BREEZE THROUGH YOUR NEXT ADVENTURE

ICE S AIR CONDITIONERS

You don't have to miss out on holidays throughout Australia just because heat and humidity might make your stay unbearable.

Telair, one of Europe's Premier Brands', range of Air Conditioner's will make your days pleasurable and relaxing. A sense of wellbeing will accompany you throughout your holiday, with the system constantly cooling, heating and controlling the air temperature of the air inside your motorhome or caravan.

Telair's flat and aerodynamic roof-mounted air conditioner's are the perfect solution, taking up minimal space inside the vehicle. The ICE S diffuser's modern super-flat design (just 4.2cm thick), saves space while still looking sleek.

Fitted with an efficient and silent system for distributing cold or hot air that can reach any part of the vehicle. The two main outputs are connected to an adjustable flow separator that allows air to be distributed in two directions (front-rear) or allows the flow to be adjusted gradually until it is all concentrated in just one direction. The two outputs can also be oriented up and down to maximise comfort.

Diffuser includes an LED display that indicates function from heating/cooling status to room temperature — allowing you to always be in control. Additional LED light strips produce a soft, ambient lighting in your caravan or RV.

RECOMMENDED VEHICLE SIZE

Both ICE S 2800 and ICE S 2400 (releasing 2023) models are specially designed to be installed on the roofs of most caravan and RV sizes from small (3m) to large (7m). Special care has been taken to ensure there is low noise both inside and outside the caravan. Suitable for roofs 30–70mm thick.

To determine which model is needed, check length of vehicle and match to below table:

ICE S 2800	10–20ft	3–7m
------------	---------	------

FEATURES

HEAT PUMP—High-efficiency heat pump is effective for outside temperatures down to 0°C.

AUTOMATIC CONTROL—The AUTO function selects the speed and temperature automatically.

REMOTE CONTROL—Infrared remote control with large display & programmable timer.

ANTI-FREEZE PROTECTION PROBES—Protects your air conditioner from freezing over.

INTERNAL FILTERS—Honeycomb filters are easily changed and removed for washing.

FITS MOST CARAVAN & RVS—Suitable for roofs 30–70mm thick.

TOP-LOADER WASHING MACHINES

Forget trying to scrounge up coins for the communal laundry with this compact top-loader that fits right into your caravan or RV.

Aussie Traveller's new range of top load RV washing machines are now available, adding to the ever-growing range of Aussie Traveller RV and caravan specific products.

Featuring 2.5kg and 3.2kg capacity models, all Aussie Traveller Washing Machines are top loading 240 Volt (240V) cold water inlet with left hand or right hand water outlet choice. They also feature lint filter, water inlet filter, a stainless-steel wash drum and full wash cycle choices. Choose from rapid wash all the way to a full cycle wash.

The Aussie Traveller washing machines also contain a carry basket, that also works as a drum stabilizer, and full rubber hose assembly.

These compact washing machines are a great addition to your vehicle as they are lightweight, the 2.5kg weighs 17kg and the 3.2kg model weighing 18.5kg.

FEATURES

- Cold water wash
- Full wash cycle range
- White body profile with grey frosted top lid
- Easy to read display
- Full range of spare parts available
- Includes carry basket

SOG VENTILATION

The simple and highly effective solution to unwanted smells inside your caravan or motorhome - the SOG ventilation system.

The SOG Toilet Ventilation System is an ecological solution for motorhome and caravan toilets. It is 100% chemical free and 100% odourless.

Additives and chemicals are no longer necessary with the increased flow of oxygen guaranteeing optimal decomposition. Thanks to the lack of chemicals you will more freedom when travelling around Australia since you won't need a chemical dump point.

This system is available for all popular 12V Thetford and Dometic cassette toilets, as well as for permanent black water tanks. Choose from standard side, roof or floor venting models, all designed to match your existing cassette toilet.

Featuring a fast and powerful ventilator that immediately removes odours caused by suction. The ventilator is switched on as soon as the blade valve starts to open and is switched off again when the blade valve is closed. The exhaust ventilator with its motor has been specially designed for sanitary systems with its low power consumption, just 0.43W.

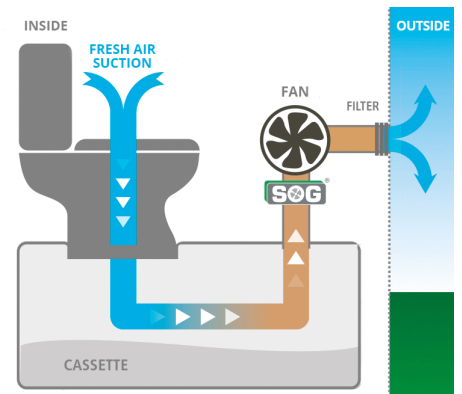

No smells can leave the waste holding tank as soon as the ventilator is switched on. There is a suction effect in the waste holding tank which draws in fresh air through the blade valve. This down-flow acts as a seal and prevents the gases and smells from rising. The fresh air that is drawn in removes the new odours in the toilet bowl when it is being used.

The SOG system does not require any special toilet paper, in fact ordinary toilet paper is recommended. The decomposition process for sewerage and toilet paper is accelerated by the increased flow of oxygen so that no additional chemicals are required.

Made with the traditional German engineering and know-how, this solution to a smelly problem will be an investment in quality of lifestyle.

FEATURES

- 100% chemical-free
- 100% odour-free
- Removes odour from the vehicle
- Fast & powerful ventilation system
- Optimal decomposition
- Low power consumption
- Works with ordinary toilet paper
- Suited to cassette toilets & black water tanks
- Can be retrofitted to existing Thetford toilet systems without the need for an auto-electrician

For full specifications and pricing see our website. For trade & wholesale pricing please speak to one of our sales reps.

BRISBANE SHOWROOM: 11-15 Oasis Court, Clontarf QLD 4019 | MELBOURNE SHOWROOM: 235 Barry Road, Campbellfield VIC 3061

SPECIFICATIONS

SOG DOOR VENT

- The ventilator is mounted directly inside the service hatch.
- The case containing the active charcoal filter is fitted on the exterior.
- The Door Vent SOG unit is the easiest to mount.
- The attractively designed plastic case is available in the colours white, light grey, dark grey and black and can also be painted the same colour as your vehicle.

SOG II FLOOR VENT

- The SOG®II offers the advantage that the filter cartridge can be stored in a wide variety of different locations in your camping vehicle and ventilated through the floor of the vehicle in any position (e.g. in the garage, under the seat, in the double floor or in the storage compartment).
- A hose or pipe extension (up to 3m away from the toilet) can be attached both in front of the compact system and to its floor outlet in order to find a suitable position.
- If you have a caravan in which your toilet's service hatch opens out into the awning, the SOG®II floor model is the ideal trouble-free solution for you.
- Can also be used in awning areas without any problems.
- No changes to the exterior wall of your recreational vehicle.

SOG ROOF VENT

- The roof vent model gives users the option of ventilating our SOG® systems through the roof. The waste holding tank is connected to the roof outlet by a pipe.
- The high-performance fan is installed directly under the roof outlet and provides sufficient negative pressure, even in the case of pipes that are up to 3m long.
- The roof ventilation system is maintenance free because no filter is needed.
- Given that some aspects of the retrofitting process are extremely complex, this model is mainly installed by manufacturers as original equipment.

CHACOAL FILTER

- An important constituent part of the SOG and SOG II is activated charcoal. This is made in a very environmentally-friendly way from organic materials such as peat, nutshells and sugar. This mainly consist of carbon (mostly >90%) with a highly porous structure.
- The pores are connected to one another as in a sponge (open-pored). Active charcoal is used as an adsorption material in, among other applications, the chemical and medical industries, for the treatment of water and waste water, and in ventilation and air conditioning systems.
- Ensure that the filter is changed regularly, after **ONE YEAR**, to avoid unpleasant smells from the vehicle.
- Long working life (1 year)
- Complete neutralisation of odours due to seamless processing
- No formation of charcoal dust
- Low weight & compact size

RV & MOTORHOME RANGEHOODS

Remove any unwanted odours and fumes from your kitchen quickly and efficiently.

Aussie Traveller introduces our first range of RV Rangehoods suited to the caravan and motorhome industry. With 3 models to choose from, there is a rangehood to suit your application.

The front panel surface mount rangehoods are available in two sizes, standard 530mm wide or the compact space saving 380mm wide models. Both feature tempered glass touch control face, digital display, 3 speed twin extractor fans, washable filter, twin LED lights, stainless steel body with rear or top air outlet. Our 380mm version is perfect for the smaller kitchenette within any RV.

The flush mount version comes with a 465mm wide body, easy-access tempered glass touch control front display, digital display, 3 speed extractor fan, washable filter, twin LED strip lights, stainless steel body and rear air outlet.

All the Aussie Traveller Rangehoods come with a 12 month warranty, full range of spare parts and are easy to install.

For dimensions, please see next page.

FEATURES

- Tempered glass touch control panels
- Digital displays
- Twin LED lights
- Stainless steel body
- 3 speed extractor fans
- Washable filters
- 12 month warranty

TRAVELCLOUD CARAVAN MATTRESS

The TravelCloud mattress combines the support you need with the comfort of resting on a cloud for a perfect nights sleep.

The TravelCloud mattresses are high quality, pillow-top or standard mattresses with styles with a removable zip bolster or no bolster, bonnell springs, 3cm high density, soft foam to create the pillowtop, 400g cotton padding with a strong side boarder to ensure that mattress won't collapse like other caravan mattresses.

Specifically designed with the traveller in mind, the bed base features a retractable bed base end that offers extra leg room when fully extended, strong birch wood bed slats, 4 piece hinge and two 450nM bed struts.

The combination of the Aussie Traveller bed base and TravelCloud mattress will make travelling a joy.

FEATURES

- Luxury support and comfort
- High density soft foam pillow-top
- Breathable quilted fabric
- Removable pillow top bolster style
- Standard and pillow top styles without bolster also available
- Hinged and retractable bed base
- Extends for extra leg room
- Spacious RV queen size
- Bed base struts sold separately
- Full range of bed base spare parts also available
- 5 year warranty (*on mattress only*)

Extends for extra leg room.

Removable pillow-top bolster style.

THULE ROOF VENTS

Thule Vents provide a practical solution for fresh air and ventilation as an ideal alternative to an air-conditioner.

The aerodynamic design for the Thule Vents means you no longer need a spoiler on your vehicle.

On both manual and electric operations, the roof light is mounted with special clamps so drilling is not needed, except for the opening itself. These Thule Vents come with a blackout roller blind and an easy to clean, removable mosquito screen as standard.

The Thule Vents are available in White or Translucent colourways to give maximum light to the interior of your caravan. Featuring a white roller blind that can be rolled up in 3 phases, set inside a cream inner frame. All Thule Vents have quick and easy clamp style fitting.

The Manual models can be easily upgraded to the Electric models at a later date with the addition of the 12V Ventilator.

The Electric 12V model combines the Thule Vent with a motorised ventilator to provide fresh air and ventilation instantly. A simple press on the button of the control panel adjusts the speed and rotation direction. Plus, it is silent and extremely low on energy consumption. Maximum ventilation is 20m³/min.

On the Electric models in addition to 12 adjustable ventilation speeds, the Thule Vent has an energy-saving function, a boost function and a safety mechanism to guard against excess voltage, incorrect connection and blockage. It also features a touch control panel with LED indication. The ventilator boost function returns to its original speed after 5 minutes is ideal in toilets or bathrooms.

FEATURES

- Easy installation without drilling
- Aerodynamic shape
- All materials are made of impact and weather-resistant plastics
- Adjustable ventilator speed on electric models
- Roof thickness: 25–40mm, 40–60mm with additional fitting kit
