

Ceramic 740

ceramic 740

CERAMIC discs are fast cutting products with improved performance that last significantly longer than the conventional abrasives. A water-based stearate coating provides maximum load resistance, thus extending the life of the product.

Self-sharpening ceramic grain ensures consistently aggressive sanding with at the same time low contact pressure. The discs remain aggressive in their sanding capacity, right down to the last grain.

They are perfect for sanding scratch-resistant varnishes, E-coats, primers and composites eliminating thus the need of other specialty products. Moreover, putting increased working pressure becomes easy for the user when sanding with 740 discs hence providing higher removal rates. Their 15-hole pattern contributes to a dust-free environment.

APPLICATIONS	Automotive / Marine hard tasks
TECHNICAL SPECS	Backing: D-wt, C-wt semi latex paper, Grain: ceramic, Bonding: resin over resin
	Coating: open, Special stearate coating against clogging and loading
TYPE	Ø 150mm, 15 holes
GRITS	P40, P60, P80, P100, P120, P150, P180, P240, P320, P400, P500, P600
