

PROFESSIONAL HENNA INSTRUCTIONS

Brow Preparation

Complete a patch test before proceeding with the service. Ensure the client has not used Retin-A or AHA near the brow area for 72 hours prior to henna service. The skin should be free from self-tanner to avoid adverse color results.

Map the brows as needed.

Henna Preparation

To a glass mixing dish, add one Brow Code Henna Powder capsule with 10-12 drops of Rose Water. Let the mixture sit for 5 to 10 minutes to allow the Henna to form a thick caramel consistency.

Henna Application

Cleanse the brows using the Brow Conditioning Cleanser. Rinse with a damp cotton pad. Gently exfoliate the brow area with the Brow Scrub. Rinse with a damp cotton pad. Ensure brows are dry and free of oils and sebum for optimal Henna adhesion.

Using a Tinting Brush, carefully apply the first layer of Henna to the brow to create your desired shape. Apply up to two additional layers, depending on desired intensity.

Leave it on for 15 to 25 minutes. To ensure proper development, keep the area moist by applying small amounts of henna paste or Rose Water to the brow.

Henna Removal

Gently remove Henna using a damp cotton round, starting from the head and moving towards the tail of the brow. Avoid scrubbing back and forth to prevent removing Henna from the skin.

Brush brows into place.
