

## STEP 1

Place the parts on the floor, preferably on a carpet, blanket or other soft surface. Lay three of the legs side by side with holes facing up.

## STEP 2

Start with securing the middle leg to the shelf by mounting the screw and bracket into the hole. Using the ball end of the hex-key, tighten the screw until firmly connected with the leg.

## STEP 3

Repeat step 2 for all the rest of the legs on one side.

## STEP 4

Repeat step 3 for the next shelf.

## STEP 5

One by one, place the remaining three legs on the shelf, line up the holes and tighten the screws.

## STEP 6

Now you can stand the shelf on its legs. Gently wiggle the shelf so that the connections can settle. At this point it is good to go through and re-tighten the screws to be sure everything is tight.
