Mechanical Keyboard with Modular Switches

Trying out different switches, replacing old ones, and matching several types of mechanical keyboard switches used to be difficult and required adequate technical skills in order to be done. The GMMK is the world's first mechanical keyboard featuring hot-swappable switches for Cherry, Gateron, and Kailh branded switches.

Ever wonder what Gateron Blue's felt like? Or what is the craze behind the Cherry MX clears? Want to use Gateron Reds for your WASD, but Gateron Blacks for all your other keys? With the GMMK, you no longer have to purchase an entire new keyboard, or disassemble and solder your switches – you can simply pop out the switch just like a keycap, and mix/match to test out and use any combination of switches you desire.

Armed with a glorious sandblasted aluminum face plate, full NRKO, RGB LED back lighting (several modes), modular switches, double shot injection keycaps, and minimalistic design - The GMMK is revolutionizing the mechanical keyboard market, giving users full control without needing the technical experience required by the gurus.

**THANK YOU FOR PURCHASING THE GMMK MECHANICAL KEYBOARD
AND WELCOME TO OUR GLORIOUS LEGION.**

PACKAGE CONTENTS

- GMMK keyboard
- Manual / Quick Start Guide
- Keycap Puller Tool
- Switch Puller Tool
- Glorious PC Gaming Race sticker

SYSTEM REQUIREMENTS

How to change switches and key caps

1. REMOVE KEYCAP

Use the keycap puller tool to clamp on a keycap and pull upwards to detach keycap with switch. Sometimes the switch may come out as well if the keycap is secured tightly on switch, which is normal. For longer keys such as the space bar, always clamp and remove from the MIDDLE of the keycap.

2. REMOVE SWITCH

Use the switch puller to push in the two tabs located on the top and bottom side of the switch. Once they are pushed in, pull upwards to remove switch from keyboard case. Warning: It is very easy to scratch your keyboard case with this tool, so take caution when removing switches!

3. READJUST PINS

When inserting a new switch, first make sure it is compatible (see switch requirements). Inspect the copper pins on bottom of switch and that they are perfectly straight. Sometimes due to shipping, or improper insertion, the pins can be easily bent. The pins can be easily straightened back out with tweezers/ pliers (available via all our switch boxes.)

4. INSERT SWITCH

Align switch to holes on the keyboard, and insert straight down. There should be minimal resistance and the switch should pop into the frame of the keyboard. It is recommended at this time to have a text-editor on your PC open to make sure the switch works when you press it.

You could also set the LED mode on keyboard to REACTIVE MODE (see page 10), and the switch should light up when you press it.

It is safe to swap switches while your keyboard is plugged in to your PC.

If the switch does not light up, or register a key on your PC when you press it then the switch was not inserted properly. Remove switch, and make sure pins are straight then insert again.

5. INSERT KEYCAP

Once you have confirmed the switch was properly inserted, snap back in the appropriate keycap.

Mechanical Switch Requirements

The GMMK is designed to work the following switch brands: Cherry, Gateron, Kalih. We currently sell Gateron compatible switches on our website.

Although other brands of switches will fit, they may be loose or have a tighter fit than normal. There are several types of Cherry/Gateron/Kalih switches available.

These are the specific requirements for the type of switches that are compatible.

SWITCH REQUIREMENTS

CHERRY / GATERON / KALIH BRANDED

Zealio switches also work (plate mounted). Other brands may be compatible but their fit on the keyboard may vary.

SMD LED COMPATIBLE SWITCHES

This is optional if you want to have the backlight function, as a non LED switch would block the light. Non LED switches can be modified by user to support SMD LEDs. For the best LED performance, a SMD-LED such as the ones made by Gateron are recommended.

The GMMK keyboard is also compatible with our software to tweak your keyboard to your needs. In order to unlock the 16.8 million color palette your keyboard can display, you must configure it via software. Profiles and custom macros are also now available via GMMK software.

To download the latest GMMK software go to:

<http://www.pcgamingrace.com/gmmk-software> (*compatible on Windows only*).

Instructions with how to use the software are included at download link above. You do not need the software to use the GMMK keyboard, or to do basic customizability.

They RGB lighting on the GMMK can be customized via software or on keyboard. More customizability is available via our software. Below are all the commands on how to customize the GMMK via commands.

CHANGE LED ANIMATION SPEED

Note: When Caps/Num/Scroll lights are blinking then you have reached the minimum or maximum speed

CHANGE LED BRIGHTNESS

Note: When Caps/Num/Scroll lights are blinking then you have reached the minimum or maximum brightness

CHANGE LED BACK LIGHT COLOR (8 OPTIONS)
