

Medical PetS Boot Size Guide

Simply2pets.com

Measure the bottom of your dog's paw, width ways at the widest point
Note: When your dog puts pressure on the paw, the paw will splay, so ensure that they are putting weight on the paw you are measuring. If you measure a paw that is not splayed, the shoes may be too small. To help you can gently holding the opposite paw in your hand so all your dog's weight is on the paw you are measuring.

If the paw is in-between two sizes, we recommend you select the smaller size.

Measured the length on the inside of your dog's front or back leg

The Boot should fit securely around the leg and paw.

Remember to take into account bandages etc. to ensure a good fit.
