage and operation of all products. Failing to respect these guidelines could disrupt device operation or damage the equipment. ACW products in IP65 water- and dust-resistant housings may be placed outdoors, but must not, under any circumstances, be submerged.

Follow the instructions and warnings provided below to ensure your own safety and that of the environment and to protect your device from any potential damage.

General hazard – Failure to follow the instructions presents a risk of equipment damage.

Electrical hazard – Failure to follow the instructions presents a risk of electrocution and physical injury.

Direct-current symbol

WARNING: do not install this equipment near any source of heat or any source of humidity.

WARNING: for your safety, it is essential that this equipment be switched off and disconnected from mains power before carrying out any technical operation on it.

WARNING: the safe operation of this product is ensured only when it is operated in accordance with its intended use. Maintenance may only be performed by qualified personnel.

Waste disposal by users in private households within the European Union. This symbol appears on a product or its packaging to indicate that the product may not be discarded with another household waste. Rather, it is your responsibility to dispose of this product by bringing it to a designated collection point for the recycling of electrical and electronic devices. Collection and recycling waste separately at the time you dispose of it helps to conserve natural resources and ensure a recycling process that respects human health and the environment. For more information on the recycling centre closest to your home, contact your closest local government office, your local waste management service or the business from which you purchased the product.

Radio

Modems in the ACW line are radio-communication modems that use the ISM (industrial, scientific and medical) bands, which may be used freely (at no cost and with no authorisation required) for industrial, scientific and medical applications.

Technical features

a. Product

Dimensions	100 x 100 x 35 mm	
Antenna	Integrated (¼ wave)	
Temperature	-20°C à +55°C (operating mode) -40°C à +70°C (storage)	
Mount	Wall	
Power supply	1 battery-pack 3.6V / 7.2 mAh	
Weight	200 g	
Frequency	865 – 870 MHz	
Power	25 mW (14 dBm)	
Rate	Sigfox: 100 bps LoRaWan: 300 bit/s to 10 Kbit/s	
Consumption	Sigfox	LoRaWan
Tx mode	60 mA	50 mA
Sleep mode	7 µA	7 µA
Rx mode	35 mA	18 mA

b. Temperature and humidity sensors

The following ranges refer to the sensor used. WARNING, the product has a smaller operating range than the sensors (see above).

Temperature	Range	-40 to +125°C
	Resolution	0.01°C 14 bits
	Precision from -40°C to -10°C	-0,7°C / +0,9°C
	Precision from -10°C to 85°C	+/- 0,3°C
	Precision from 85°C to 125°C	-0,7°C / +0,9°C
Humidity	Range	0% RH – 100% RH
	Resolution	0.025% RH RMS on 12 bits
	Precision between 0 and 80 %RH	+/- 3% RH

Casing

a. Mounting

ACW-THO modems are fixed on a flat wall using the 4 fixing holes available at each end of the case. For best results, it is recommended to install the case without environmental obstruction and to place it at a minimum height of 2m. For information, the antenna is integrated into the box. It must be mounted on a vertical support or attached to a wall.

b. Identification

The product identifier is visible on the outer label on the back of the product, on the inside of the electronic board and in the status bar of the configuration software.

For LoRaWAN modems the communication keys are automatically given by the network ("Over The Air Activation", or OTAA pairing).

Each product in the ATIM ACW range has a QR Code label visible either on the side or on the front of the product.

This QR code can be easily read with any 2D barcode reader application on a smartphone.

Reading this code indicates the following information:

ATIM|ACW/LW8-THO|C.0|190114|1|3.0|5.11|70B3D59BA0008C0A

Interpretation:

ATIM	ACW/LW8-THO	C.0	190114	1	3.0	5.11	70B3D59BA0008C0A
Manufacturer name	Product reference	Revision number	Date of manufacture	Manufacturing site	Hardware version	Application firmware version	Sigfox ID or DevEUI LoRaWAN

Operating mode

To turn on the product, switch the switch to the ON position.

The ACW-THO sensor measures a temperature and humidity rate at the instant "t" and sends this data by radio to the associated Sigfox or LoRaWAN network, depending on the model used.

Two modes of use are available, periodic or eco-energy.

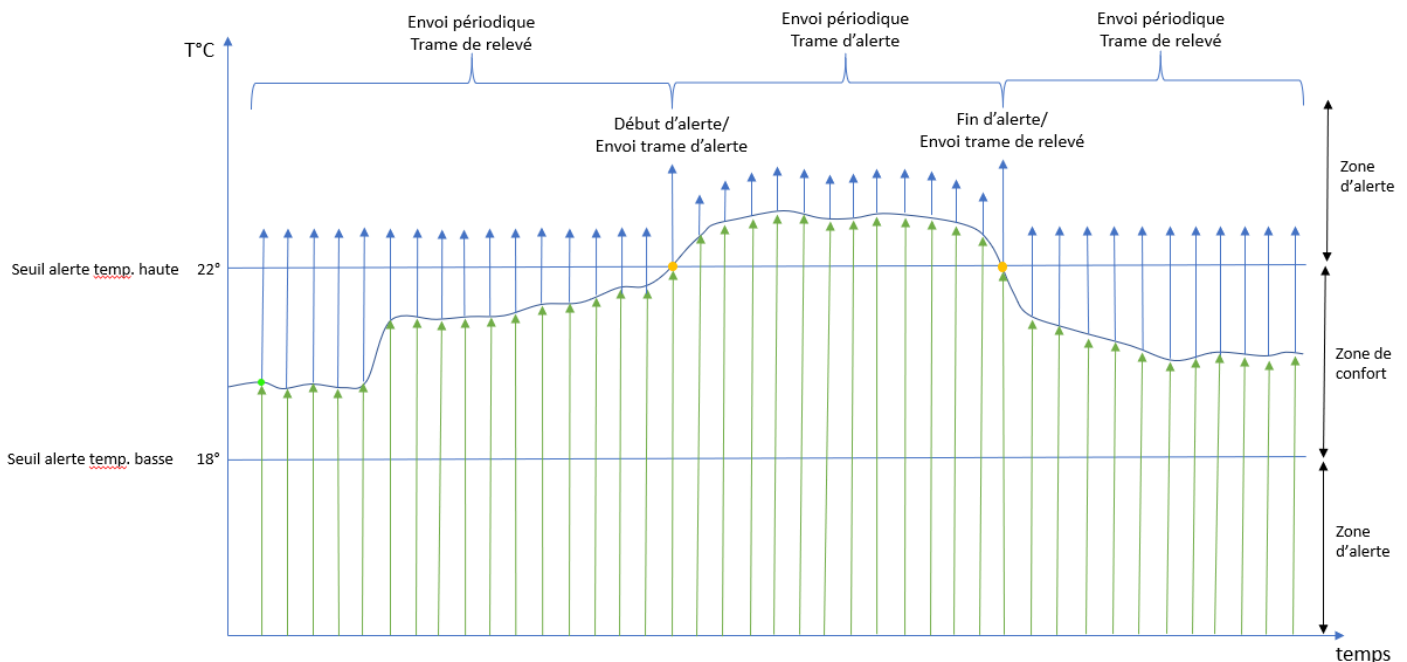

a. Periodic mode (called « periodical » in the configurator)

For a complete telemetry, a temperature and hygrometry reading is sent periodically and regularly. This provides a very accurate tracking curve. In this mode each report is sent by the ACW-THO. The "Sampling period" is therefore equal to the "Statement period".

This period of reading and emission is adjustable by the user, with a minimum of 10 minutes.

Example of periodic mode operation:

On the other hand, because of the regularity of the radio emissions with a potentially high emission frequency, this mode of operation can prove to be energy consuming and to impact the life of the batteries.

b. Eco-energy (called « energy saver » in the configurator)

This mode of operation favors energy saving and promotes battery life.

This mode makes it possible to emit a frame only in certain cases:

- If the temperatures recorded are stable: transmission of a frame only after a defined period (time out).
- If, between two consecutive readings, the variation of $T^{\circ}\text{C}$ is greater than a maximum amplitude defined by the user.
- If a warning threshold is crossed: emission of a frame as soon as the temperature read leaves the comfort zone or when it returns to it.

Example of Eco-energy operating mode:

Phases of operations:

- from 0 to 3 sec: general initialization + USB initialization.
- from 3 to 4 sec: radio initialization.
- from 1 min to 5 min: emission of a test frame every minute.
- at 6th min: emission of a keep alive frame (battery information).
- at 7th min: emission of a temperature / humidity frame.

of operation (periodic or eco-energy) defined by the user

- Life frame emitted once a day or once every 4 days.

ACW configurator

a. Which ACW configurator version to use?

For a TH with the following application software version:	Use the ACW configurator version below:
Sigfox: V4.06 or lower LoRaWAN: V4.08 or lower	V3.7.15, or upper
Sigfox: V5.03 or upper LoRaWAN: V5.10 or upper	V4.0.2, or upper

Download and install the configuration software " setupACW.exe " at:

<http://www.atim.com/fr/support/telecharger/>

When launching the ACW Configurator, the waiting window appears on the screen.

Click "Help" at the top left of the window and then "About" to view the version number of the ACW Configurator.

Then open the plastic case of your ACW-THO module and connect it to your computer with a mini-USB cable.

b. LoRaWAN network pairing configuration

Only applies to the ACW-THO / LW8 version.

On LORAWAN networks, there are two methods of pairing to allow a module to connect to the network.

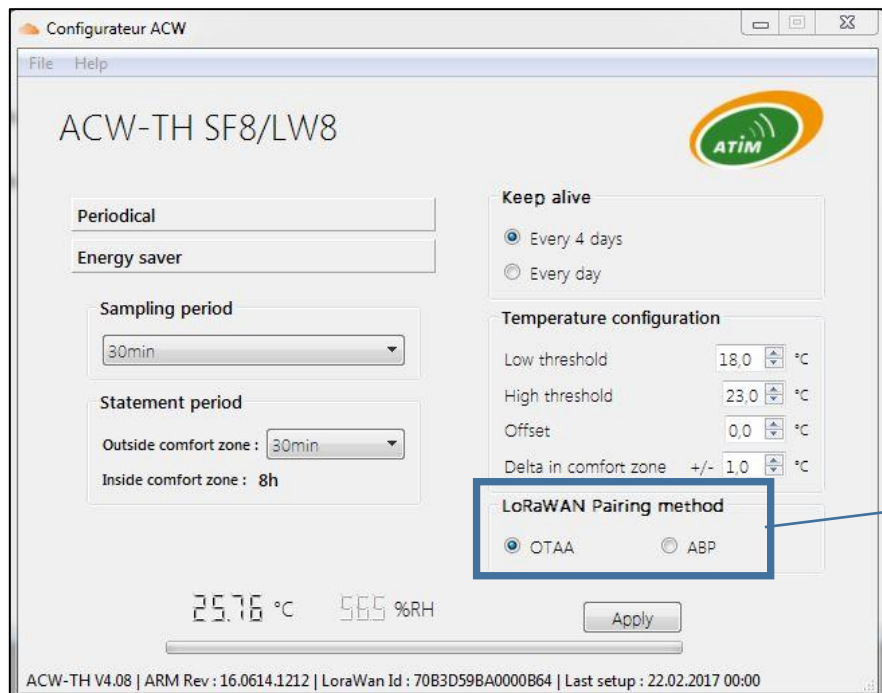

- OTAA (Over The Air Activation):

In this mode, the communication keys are assigned and transmitted by the network each time the module is started or requested to connect. This is the mode that is set by default.

- ABP (Activation By Personalization):

In this mode, the communication keys used are those shipped from the factory in the module. Each time the module is started, the same keys are used.

When you connect the ACW-THO / LW8 to USB, the ACW Configurator automatically detects the factory settings of the module and displays them in the following window:

LoRaWAN pairing mode choice

c. Eco-energy mode configuration (Energy saver)

The screenshot shows the configuration window for the ACW-TH SF8/LW8 device. The 'Energy saver' mode is selected. The 'Sampling period' is set to 2h, and the 'Statement period' is set to 8h. The 'Keep alive' option is set to 'Every day'. The 'Temperature configuration' section shows a low threshold of 18.0 °C, a high threshold of 24.0 °C, an offset of 0.0 °C, and a delta in comfort zone of +/- 1.0 °C. The current temperature is 24.72 °C and humidity is 38.95 %RH. The status bar at the bottom shows the ACW-TH firmware version (V4.08), radio module firmware version (ARM Rev : 5836), network ID (Sigfox Id : 000BE832), and last configuration date (05.05.2017 11:49). An 'Apply' button is visible.

Annotations for this configuration:

- Operation mode choice: Periodical
- Temperature and hygrometry measure period: 2h
- Emission period through operated networks: 8h
- ACW-TH firmware version: V4.08
- Radio module firmware version: ARM Rev : 5836
- Network ID: Sigfox Id : 000BE832
- Last configuration date: 05.05.2017 11:49
- Apply configuration: Apply button
- Keep alive frame emission period: Every day
- Low threshold: 18,0 °C
- High threshold: 24,0 °C
- Offset applied to each measurement, and to the displayed value: 0,0 °C
- T°C gap (compared to the last statement sent). If passing send an alert: +/- 1,0 °C

d. Periodic mode configuration

The screenshot shows the configuration window for the ACW-TH SF8/LW8 device in 'Periodical' mode. The 'Sampling and statement period' is set to 10min. The 'Keep alive' option is set to 'Every day'. The 'Temperature configuration' section shows a low threshold of 18.0 °C, a high threshold of 24.0 °C, and an offset of 0.0 °C. The current temperature is 25.13 °C and humidity is 38.28 %RH. The status bar at the bottom shows the ACW-TH firmware version (V4.08), radio module firmware version (ARM Rev : 5836), network ID (Sigfox Id : 000BE832), and last configuration date (05.05.2017 11:49). An 'Apply' button is visible.

Annotations for this configuration:

- Operating mode choice: Periodical
- Temperature and hygrometry measure period: 10min
- ACW-TH firmware version: V4.08
- Radio module firmware version: ARM Rev : 5836
- Network ID: Sigfox Id : 000BE832
- Last configuration date: 05.05.2017 11:49
- Apply configuration: Apply button
- Keep alive frame emission period: Every day
- Low threshold: 18,0 °C
- High threshold: 24,0 °C
- Offset applied to each measurement, and to the displayed value: 0,0 °C

Once the configuration is complete, do not leave the module connected to USB. This mode of operation is very energy intensive. When you remove the USB link without disconnecting the battery, the module resets and automatically returns to normal operation.

Frames format

a. Sigfox and LoRaWAN

Type	Description	Frame format						
		octet 0 (dec)	octet 0 (hex)	octet 1 (hex)	octet 2 (hex)	octet 3 (hex)	octet 4 (hex)	octet 5 (hex)
Keep Alive	Keep alive frame	1	01	Supply voltage IDLE (mV)		Supply voltage TX (mV)		64
Test	Test frame	5	05	Counter				
TH	Temperature frame	23	17	Temperature code		Humidity code		
TH	Over lower T°C threshold passing alert	15	0F	Temperature code		Humidity code		
TH	Over higher T°C threshold passing alert	17	11	Temperature code		Humidity code		

The sensor data is decoded as follows:

$$T(^{\circ}\text{C}) = \frac{\text{TemperatureCode} \times 175.72}{65536} - 46.85$$

$$H(\%RH) = \frac{\text{HumidityCode} \times 125}{65536} - 6$$

The battery voltage of the products is good if Supply voltage is greater than 2.9V.

b. Local 868MHz

In point-to-point or point-to-multipoint local communication mode, the Modbus RTU protocol is use

Modbus table

Modbus address	Data
0x00 (0)	Digital inputs reading b0: Input 1 state b1: Input 2 state
0x24 (36)	Temperature and humidity reading

Supported Modbus features

Function	Type
0x03 (3)	Multiple registers reading
0x10 (16)	Multiple registers writing

Data decoding

Element	Size	Description	Value
Slave Id	1 octet	Modbus slave ID	14
Code Function	1 octet	0x10 (Write multiple registers)	3
Bytes count	1 octet	N° of octet to read	8
Temperature	2 octets	Temperature code	65fc
Humidity	2 octets	Humidity code	5426
Blank	2 octets	Blank	0
Blank	2 octets	Blank	0
CRC	2 octets	Error control code	XXXX

The sensor data is decoded as follows:

$$T(^{\circ}\text{C}) = \frac{\text{TemperatureCode} \times 175.72}{65536} - 46.85$$

$$H(\%RH) = \frac{\text{HumidityCode} \times 125}{65536} - 6$$

Downlink

This feature is available on ACW-THO that meets the following requirements:

	Software	Radio firmware
SIGFOX version	V5.0.3 Or upper	V5931 Or upper
LoRaWAN version	V5.1.0 Or upper	V2.3.2 Or upper

The USB configuration of these products requires an ACW configurator in version 4.0.2 or higher.

The operation of the downlink is explained in the document ATIM_ACW-DLConfig_UG_FR_v1.1, relating to version V1.1 of the Downlink ATIM protocol.

The parameters specific to ACW-THO are as follows:

a. Keep alive frame emission frequency

Parameter Code (Octet 1)	Parameter value (Octet 2)
0x03	0x00 = once a day, 0x01 = once every days, 0x02 = once every 8 days.

b. Confort zone Delta

Parameter Code (Octet 1)	Parameter value (Octet 2)
0x06	0xYY

For a delta in ° C, with a precision in tenth of ° C, 0xYY is calculated as follows

$$0xYY = \text{delta} \times 10$$

Delta must be between + 0.3 ° C and + 10.0 ° C.

c. Operating mode

Parameter Code (Octet 1)	Parameter value (Octet 2)
0x07	0x00 = Periodic, 0x01 = Energy saver

d. Lower threshold

Parameter Code (Octet 1)	Parameter value (Octet 2)	Parameter value (Octet 3)
0x08	0xYY	0xZZ

For a threshold in ° C, with a precision in tenth of ° C, 0xYY and 0xZZ are calculated as follows:

$$0xZZYY = \frac{(\text{seuil} + 46.85)}{175.72} \times 65536$$

The threshold must be between -20.0 ° C and + 50.0 ° C.

e. Higher threshold

Parameter Code (Octet 1)	Parameter value (Octet 2)	Parameter value (Octet 3)
0x09	0xYY	0xZZ

For a threshold in ° C, with a precision in tenth of ° C, 0xYY and 0xZZ are calculated as follows:

$$0xZZYY = \frac{(threshold + 46.85)}{175.72} \times 65536$$

The threshold must be between -20.0 ° C and + 50.0 ° C.

f. Emission period outside the confort zone

Parameter Code (Octet 1)	Parameter value (Octet 2)
0x0A	0xYY
0x0B	0xZZ

The transmission period will be every 0xYY hours and 0xZZ minutes.

The hours must be between 0 and 24 hours.

The minutes must be between 0 and 59 min.

Be careful, this period must be a multiple of the measurement period.

Example

Si 0xYY = 0x01 et 0xZZ = 0x1E, le produit émettra toutes les 1h30, s'il est paramétré en mode économie d'énergie et qu'il se trouve en dehors de la zone de confort.

g. Temperature and hygrometry periodic measure

Parameter Code (Octet 1)	Parameter value (Octet 2)
0x0C	0xYY
0x0D	0xZZ

The measurement period will be every 0xYY hours and 0xZZ minutes.

The hours must be between 0 and 24 hours.

The minutes must be between 0 and 59 min.

Example

If 0xYY = 0x02 and 0xZZ = 0x0A, the product will take a measurement every 2h10.

h. Temperature offset

Parameter Code (Octet 1)	Parameter value (Octet 2)
0x0E	0xYY (entier signé)

For an offset in ° C, with a precision in tenth of ° C, 0xYY is calculated as follows

$$0xYY = offset \times 10$$

The Offset must be between -3.0 ° C and + 3.0 ° C.

i. LoRaWAN network pairing

Parameter Code (Octet 1)	Parameter value (Octet 2)
0x0F	0x00 = ABP 0x01 = OTAA

ABP : Activation By Personalization

OTAA : Over The Air Activation

j. Codes reserved for future upgrades

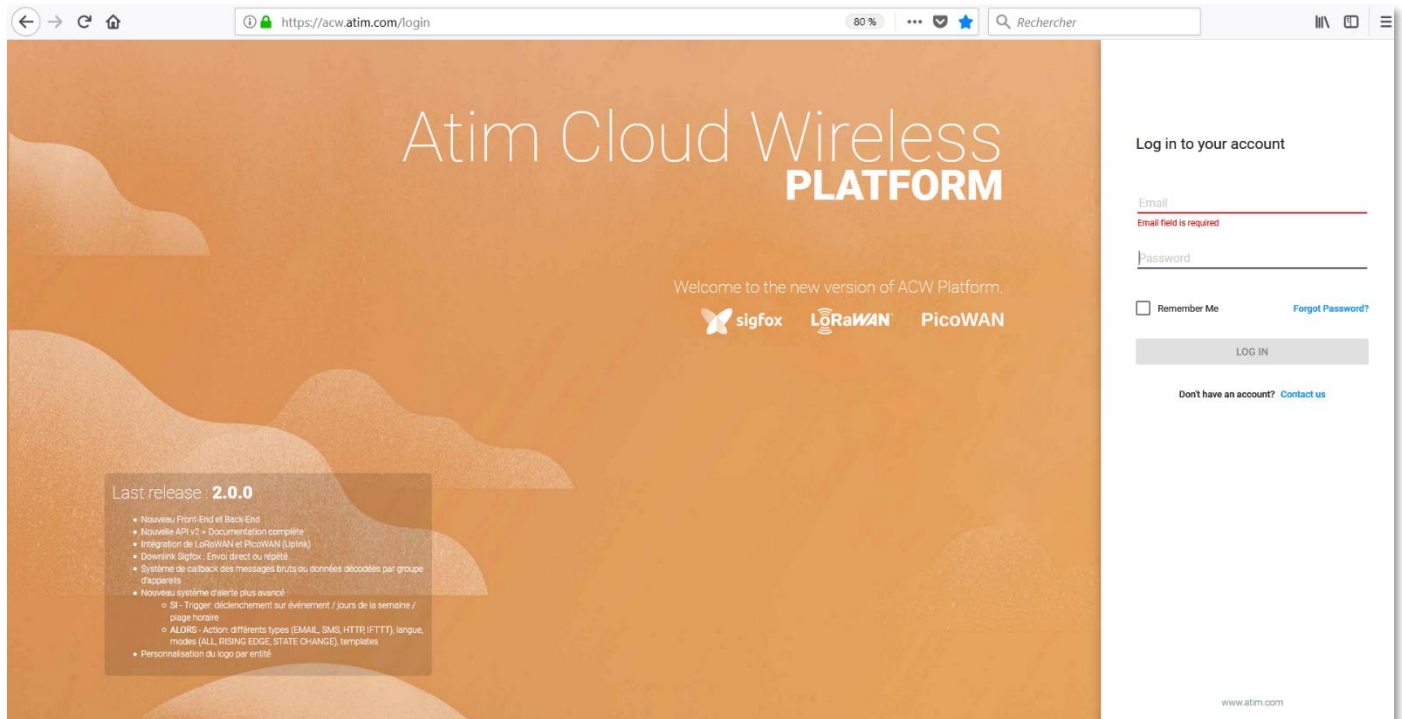

Parameter Code (Octet 1)	Parameter value (Octet 2)
0x10	0x08
0x11	0x00

Warning: DO NOT MODIFY THESE VALUES

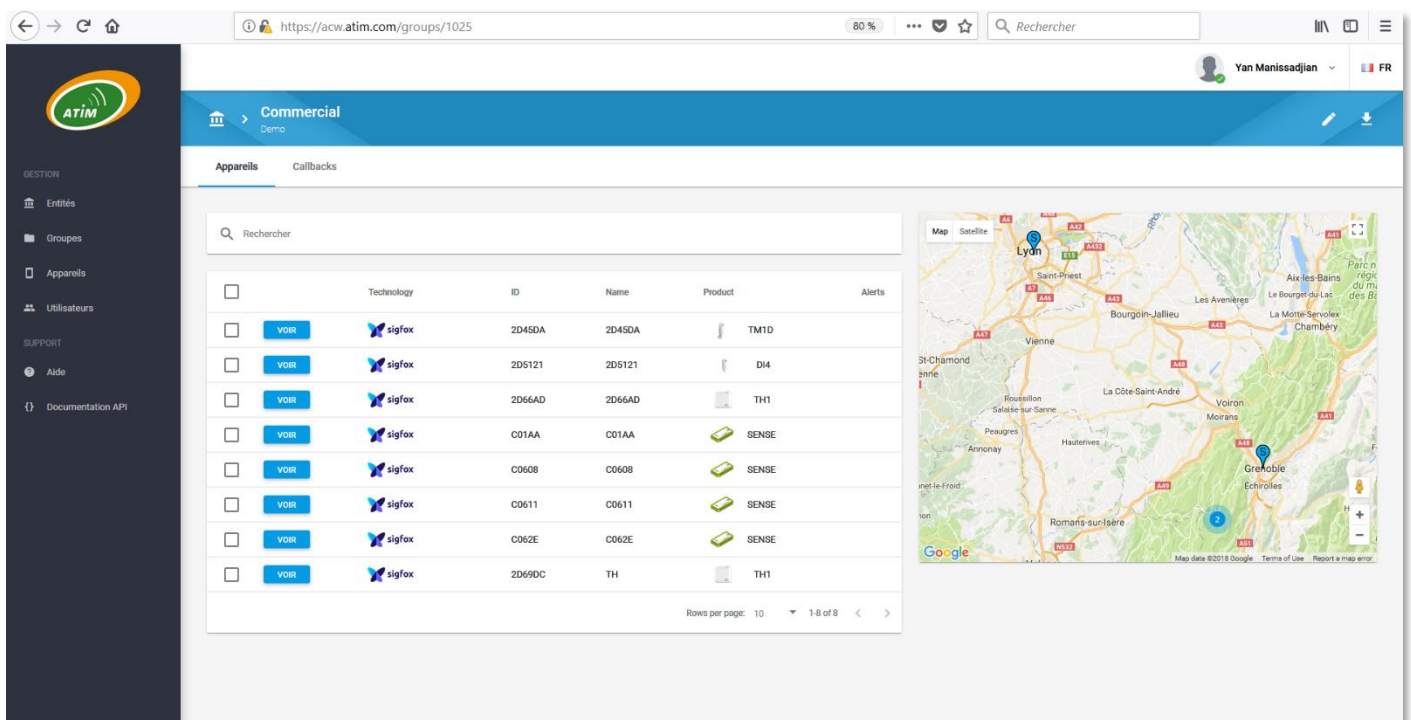

Access to data on the web (Sigfox and LoRa solutions)

a. ACW Cloud Wireless® platform modem visualization

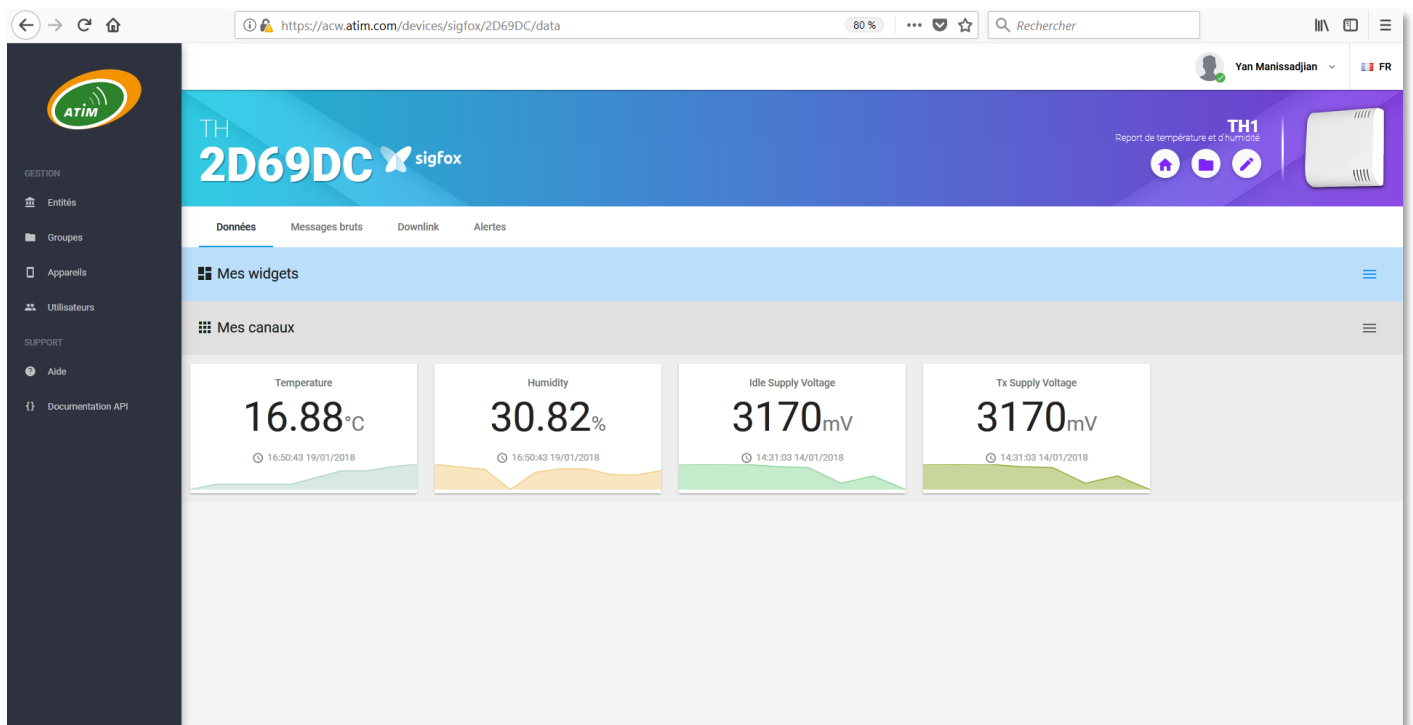

Log on to the web platform <http://acw.beta.atim.com> to access your devices and view your data. Your login details will be provided by email to the shipping of your order.

In the page "My groups" you will find all your geolocated devices according to your installation.

You will find your temperature and humidity readings, as well as the standby and transmit battery voltages (if you requested the display of these information channels):

b. Modem registration on Sigfox network

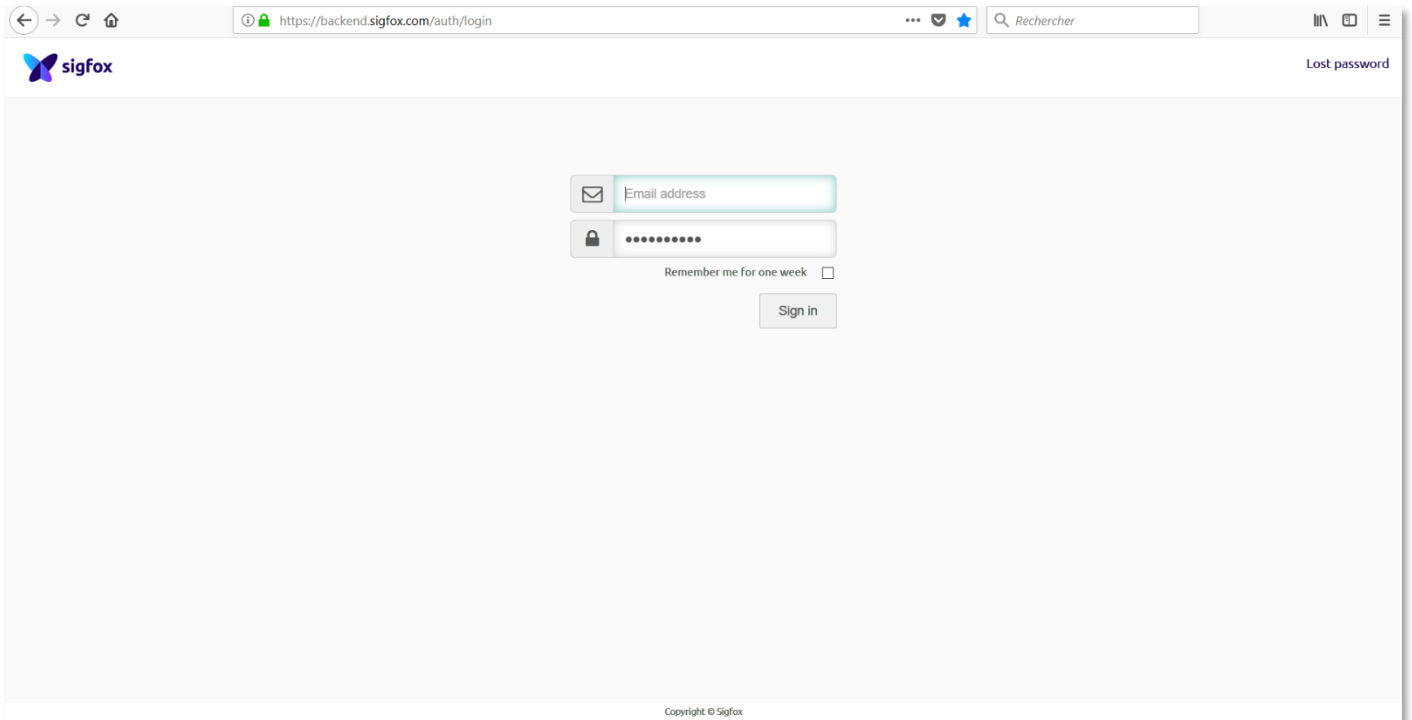

If you have subscribed to a Sigfox network subscription with ATIM, we will register your modem / sensor / sensor on the Sigfox network. On the other hand, if you have subscribed to your Sigfox subscription, you will need to register your device yourself on Sigfox's online portal.

Here is a quick procedure to register your product on the Sigfox network.

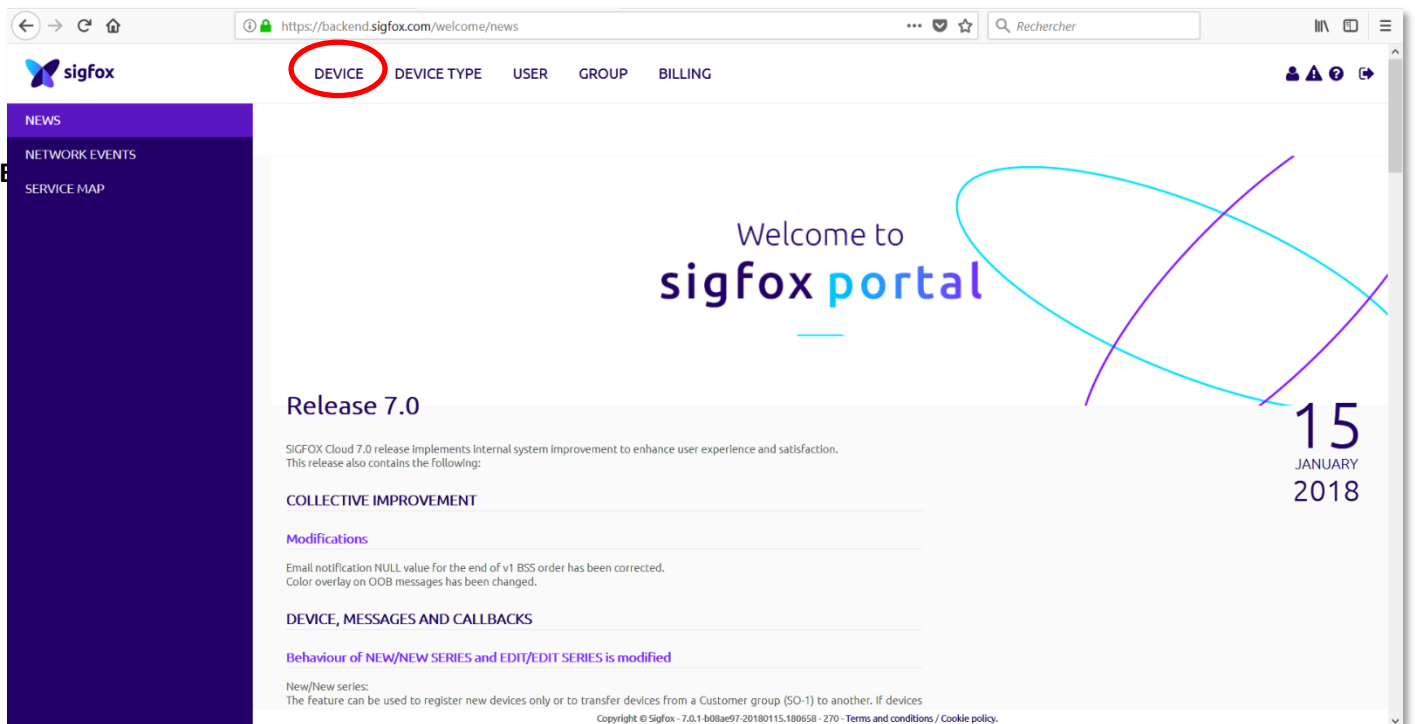

For more details, contact Sigfox customer support directly.

Step 1: Open an Internet browser and go to <https://backend.sigfox.com>.

Enter your login and password when creating your Sigfox customer account:

Step 2: Click on "device" at the top left:

Device - List

Count: 16112 / 16112

Id	Name	Average Rssi	Average SNR	Device type	Last seen	Communication status
79B7A8	ACW0079B7A8	-98.99	52.07	V2_ACW	2018-01-19 13:43:09	●
79B7A6	ACW0079B7A6	-134.24	16.83	V2_ACW	2018-01-19 13:54:16	●

79B798	ACW0079B798	-132.43	18.65	V2_ACW	2018-01-15 15:31:10	●

Step 4: Fill in the information of the new device you want to register to your Sigfox account:

Device - New

Device information

Identifier (hex) 0000

Name

PAC

End product certificate

Where can I find the end product certificate?

Type ACW - Demo

Lat (-90° to +90°) 0.0

Lng (-180° to +180°) 0.0

Map Locate on map

Ok Cancel

Identifiant Sigfox

Code PAC Sigfox

Numéro de certificat Sigfox de votre produit (fourni par ATIM)

Choix du « device type » dans lequel vous souhaitez enregistrer l'appareil

Confirmez les informations en cliquant sur « Ok »

Your product is now being imported into your SIGFOX account. The import may take several hours.

c. Modem registration on LoRaWAN network

Warning

By default the ACW-TH are in ABP procedure. The choice between ABP and OTAA is available through a drop-down menu on the configurator interface. It is advisable to use the OTAA mode.

The product operates in OTAA (over the air activation), when powering up the product a call request (join request) to a LoRa network is issued. The device must first be provisioned on the required network, at one of the operators (Orange or Objenious for example) or existing private gateways.

A new pairing request can be made by powering the device back on.

Help

The modem is not configured via USB or the configurator page does not update

- Check if the power supply is properly connected to the modem
- Check if the light is flashing
- Check that "Windows Update" is enabled, that the PC is connected to the Internet and that the driver installation is complete. Also check that your version of the configurator is up to date (Menu File -> Update).
- Replace the USB cable
- In case of Failed to write the configuration, unplug and reconnect the USB cable

Radio data is not received

- Check if the power supply is properly connected to the modem
- Check if the modem has been registered on the network
- Check if radio network coverage is available
- Check if the red light is illuminated during an emission
- Check if the green light is flashing during a broadcast

Modem LED does not flash

- Check if the power supply is properly connected to the modem
- Configure the modem using the USB configurator

Technical Support

For any information or technical problems, you can contact our technical support by e-mail and phone:

www.atim.com/fr/technical-support
