FALCON EX

Motion Sensor with Explosion-Proof Housing for Industrial Doors

FALCON EX: for normal to high mounting (11.5 - 23 ft)
FALCON EXXL: for low mounting (6.5 - 11.5 ft)
FALCON EXWIDE: for wide detection field

Visit website for available languages of this document.

DESCRIPTION

1. Explosion-proof housing
2. Microwave sensor
3. Adjustable bracket

MICROWAVE SENSOR SPECIFICATIONS

Technology:	microwave doppler radar
Transmitter frequency:	24.150 GHz
Transmitter radiated power:	< 20 dBm EIRP
Transmitter power density:	< 5 mW/cm²
Mounting height:	FALCON EX: 11.5 – 23 ft; FALCON EXXL: 6.5 – 11.5 ft; FALCON EXWIDE: 11.5 – 21 ft
Detection zone:	FALCON EX: 13 x 16 ft @ 16ft; FALCON EXXL: 13 x 6.5 ft @ 8.2 ft FALCON EXWIDE: 30 x 11ft @ 21ft. (typical at 30° and field size 9)
Min. detection speed:	2 in/s*
Supply voltage:	12 – 24 VAC ±10%; 12 – 24 VDC +30% / -10%
Mains frequency:	50 – 60 Hz
Power consumption:	< 2W
Output: max. contact voltage: max. contact current: max. switching power:	relay (free of potential change-over contact) 42V AC/DC 1A (resistive) 30 W (DC) / 60 VA(AC)
Temperature range:	-22 – 140 °F
Housing certification:	(Adalet / Scott Fetzer Co., UL Listing # E81696) UL Class I, Group BCD; Class II, Group EFG; Class III; CENELEC: EExd IIC, IP66, NEMA 4x; 7BCD, 9EFG
Dimensions:	9 in (L) x 7.5 in (W) x 5.5 in (H)
Tilt adjustment angle:	-90 – 30° in elevation
Materials:	Copper-free aluminum (Housing); Powder-coated steel (Bracket)
Weight:	10 lbs
Cable length:	100 ft
Cable diameter:	¼" max
Electrical Access:	¾" NPT pipe thread
Norm conformity:	R&TTE 1999/5/EC; EMC 2004/108/EC

* Measured in optimal conditions

*Specifications are subject to change without prior notice.*
All values measured in specific conditions.

INSTALLATION TIPS

- The sensor must be firmly fastened in order not to vibrate.
- The sensor must not be placed directly behind a panel or any kind of material.
- The sensor must not have any object likely to move or vibrate in its sensing field.
- The sensor must not have any fluorescent lighting in its sensing field.

To access push buttons, you must open the sensor (see image, right):

a) Using a hex key, loosen the set screw located on the side of the housing.

b) Unscrew the housing cover.

Set screw
1   MOUNTING

a) Bolt the bracket securely to the wall or other rigid surface.

Make sure that the two ⁵⁄₁₆ - 18 Allen head bolts are loose so that the sensor can rotate freely.

b) Rotate the sensor to the appropriate angle for the application. When the bracket rotates, it will click. Every click represents a 7 ½" angle adjustment.

c) Lock the angle adjustment by tightening the two ⁵⁄₁₆ - 18 Allen head bolts.

Horizontal angle adjustments can be made by loosening the mounting bolts on the base and twisting to the desired angle.

Maximum angle (+30° above horizon)

Minimum angle (-90° below horizon)
2   WIRING

Connect the wires to the door controller. *Choose between NO and NC contact.*

green ← → yellow
yellow ← → gray

3   DETECTION FIELD DIMENSIONS

**FALCON EX**
Mounting height: **16 ft**
FALCON EXXL
Mounting height: **8 ft**

FALCON EXWIDE
Mounting height: **11.5 ft**

LED SIGNALS

🔴 LED flashes quickly	🔴 LED flashes	🔴 LED flashes slowly	🟢 LED flashes x times	⚪ LED is off

NORMAL MODE		
⚪	no LED	no detection
🔴	red	detection
🔴🟢	red & green blinking	power on / learn

POSSIBLE SETTINGS BY REMOTE CONTROL

ADJUSTING ONE OR MORE PARAMETERS

🔓 — 🔴 — [symbols] — 🔴 — 0-9 — 🔴 — 🔒 🔒 — ⚪

red   *red*   *red*   *off*

CHECKING A VALUE

🔓 — 🔴 — [symbols] — 🔴 — 0-9 — 🟢ˣ — 🔒 🔒 — ⚪

red   *red*   *green*   *off*

x = number of flashes = value of parameter

🎮 🟢 ▷ ⬛ ▷ 0 ① ② ③ ④ ⑤ ⑥ ⑦ ⑧ ⑨ ▷ 🔓 🔒
FIELD SIZE	📐	XXS	XS	S	>	>	>	>	**L**	XL	XXL
HOLD-OPEN TIME	🕐	**0.5 s**	1 s	2 s	3 s	4 s	5 s	6 s	7 s	8 s	9 s
OUTPUT CONFIGURATION	🔀		**A**	P		A = active output; relay energizes upon detection					
					P = passive output; relay de-energizes upon detection					
DETECTION MODE	◀--▶		bi	**uni**	uni AWAY	bi = two-way detection					
					uni = one-way detection towards sensor					
					uni AWAY = one-way detection away from sensor					
DETECTION FILTER	«□»		**1**	2	3	4	5	6			

▢ FACTORY VALUES   RESETTING TO FACTORY VALUES: 🟢 ▷ 🔆 ▷ ⑨

DETECTION FILTER (REJECTION MODE)

Choose the correct detection filter for your application with the remote control or push buttons.

«□» 1-6

Detection of all targets (pedestrians and parallel traffic are detected)	**Detection only of vehicles moving*** (pedestrians and parallel traffic are not detected + disturbances are filtered)
1 = no specific filter 2 = filter against disturbances (recommended in case of vibrations, rain etc.)	Value recommendations according to angle and height:

	23 ft – 11.5 ft	8 ft
-75°	3	3
-60°	4	4
-45°	5	4

Always check if the chosen value is optimal for the application. The object size and nature can influence the detection.

* The vehicle detection filter increases the response time of the sensor.

POSSIBLE SETTINGS BY PUSH BUTTONS

TO START OR END AN ADJUSTMENT SESSION, press and hold either push button until the LED flashes or stops flashing.

	Parameter number	Value (factory values)
1 FIELD SIZE		(7)
2 HOLD-OPEN TIME		(0)
3 OUTPUT CONFIGURATION		(1)
4 DETECTION MODE		(2)
5 DETECTION FILTER		(1)

TO SCROLL THROUGH THE PARAMETERS, press the right push button.

TO CHANGE THE VALUE OF THE CHOSEN PARAMETER, press the left push button.

TO RESET TO FACTORY VALUES, press and hold both push buttons until both LEDs flash.

ACCESS CODE

The access code (1 to 4 digits) is recommended to set sensors installed close to each other.

SAVING AN ACCESS CODE: 🔓 🔓 0-9 0-9 0-9 0-9 🔓 🔓

DELETING AN ACCESS CODE: 🔓 0-9 0-9 0-9 0-9 🔓 🔓 0 🔒 🔒

Once you have saved an access code, you always need to enter this code to unlock the sensor.
If you forget the access code, **cycle the power.** For the first minute, you can access the sensor without an access code.

TROUBLESHOOTING

Door remains closed. LED is off.	Sensor power is off.	Check wiring and power supply.
Door does not react as expected.	Improper output configuration on sensor.	Check the output configuration setting on each sensor connected to the door operator.
Door opens and closes constantly.	The sensor is disturbed by door motion or vibrations caused by door motion.	Ensure sensor is secured properly.
		Ensure detection mode is unidirectional.
		Increase tilt angle.
		Increase detection filter value.
		Reduce field size.
Door opens for no apparent reason.	It rains and the sensor detects raindrops or vibrations.	Ensure detection mode is unidirectional.
		Increase detection filter value.
	In highly reflective environments, the sensor detects objects outside of its detection field.	Change the antenna angle.
		Reduce field size.
		Increase detection filter value.
Vehicle detection filter is used, but pedestrians are still detected.	Chosen value is not optimal for the given application.	Increase detection filter value.
		Decrease sensor angle.
		Increase mounting height.
		Ensure detection mode is unidirectional.
LED flashes quickly after unlocking.	Sensor needs access code to unlock.	Enter correct access code.
		If you forgot the code, cycle the power to access the sensor without access code. Change or delete the access code.
Sensor does not respond to the remote control.	Batteries in the remote control are weak or installed improperly.	Check batteries and change if necessary.

BEA, INC. INSTALLATION/SERVICE COMPLIANCE EXPECTATIONS

BEA, Inc., the sensor manufacturer, cannot be held responsible for incorrect installations or incorrect adjustments of the sensor/device; therefore, BEA, Inc. does not guarantee any use of the sensor/device outside of its intended purpose.

BEA, Inc. strongly recommends that installation and service technicians be AAADM-certified for pedestrian doors, IDA-certified for doors/gates, and factory-trained for the type of door/gate system.

Installers and service personnel are responsible for executing a risk assessment following each installation/service performed, ensuring that the sensor/device system performance is compliant with local, national, and international regulations, codes, and standards.

Once installation or service work is complete, a safety inspection of the door/gate shall be performed per the door/gate manufacturer's recommendations and/or per AAADM/ANSI/DASMA guidelines (where applicable) for best industry practices. Safety inspections must be performed during each service call – examples of these safety inspections can be found on an AAADM safety information label (e.g. ANSI/DASMA 102, ANSI/DASMA 107, UL294, UL325, and International Building Code).

Verify that all appropriate industry signage, warning labels, and placards are in place.
