ACCESS CONTROL SOLUTIONS

4G LTE CELLULAR

FASTEST TO INSTALL, MOST VERSATILE
CELLULAR CONNECTION

The DKS Cellular™ option provides voice communication through a cellular network, much like a mobile phone. The cellular connection also enables completely remote programming for Telephone Entry Systems in the 1830 Series, Access Plus Series, and eVolve Series. The cellular connection is easy to install and sets up with instant access. Cellular is the perfect option for locations that do not have access to a phone or internet line and don't want to dig a trench to add one, properties with remote access points, or for users who want the most up-to-date method of connection – plus, it's more affordable than a traditional business line.

CELLULAR*

A DKS wireless option that replaces standard telephone lines and internet connections. No telephone lines or ethernet cable to install or maintain.

UNLIMITED RANGE
Nationwide coverage. Set up DKS Cellular Telephone Entry System wherever cell service is available in all U.S. states and its territories.

TURNKEY PROGRAMMING
Easy programming from your computer. Use the simple DKS Desktop Account Manager Software for PC or Cloud Programming for any computer, tablet or smartphone, both featuring easy setup and programming from anywhere with an internet connection.

PLUG AND PLAY

Give it power, enable cell service, and you're ready to go.

CELLULAR RETROFIT

CONVERT OLDER SYSTEMS TO CURRENT TECHNOLOGY

Telecommunication companies are switching to a fiber and digital infrastructure which will make programming Telephone Entry Systems via modem communications a challenge – if not impossible. Existing Telephone Entry Systems can be easily retrofitted and updated to a cellular connection with DKS Cellular. In addition to the benefits of 4G LTE service, DKS Cellular saves money in two ways. 1) There's no need to replace an existing Telephone Entry System, and 2) The monthly cost of the DKS Cellular service is typically half the cost of a business telephone line. With the DKS Cellular Retrofit there's no digging or trenching – just plug it in and activate the service.

DESIGNED FOR EVERY PROPERTY

SIMPLE SETUP FOR WELL-WIRED LOCATIONS
VOIP/ETHERNET CONNECTION

Customers who have easy access to an ethernet connection can enable voice communication to their 1800 Series, 1830 Series, Access Plus Series and eVolve Series Entry Systems through the internet using a Voice Over IP phone service. 1830 Series, Access Plus and 2112 Systems can also be programmed remotely using either DKS Desktop Account Manager Software or . Our customers choose this connection option if they have convenient access to the ethernet port for quick internet connection.

INTERNET†*

Use DKS VoIP and TCP/IP adapters for easy plug & play setup. No routers, port forwarding, IP addresses, firewalls or DDNS services to deal with.

TURNKEY PROGRAMMING
Easy programming from your computer. Use DKS Data over the Internet services for easy setup and programming from anywhere.

MANUAL SETUP
You can avoid DKS subscription fees by using TCP/IP adapter 1830-185, which requires manual setup by an IT technician, and your own VoIP provider*.

*While many VoIP services will work with the 1830 system, DoorKing does not guarantee compatibility with these third party providers.

MODEM CONNECTION WITH THE DKS IM SERVER
LEGACY CONNECTION OPTION

Used from the early days of Entry Systems, a telephone line connection provides traditional voice communication. When paired with the DKS IM Server Modem™ customers with 1830 Series and Access Plus Series Telephone Entry Systems can utilize the full benefits of remote PC programming using the Desktop Account Manager Software, or Cloud Programming for 1830 Series Systems only. DKS will be phasing out support for telephone line connections as telecommunication companies are transitioning to fiber and will no longer service copper lines in the near future. DKS recommends selecting a Cellular or Ethernet connection.

*Use optional DKS Cellular part #1800-080.
†Use optional DKS VoIP / TCP/IP Control Box part #2334-080.
‡DoorKing can no longer guarantee modem connections as some phone company services and switches no longer support modem communications since these devices are

considered to be obsolete technology. The telephone line at the entry system must support G.711 level service for the IM Server Modem to work. You should also be aware that modem communications will not work over cellular or VoIP connections.
§For non-service connection set up, see instruction manual, or visit **doorking.com/imserver**

CHOOSE FROM 3 EASY WAYS TO CONNECT YOUR ENTRY SYSTEM TO THE INTERNET

CELLULAR*
No Wires to Run with 4G LTE Installs Anywhere, Even Remote Locations

VOIP/ETHERNET†
No IP Issues, Routers, Port Forwarding, or Firewalls When Location is Wired

PHONE LINE‡
Older Technology, Uses the DKS IMServer to Connect

CONNECTION OPTIONS ACCESSORIES

Cellular Connection Kit
A wireless solution for connecting managers and users to Entry Systems. Voice and data delivered via the AT&T 4G LTE network.

Ethernet Connection Kit
A Plug and Play solution that provides both voice and date via your existing internet connection. *DKS subscription service required.

TCP/IP Adaptor for Manual VoIP Connection
Set up your own Internet and VoIP connections to eliminate DKS subscription services. DoorKing does not guarantee third party service connections.

Cellular Connections will Register on DKS Cellular

DKS Cellular is a fee-based service that provides a cellular connection for both voice communication and online programming for one low monthly fee without any long term contracts.
Cellular service is provided by AT&T 4G LTE where available.

Learn more about DKS Cellular at doorking.com/cellular

VoIP/Ethernet Connections will Register on the DKS VoIP

DKS VoIP is a fee-based service that provides a voice and data connection over the internet from your Entry System to enable voice communication and online programming.
