

## Rothco Tactical Assault Panel

The Tactical Assault Panel (TAP) is one of the most versatile additions to your military and tactical gear with multiple MOLLE straps and pockets for gun magazines, knives, and other essentials. You can wear the Army TAP chest rig on its own with the adjustable harness or attach to your tactical vest or plate carrier system with the split bar side release buckles and shoulder adapters. Constructed with Cordura nylon material, the assault panel is designed with the utmost resiliency. 8 front pockets with hook and loop straps are ideal for storing your gun magazines with the end pockets providing extra room to store a GPS, radio, or additional magazines. You can attach additional MOLLE (modular lightweight load-carrying equipment) compatible gear to the 3 rows of MOLLE straps on the front panel of the military chest rig. The back panel contains 3 large mesh pockets (left and center are hook and loop, and the right is zippered) ideal for storing a map, compass, and other tactical accessories.
