

# LUMBER LENGTH GUIDELINES

2x4 lumber is commonly available in 8', 10', 12', and 16' lengths, and can be found as long as 20'. Here's how to use 2xEDGE with various lengths of lumber.

- Install one 12" from each end of your 2x4
- Install at the midpoint of each 2x4
- Install additional 2xEDGES as needed for support

**Up to 6'** → one 2xEDGE installed at the mid-point

**8' to 10'** → two 2xEDGES installed 12" from each end

**12' to 16'** → three 2xEDGES: install one centered, two 12" from each end

**20'** → four 2xEDGES: install two 12" from each end, two evenly spaced in between

Guides, videos and instructions are available in the how-to section of [2xEDGE.com](http://2xEDGE.com). Come on by!
