

Super Buflex

FLEXIBLE POLISH SANDING SYSTEM

Achieving a showroom finish in a fraction of the time has never been easier

Super Buflex is a revolutionary total dry system that **cuts buffing times by 50% or more**. Achieve a more uniform and shallow scratch pattern that is much easier to polish out than conventional fine finishing abrasives.

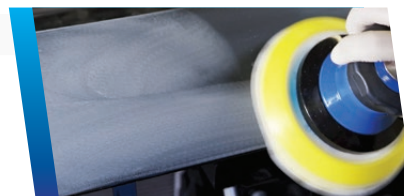

REPLACE COMPOUND BUFFING

Fewer messy buffing compounds needed as a result of a super uniform finish that can be polished in a fraction of the time.

TOTAL DRY POLISH SANDING

Revolutionary anti-clogging technology enables total dry sanding without sacrificing paper life or a uniform finish.

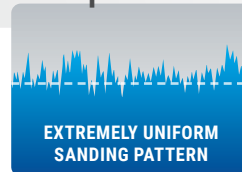

IMMACULATE UNIFORM FINISHES

Advanced "Roller Coating" process uniformly distributes abrasive grains with the ultimate precision, minimizing deep irregular scratches and pig-tailing.

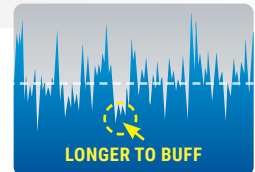

Reduce your buffing process by 50% or more with Super Buflex

Super Buflex cuts fast, but leaves behind a shallow finish. Easier to polish to shine than conventional grit 3000. No water needed, easy clean-up. Easy progress monitoring with the wipe of a towel.

Super Buflex

CONVENTIONAL P3000

When compared to equivalent grit abrasive papers, Super Buflex not only delivers a shallower scratch pattern, but also one that is more uniform.

THE TOTAL DRY SYSTEM

Super Buflex, like all Eagle Hi-Tech products, is manufactured with a special flexible bonding paired with an extremely effective anti-clogging agent. This flexible bonding allows the cutting stones to conform with the surface for a more shallow and uniform finish.

Super Buflex uses **SUPER-TACK** (Hook & Loop)

GETTING STARTED WITH SUPER BUFLEX

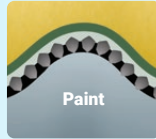

Available in Sheets & Discs

1 TOP-COAT SANDING

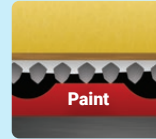

Prior to using Super Buflex, we recommend the following topcoat sanding solutions to achieve the best finish in the shortest time. Take advantage of a Total DRY system that results in reduced labor times.

MATCH TEXTURE

Use **Buflex Green K-2000** when matching OEM texture is a priority. Hi-Tech flexible bonding technology polishes both the peaks and valleys, eliminating minor imperfections without completely altering surface texture. For heavier imperfections or surface texture, try **Super Assilex Peach K-1500**.

BLOCK TEXTURE

For more aggressive blocking and flattening of heavy orange peel or other surface defects and imperfections, use **Yellow-Film** discs. For spot repairs, use **Tolecut** sheets or discs.

3 FINAL POLISH

Due to a combination of Buflex's fast & uniform cutting action and shallow scratch pattern, the time required for buffing after top-coat sanding can be largely reduced. Finishes can now be polished to a showroom shine in a fraction of the time normally required.

Buff with Polax 1-Step Polishing Compound

2 CHOOSING BUFLEX DARK OR LIGHT FINISH?

BLACK K-3000 ← **GREEN K-2000**

Black or dark colored finishes make imperfections more visible and should utilize both Buflex Green & Buflex Black for the ultimate finish.

← **BLUE K-2500**

White or lighter colored finishes can go straight to the final polishing stage after sanding with Buflex Blue.
