MAGNETIC SLIM FILTER

Put on and off in an instant—anytime, anywhere, don't miss precious moments

Instant On! Magnetic Operations

A permanent magnet with a strong magnetic force.
A6063-aluminum-alloy-frame with high strength and excellent corrosion resistance.
"Magnetic Slim Lens Adapter" or "Magnetic Slim Lens Protect/Adp." is required to be first mounted to your camera lens.

If you're screwing in the filter, you may sometimes miss your chance for a quick shutter!
Exquisite attachment/detachment feelings in spite of strong magnetic force!
Since it does not need to be screwed in, it becomes dirt and scratch resistant.

Free yourself from the stress of misalignment of screw-in and over-screwing!

Ultra slim design

This thin, even when stacked!

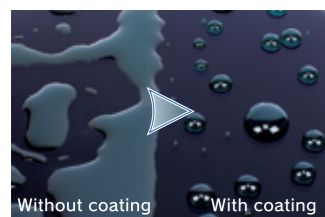

Magnetic Slim filters

Conventional filters

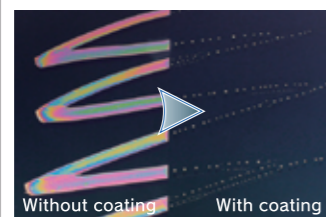

Coatings that increase convenience

Water repellent coating
Even when shooting near the waterfront or in the rain, the lens repels water droplets for stress-free use.

Without coating With coating

Oil repellent coating
This coating prevents fingerprints from sticking to the surface, and even if it does, it can be easily wiped off and is scratch-resistant.

Without coating With coating

Slim but high-strength filter

A6063-aluminum-alloy-frame with high strength and excellent corrosion resistance

Tempered glass processing is applied to the ND and the Lens Protect/Adp. Filters.

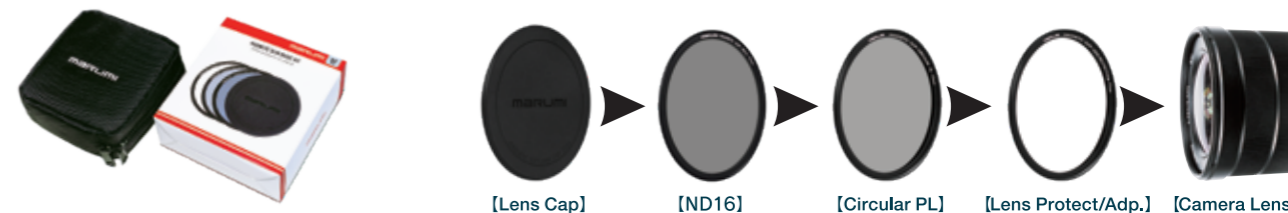

New Lineup!

Magnetic Slim Basic Kit

A set that allows easy basic filter replacement

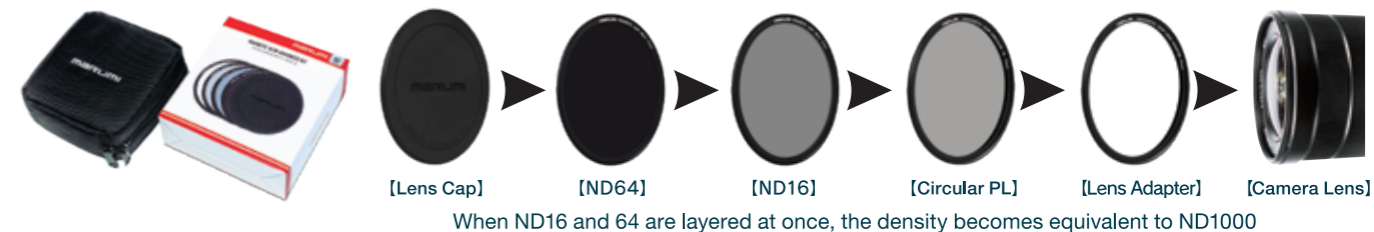

Based on the Magnetic Slim Lens Protect/Adp. directly attached on the camera lens, C-PL and/or ND filters can be attached/detached.

Magnetic Slim Advanced Kit

A complete set that allows you to enjoy a wider range of expression

Based on the Magnetic Slim Lens Adapter directly attached on a camera lens, C-PL and/or ND filters can be attached/detached.

When ND16 and 64 are layered at once, the density becomes equivalent to ND1000

When three filters are layered at once, vignetting may sometimes happen. The C-PL and ND filters cannot be directly attached to a camera lens.

Circular-PL

Since the Circular PL is also a magnetic type, it can be rotated even with a single frame and becomes compact.

Without C-PL filter

With C-PL filter

For protecting lenses by magnetic attachment
Magnetic Slim Lens Protect/Adp.

Ultra slim design that is also excellent for single use

With a male screw, it is used by directly attaching it to the lens. The ultra-slim frame is designed to prevent vignetting even with wide-angle lenses
For the lens cap, please use the dedicated cap for the Magnetic Slim filter series. Only the magnet slim series filters can be stacked.

Supplied Accessory:
Pouch that is secure when carrying or shooting

The opening is designed to open wide for easy take-out of filters. Light weight, belt wearable, makes your filter work more active!
