## PRODUCT INFORMATION

### GRASSMARKING PAINT

#### **Description**

A water based paint formulated to be applied onto grass. The resin and pigment system has been carefully selected to minimize the chance of harming the grass.

#### **Use**

For line marking and painting signs on grass.

#### **Application**

It is important that the paint sit on top of the grass and not penetrate into the soil. The paint is very thick and can be reduced with water to the desired viscosity. Upto 1 part paint to 5 parts water. The paint should be applied in thin coats allowing approximately 30 minutes between coats.

Apply with brush or broom, spray and grass line marking machines.

#### **Drying**

The paint will dry when the water evaporates and therefore the time will vary on the amount of water added and the weather conditions. Ideal temperature is above 15°C with low humidity. Do not apply in wet and cold conditions.

#### **Warning**

Paint should only be applied to healthy grass. If the paint is applied to new grass or diseased grass then the paint may cause the grass to die.

Continuous painting of the same area of grass could also result in the grass dying, particularly if the paint is applied heavily.

#### **Pack Size**

4 litre and 20 litre

#### **Colours**

Black, white, safety yellow, red and blue and customer specifications.
