

0701 Electro-Optic Modulator

IM-1550-12-B

1550 nm, 12 GHz Compact Intensity Modulator

IM-1550-12-B is a 12 GHz intensity modulator, incorporating a zero-chirp design for ultra long haul transmission. Covering full C-band and L-band, it can be used for any ITU grid DWDM channel, with exceptional E/O bandwidth and a highly linear transfer function. Applications include digital transmission up to 15 Gb/s, analog RFoF transmission to 12 GHz, optical pulse generation, and microwave optical link. The IM-1550-12-B operates with standard drive voltage, making it compatible with a wide variety of modulator drivers, and a diplexed bias port allows the modulator to operate at specific points of the transfer function. Supplied in a hermetic package, qualified to Telcordia™ GR-468-CORE, this product assures high reliability and performance at all times.
