PRODUCT INFORMATION MATTING AGENT

Description

Vipond's Matting Agent is an additive that is added to alkyd enamels to reduce the gloss level. It is effective in any enamel paint that can be reduced with mineral turpentine, such as Vipond's Feature Gloss Enamel, Vipond's Paving Paint and Vipond's Quick Drying Enamel.

By varying the additions of matting agent, the degree of gloss can be reduced from a high gloss to a low sheen according to the following mix ratios.

Satin Finish

Add 500mL matting agent to 4L of paint.

Low Sheen Finish

Add 1L matting agent to 4L of paint.

Preparation

Select a container large enough to mix the paint and matting agent together. Thoroughly stir the matting agent with a wide flat stirrer, then mix with the paint and stir until it is of a uniform consistency.

The paint is now ready to use.

Follow the instructions on the paint label for surface preparation and application.

Note: the addition of matting agent will thin the paint, therefore application properties will change. In most cases, it is advised to apply an additional coat for optimum durability.

Pack Size

250mL, 500mL, 1 litre and 4litres.
