PRODUCT INFORMATION

ACRYLIC GOLDSIZE

Description

A waterbased clear size for gilding gold and other metal leaf. Unlike traditional solvent based goldsizes that obtain a whistling tack and then have a time frame when the gold must be applied, this waterbased clear will remain tacky for an indefinite time. This feature allows no time limitation for gilding a specific area. However the tacky exposed size will attract dust and this should be considered before gilding. The size can be tinted with universal tinters.

Application

Thoroughly stir and apply the size **evenly** with brush, roller or spray onto a clean surface.

Drying

Under normal drying conditions (15°C and low humidity) the size will become tacky and permanent after about 1 hour and is then ready to gild. The time does depend on temperature and humidity. If in doubt allow longer dry times.

Cleaning and Thinning

Water

Coverage

Approximately 14 square metres per litre per coat.

Pack Size

200 mls, 500 mls, 1 litre and 4 litre plastic bottles.

Testing

The use of waterbased sizes is relatively new to the art of gilding. As the methods and conditions of application and use of this product are beyond control of Vipond's Paints Pty. Ltd. it is recommended that the customer tests the product thoroughly for their own particular application.
