

# Fitting your Screen Protector

1. Assure all surfaces are clear of dust
2. Clean device using alcohol wipes or methyated spirits
3. Peel back backing of screen protector
4. Using a fine spray bottle spray a VERY light amount of water onto the sticky side of the screen protector, if you apply too much water you can shake this off the protector and reapply  
**\*\*Please note we will not be held responsible for damage caused to your device by applying too much water, it is very important that you only use a fine misting of water!\*\***
5. Starting from the end that feels comfortable to you lay the protector onto the device and slowly squeeze out water towards top and bottom using a squeegee or old credit card, use paper towel to soak up excess water making sure it does not go into device at buttons/selector knob
