

Rothco M-65 Field Jacket

The M-65 Field Jacket from Rothco was made to military specifications (The M-65 was implemented by the U.S. Army and US Marine Corps in 1965) and is designed to provide unparalleled warmth, durability, and comfort in any cold weather condition. Originally made for the US military, the M-1965 field jacket's design comprises of a water repellent cotton/poly outer shell for protection from wind, rain and other outdoor elements, and a removable poly quilted liner for added warmth. The military coat features a concealable drawstring hood that can be easily stored inside the collar through the brass zipper closure. The collar includes hook and loop fields as well, so you can fully close the collar to keep your neck warm. Store any essentials in the four single snap button pleated bellow cargo pockets; two are located on the chest, while the other two are located on the waist. To keep outdoor elements out and allow you to stay warm, the Army fatigue jacket comes with a sturdy heavy brass zipper closure with a six-button storm flap cover. The military-style jacket includes hook and loop wrist cuffs and internal hook tabs, which allows you to properly cinch the jacket's sleeves with a pair of gloves by attaching the hook tabs onto the gloves, then closing the sleeves with the hook and loop cuffs. Perfectly made to Government specifications, Rothco's M-65 Jacket is the perfect jacket to take with you on your next trip into the great outdoors.
