

Honeywell Spray Painters Kit

Product description

A respiratory system that cools the face and reduces fogging - ideal when applying two-pack paint.

Honeywell Supplied Air Respirators are the proven safety solution when you need clean, compressed air from a source outside the contaminated area. Air passes through an airline to the visor, with the continuous flow creating increased pressure inside. This pressure cools the users face and reduces fogging, a common problem in many working situations.

The Honeywell Spray Painters kit includes an Airvisor which has been developed and styled to offer the best protection, comfort and quality, whilst still being durable enough to meet the requirements of today's industrial environments.

The Spray Painters Kit also includes an auxiliary hose for a spray gun or air tool, a waist belt with tamper proof air flow regulator and an activated carbon filter.

FEATURES

- A complete respiratory protective system, ideal when applying 2-pack paint.
- Complete with visor, auxiliary air hose, waist belt and filter system.
- 7.5m air hose with fittings approved to Australian Standards.
- Clearflow II Two person combination filter set, including airline fittings.
- Kit is packed in a re-usable plastic container.

APPLICATIONS

- Spray Painting 2 Pack Paint
- Automotive Industry
