

Maintaining your anti-graffiti finish.

It is important that you are aware of how to care for and help maintain the appearance of your Two-pack Polyurethane surface. To ensure the longevity of the appearance, please take note of the following information.

NOTE: NO ABRASIVE TYPE CLEANERS OR POLISHES TO BE USED

General Regular Cleaning

This is best carried out with a sponge or a soft cloth and any household cleaning detergents or products.

Abrasive cleaning agents must NOT be used.

When cleaning UT151 Anti-Graffiti Clear, we recommend using Methylated Spirits or Methyl Isobutyl Ketone.

Other materials can be used but should be tested on a small area first. If coating surface is affected, then items will need to be re-coated to protect against further deterioration.

Polishing

The product is suitable for polishing with a soft cloth if required. Felt tipped marker damage should be removed using methylated spirits within 48 hours.

Mechanical Damage

Should the panels be physically scored, chipped or scraped in any way please consult the manufacturer for the best method of repair / replacement.

Scratch damage can usually be repaired simply by application of the top coat (available from the manufacturer) using a fine camel brush.
