

Polespear Band Installation instructions

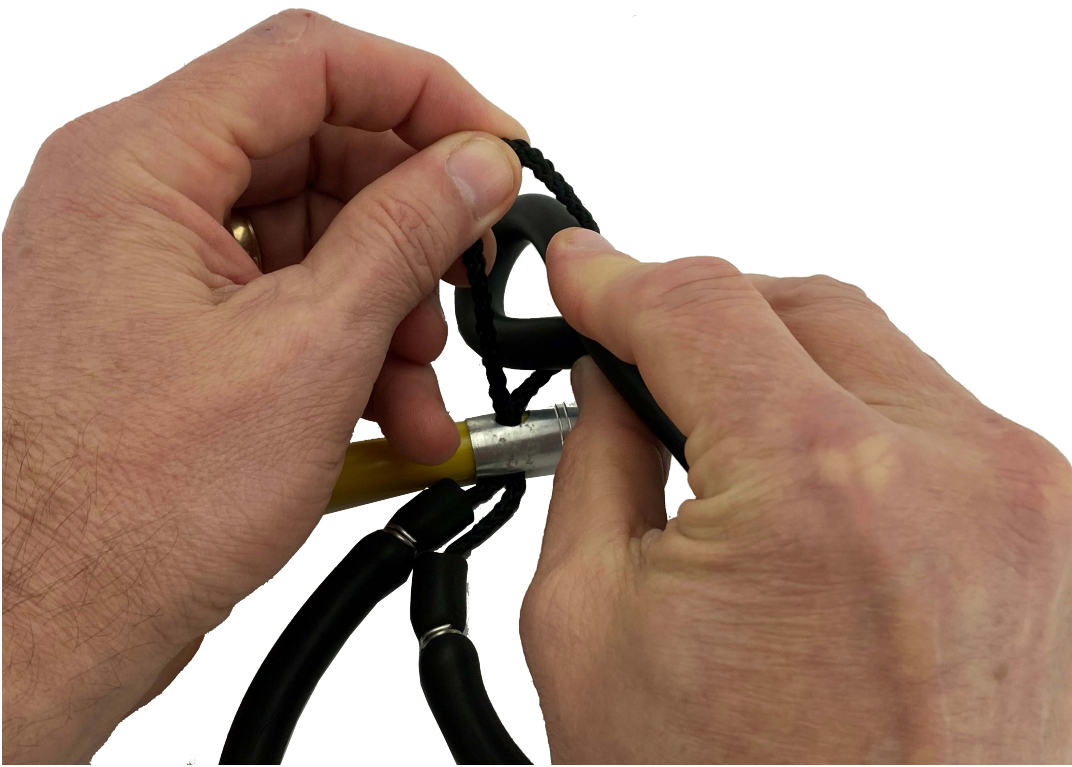

Step 1: Prepare wishbone (cord) on band for installation. Flatten the loop as tight as possible for insertion through hole on butt end of polespear as shown.

Step 2: Insert a small length of dyneema, string, or a bread tie through the hole at the butt end of the polespear as we have done here. Prepare to thread the bread tie back through the hole in the polespear.

Step 3: With the replacement band's cord captured by the bread tie, thread the bread tie back through the hole on the butt end of the polespear. Pull the bread tie along with the cord all the way through the hole.

Step 4: With the cord pulled all the way through the hole in the polespear, take the latex band and thread it through the loop on the cord as shown.

Step 5: Continue to pull the latex band all the way through the cord loop cinching the cord and securing the band to the polespear. Your band is now secure and ready for action.
