bamboo: the fastest growing plant in the world

MOSO[®] bamboo solid & supra collection

With MOSO[®] Bamboo Panels, Beams, Veneer and Flexbamboo, you can create a **beautiful interior** made of naturally-grown bamboo. Our Bamboo Solid and Supra Collections offer **multiple solutions** for your interior projects, such as: **furniture, worktops, window and door frames, kitchens, doors, stairs or wall and ceiling coverings**. Be inspired and introduce **bamboo** to your **interior!**

beautiful ⁷

Enrich your interior project with MOSO® Panels, Beams, Veneer and Flexbamboo. Whether you desire a decorative or structural solution, there are numerous possibilities for each application. Similar to wood, the final look can be determined with many different finishes.

durable & stable

Thanks to the composition of individual bamboo strips and the positioning and direction of each layer in multiply products, MOSO® Bamboo Panels and Beams will shrink and swell less than most solid wood species, providing more stability. With a hardness and density similar to or better than the best hardwood products, they are even suitable for use in heavy duty applications. MOSO® Bamboo Products are engineered to last a lifetime.

versatile

MOSO® Bamboo Panels, Beams, Veneer and Flexbamboo are available in different colours and textures, and in various sizes. Depending on the finish or surface treatment, you can define your own style, just choose the one you like most! MOSO® Bamboo Products can be used for custom made furniture, worktops, window and door frames, kitchens, doors, stairs, wall and ceiling coverings and many more applications.

well made

Moso bamboo is one of the fastest growing plants on earth. The bamboo stems grow from an underground root system. After 5 years a stem can be harvested, while the younger stems continue to mature. Each year new stems sprout from the root system. This means that the bamboo can be used without destroying the forest. After harvesting, the Moso bamboo stems are split and the inner and outer skin are removed. The strips naturally have a light yellow colour (natural), but can be steamed to obtain a light brown colour (caramel). After treating and drying, the strips are ready to be processed in several ways to make the final product:

assembly of strips:

Plain Pressed

Strips are placed horizontally and glued together to create a wide line pattern with the characteristic bamboo nodes clearly visible.

Side Pressed

Strips are placed vertically and glued together to create a narrow line pattern with the bamboo nodes visible in a subtle way.

Flexible

Strips are bonded to a flexible backing, creating a wide line pattern with the characteristic bamboo nodes clearly visible.

High Density*

Strips are crushed, compressed and glued under high pressure, creating an elegant random grain pattern. The result is a product that is even harder than the best tropical hardwood species.

the benefits

hard & durable

With a hardness and density similar or better to the best hardwood products, MOSO® Bamboo Panels, Beams and Veneer are even suitable for use in heavy duty applications. All products are Brinell >4 kg/mm². High Density* is exceptionally hard: Brinell >9.5 kg/mm².

CO₂ neutral

Official LCA and carbon footprint studies (ISO 14040/44) confirm that solid MOSO® Bamboo Products are CO₂ neutral over the full life cycle.

endless resource

Made from Moso bamboo, one of the fastest growing plants on earth. Each stem can be harvested after 5 years, and the plant continues to grow.

high stability

Due to the composition of individual strips and multiple cross pressed layers, MOSO® Bamboo Panels and Beams will shrink and swell less than solid wood species, providing more stability.

healthy

The MOSO® Bamboo Panels, Beams and Veneer have low formaldehyde emissions meeting the E1 Class (EN 717-1) or EO Class.

fireproof

Bamboo High Density* as material has a fire resistance class B-s1-d0, following EN 13501-1 facilitating application in public projects.

multiple solutions

MOSO® Bamboo Products offer multiple solutions for worktops, furniture, window and door frames, kitchens, doors, stairs, wall and ceiling coverings, and many more indoor applications.

beautiful appearance

Creates a beautiful, natural look. Final appearance can be determined with many different finishes.

super flexible*

The intrinsic flexibility of bamboo as a material, combined with lamination techniques provide a unique material with very interesting design opportunities such as curved forms.

* only for MOSO® Veneer / Flexbamboo

MOSO® Solid Collection

MOSO® offers a very **broad assortment** of solid bamboo panels and beams in **various sizes, thicknesses, colours** and **textures**. These products have been used worldwide in various applications, including **door and window frames, stairs, curtain walls, furniture, kitchens** and **doors**.

MOSO® bamboo solid panels
multilayer boards

Madrid International Airport with 200.000 m² bamboo ceiling

MOSO® custom made

One of **MOSO's strengths** is to translate **specific market** needs into bamboo products. Together with **various clients**, MOSO has co-created **unique bamboo solutions** for different industries, including green building industry, automotive, furniture and kitchen industry, consumer goods, and livestock stables.

Madrid Airport
ceilingboard

"The ceiling consists of 100 mm wide planks of multi-layer MOSO® Bamboo Veneer. The visual qualities of this material imbue T4 with its very special character. Bamboo has the added benefit of being very sustainable."

Simon Smithson, lead architect of International Airport Madrid, partner at Rogers Stirk Harbour + Partners

REINÆRDT
doors

"With the MOSO® bamboo framework in the doors, we can offer our customers not only a significantly better CO₂ balance, but also better quality thanks to increased stability and thus a long life expectancy."

Robert Haven purchase manager REINÆRDT

Doitrand Equestre
horse stable

"Quality, solidity and aesthetics are the three words that best describe MOSO® Bamboo Boards. Thanks to MOSO, we are sure to provide our customers an elegant and durable stable."

Nicolas Doitrand owner Doitrand Equestre

sustainable

MOSO® Bamboo Products offer clear sustainability advantages and are even proven to be CO₂ neutral over the full life cycle! The inclusion of MOSO® Bamboo Products contributes to a higher LEED, BREEAM or Green Star certification score for green building projects. That's one of the reasons why you can find MOSO® Products in many sustainable reference projects all over the world.

► www.moso.eu/certifications

carbon footprint

MOSO® Bamboo Products: CO₂ neutral over full life cycle

MOSO® has commissioned Delft University of Technology to conduct an official LCA and carbon footprint study. The report (www.moso.eu/lca) concludes that all assessed MOSO® Products (all solid bamboo flooring, decking, beams, panels and veneer) are CO₂ negative over the full life cycle ("cradle till grave"). In this result the high growth rate of Moso bamboo (see graph below) has not even been taken into account, and can be perceived as additional environmental benefit. The environmental impact of MOSO® Products, excluding carbon sequestration effect, was also published in an official Environmental Product Declaration (EPD) following EN 15804 (www.moso.eu/epd).

in CO₂ eq/kg
* result depending on MOSO® product assessed.

unsurpassed growing speed

Bamboo: the fastest growing plant in the world

Because of the fast growth, Moso bamboo is managed as an agricultural crop: the annual harvest of the 5 year old stems - compared to 80 years for tropical hardwood! - provides a steady annual income to farmers and stimulates the bamboo plant to reproduce even faster. In contrast to tropical hardwood, there is no deforestation taking place for the production of MOSO® Bamboo Products.

about MOSO

MOSO International was founded in the Netherlands in 1997. Since then, MOSO® is leading in the development of innovative and sustainable bamboo products for interior and exterior applications and became **market leader in Europe**.

There is no other company worldwide with an equally – and still expanding – **broad assortment in high quality** bamboo products. MOSO's head office, with the **biggest bamboo warehouse** in Europe, is located near Amsterdam. Furthermore, MOSO® has offices in Barcelona, Milan, Cape Town, Milford (USA), Dubai and Hangzhou (China). MOSO® works with several partner companies and leading distributors worldwide to **guarantee the availability** of MOSO® products in each region.

Besides MOSO® Bamboo Panels, Beams, Veneer and Flexbamboo, MOSO offers a very broad assortment of **Bamboo Flooring** and **Bamboo Outdoor** products in various sizes, thicknesses, colours and textures. These products are used worldwide in various applications ranging from different types of flooring, stairs, outdoor decking, cladding, fencing, outdoor furniture, shutters and outdoor beams, providing an ideal combination with the MOSO® Solid and Supra Collections.

Furthermore, because of its expertise, MOSO® is able to develop **unique, customised bamboo solutions** for industrial clients, meeting exceptionally stringent requirements. Through its experience, innovative attitude and world-wide network, MOSO® is recognised as the **global A-brand** in bamboo products. The proof is the impressive list of references and clients such as Madrid Airport, BMW, AkzoNobel, Texaco, Guggenheim Museum, Rabobank, United Nations (FAO), and CitizenM Hotels. For an overview of our references and clients please visit our website: www.moso.eu/references.

The mark of responsible forestry
FSC® C002063

MOSO® Bamboo Solid Panel consists of multiple layers of bamboo, available in multiple variations with respect to size, thickness, configuration, style and colour. These bamboo panels are especially interesting in those applications where the side of the panel remains visible, such as steps of a staircase, furniture and kitchen work tops.

¹⁾ Dimensions 3000x700 mm or 4000x620 mm.
²⁾ Tiger: Mix of natural and caramel strips, only available in High Density*.

MOSO® Bamboo Solid Beam may be used in numerous applications such as window- and doorframes, where typically (expensive) scarce tropical hardwood is used. Unlike hardwood, the MOSO® bamboo solid beam is a very regular material in terms of stability and structure (no knots, no resins coming out) and is therefore easy to process.

Other dimensions are available on request.

MOSO® Bamboo 1-Ply Panel is mainly used as a panel covering material, where the bamboo is pressed, double sided, on a base (for example MDF or chipboard). Most applications require pressing on both sides of the base, to prevent possible bending. The result is a "sandwich panel".

MOSO® Bamboo Veneer is a high quality veneer, which is created by slicing sheets from laminated blocks made from bamboo strips. To avoid cracks during handling, MOSO veneer is backed with a thin, but strong cellulose fleece. This facilitates easy pressing of the veneer sheets on a panel.

³⁾ The hardness of veneer dependent on the substrate used.

MOSO® Flexbamboo is a flexible bamboo product often placed on a carrier (e.g. MDF) and used as an aesthetic covering material on walls, ceilings, or furniture.

⁴⁾ Only available in 2440 mm width.

^{*)} Flexbamboo not available with FSC® certification.
