ZURICELL'S TECHNOLOGY

Zuricell

Skin environment improvement

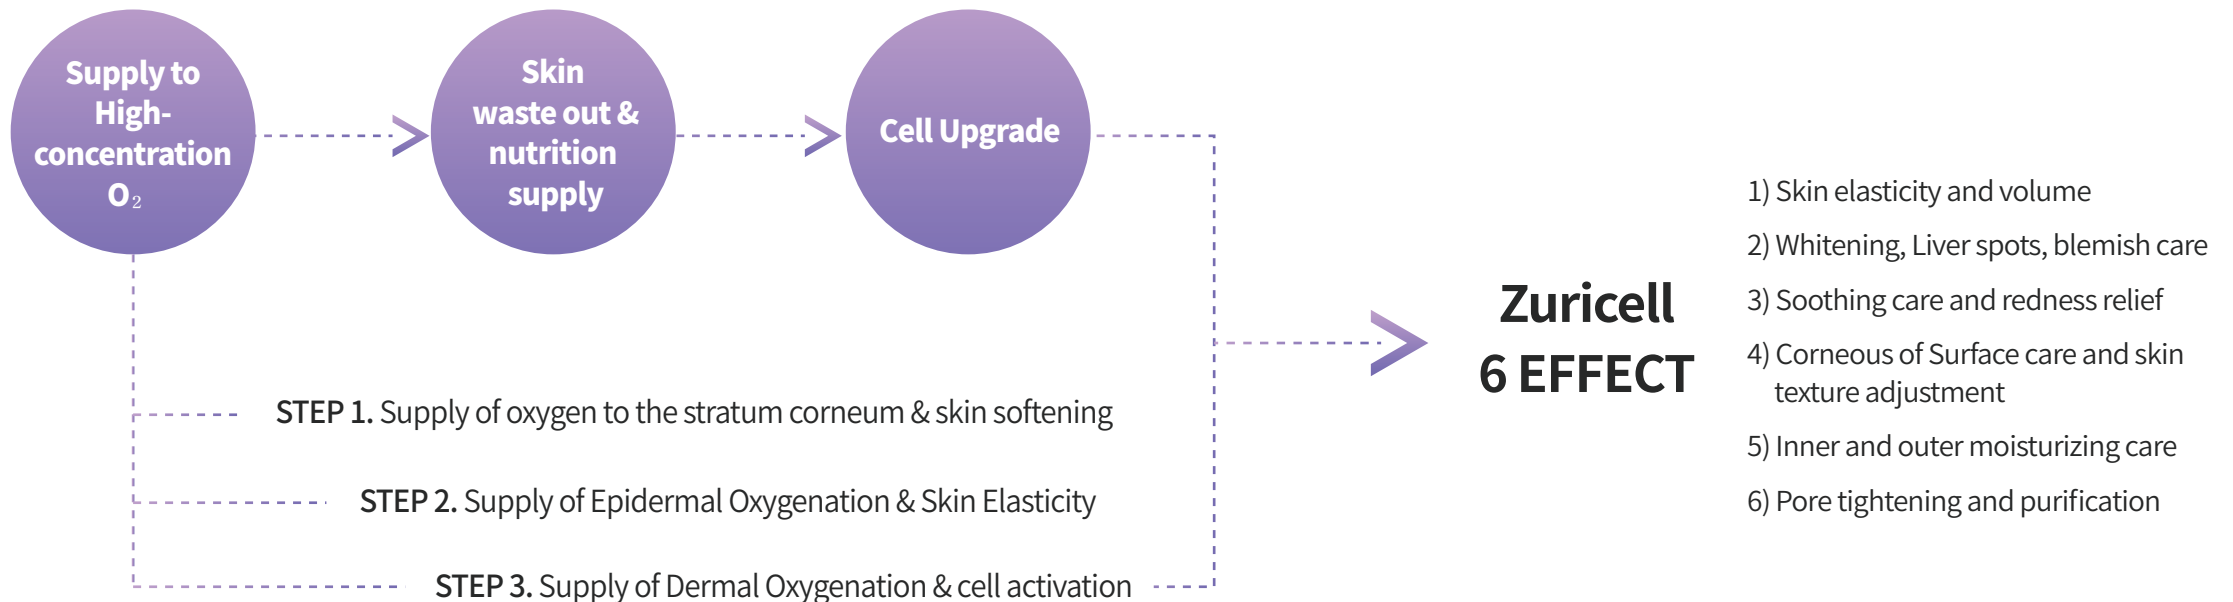

In an environment where active ingredients cannot be absorbed, it is difficult to activate skin cells even if active ingredients that are good for the skin are applied to the skin.

Supplying O₂ & negative-ion to create a skin environment that can accept active ingredients is the first step in skin care.

ZURICELL'S TECHNOLOGY

Supply to skin cells up with high-concentration oxygen

By supplying high-concentration oxygen and negative-ion to the skin, it activates the skin and discharges all wastes. Upgrades skin cells by supplying nutrients to emptied skin cells.
