

# CPL Filter BF-1

---

## Items

Circular Polarizing Lens Filter

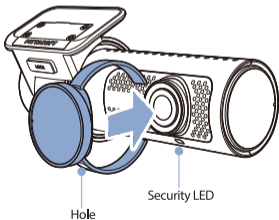

### **Compatible Models**

DR750S Series, DR750X Series

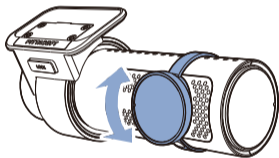

DR900S Series, DR900X Series

## Installation

1. Install on the front camera of a compatible BlackVue dashcam.
2. Make sure there is no dust on the camera's lens or on either side of the CPL Filter. Clean up the surface with a microfiber cloth if needed.
3. Fit the CPL Filter on the dashcam's lens as shown. Make sure the hole on the filter's mount lines up with the Security LED of the dashcam.

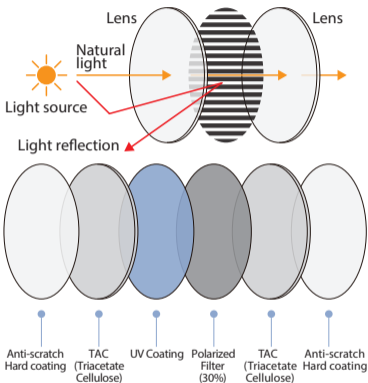

4. Rotate the CPL Filter's ring to adjust the polarization intensity. We recommend adjusting the filter in bright daylight and using Live View on the BlackVue App to check the result in real time.

**Remark:**

Like most polarizing filters, the BlackVue CPL Filter is designed for use in daylight. Therefore, we advise to remove the filter at night to preserve video brightness.
