

MOONWALL: REPLACING CORNER WEBBING TABS

MOON WALL

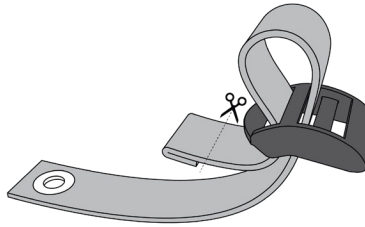

To increase the durability and longevity of your MoonWall, replace the original corner webbing tabs with the replacement corner webbing tabs included with some models of MoonWall. The new webbing tabs have attached looped cordage to more easily and securely stake out your MoonWall without damaging the metal grommets on each corner webbing tab.

Instructions:

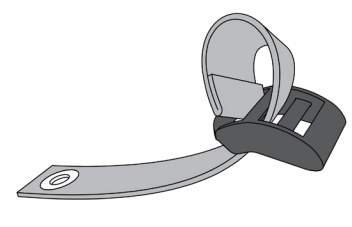

STEP 1

Locate adjustable grommet tabs on corner of MoonWall

STEP 2

Remove one grommet tab by threading the tab through and out of the plastic adjuster. Optional: Cut off stitched end of webbing to remove tab more easily.

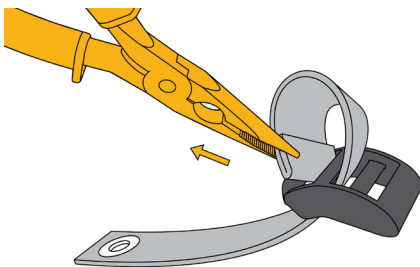

STEP 2

Thread a new grommet tab with looped cordage through the plastic adjuster and into place. Use the existing tabs as a guide if needed.

Repeat on the remaining corners of MoonWall and you're finished!

PRO TIPS:

Needle nose pliers may be helpful in removing and replacing the corner webbing tabs.
