

Animal Facts! - Monkeys

These facts belong to:

Write your name above

- There are currently 264 known monkey species.
- Some monkeys live on the ground, while others live in trees.
- Different monkey species eat a variety of foods, such as fruit, insects, flowers, leaves and reptiles.
- A group of monkeys is variously called a troop, barrel, carload, cartload, or tribe.
- Monkeys can understand written numbers and can even count.
- At the tip of a monkey's tail is a patch of bare skin that acts similar to a human's fingertips. It is sensitive to touch and also has tiny ridges that gives the tail a better grip.
- While monkeys and apes are related, they are very different from each other. Monkeys have tails, have snouts, and they are not as intelligent as apes.
- Monkeys are found almost everywhere on Earth, except for Australia and Antarctica.
- A howler monkey's howl can travel three miles through dense rainforest.
- Monkeys have long, powerful tails. They use them for balance, vertical leaping, and they are able to hang upside down from trees for long periods of time with them.
- Some species of Monkeys can see in color while others can only see in black and white.
- All Monkeys have opposable thumbs that help them with climbing and getting to food sources.
- Monkeys will never get the common cold.
