

# PROFESSIONAL TINT INSTRUCTIONS

## Brow Preparation

Complete a patch test before proceeding with the service.

Cleanse the brow area with an oil-free foaming cleanser. Rinse with a damp cotton pad. Ensure brows are dry and free of oils and sebum for optimal tint adhesion.

Brush the brows upwards and map as needed.

## Tint Preparation

Mix equal parts of Brow Tint and Cream or Liquid Oxidant into a creamy paste using an applicator stick. The mixing ratio is 1:1 (Generally 4 drops of Cream or Liquid Oxidant is enough to make an even paste).

## Tint Application

Apply the Tint in the desired shape, using precision to ensure a clean result. Use a clean, dry cotton tip to clean up the edges of the brow as you apply.

Leave on for 5 to 12 minutes depending on desired intensity. The longer the Tint is left on, the darker it will become.

## Tint Removal

Remove the Tint with a dry cotton ball. Use Brow Code Tint Remover on a dry cotton pad or cotton tip to lighten or clean any areas if needed.

Brush brows into place.
