

"The decision to grow for ourselves was made quickly!"

by Brian:
Hedonist
& Grower

	Cultivation period in weeks	Light / Day in hours	Terra Vega ml/10 litres	Terra Flores ml/10 litres	RHIZOTONIC ml/10 litres	CANNAZYM ml/10 litres	CANNABOOST ml/10 litres	PK 13/14 ml/10 litres	EC + in mS/cm	EC Total in mS/cm	
VEGETATIVE PHASE											
GROWTH	Start / rooting (3 – 5 days) - Make the substrate wet	<1	18	15-35	-	40	-	-	0.4-0.8	0.8-1.2	
	Vegetative phase I Plant develops in volume	0-3 ¹	18	30-50	-	20	25	-	0.7-1.1	1.1-1.5	
	Vegetative phase II - Up to growth stagnation after fructification or appearance of the formation of flowers	2-4 ²	12	35-55	-	20	25	20 ⁵	-	0.9-1.3	1.3-1.7
GENERATIVE PHASE											
FLOWERING	Generative Period I - Flowers or fruits develop in length. Growth in height achieved	2-3	12	-	50-70	5	25	20-40	-	1.2-1.6	1.6-2.0
	Generative period II - Development of the volume (breadth) of flowers or fruit	1	12	-	50-70	5	25	20-40	15	1.5-1.9	1.9-2.3
	Generative Period III - Development of the mass (weight) of flowers or fruit	2-3	12	-	40-60	5	25	20-40	-	1.0-1.4	1.4-1.8
	Generative Period IV - Flowers or fruit ripening process	1-2	10-12 ³	-	-	-	25-50 ⁴	20-40	-	0.0	0.4

1. This period varies depending on the species and number of plants per m². Mother plants remain in this phase until the end (6 – 12 months).

2. The changeover from 18 to 12 hours varies depending on the variety. The rule of thumb is to change after 2 weeks.

3. Reduce hours of light if ripening goes too fast.

Watch out for increasing Relative Humidity.

4. Double CANNAZYM dosage to 50 ml/10 litres, if substrate is reused.

5. 20 ml/10 litres standard. Increase to a maximum of 40 ml/10 litres for extra flowering power.

EC: EC+ value is based in mS/cm when EC water = 0.0 by 25°C, pH 6.0

Add the EC of the tap water that is used to the recommended EC!

The EC total in the example is with tap water with an EC of 0.4

pH: Recommended pH is between 5.8 and 6.2

Adding pH+ can increase EC.

Use pH- grow in the vegetative phase to lower the pH

Use pH- bloom in the generative phase to lower the pH

The guidelines in the table aren't an iron law, but can help novice growers to develop a sophisticated fertilisation strategy. The optimum fertilisation strategy is further determined by factors such as: temperature, humidity, plant species, root volume, moisture percentage in substrate, water dosage strategy, etc.
