

PRESSURE MEASUREMENT COURSE

This course covers essential knowledge of the calibration and use of a wide range of pressure measuring instruments, their principles of operation and potential sources of error – it incorporates extensive hands-on practical exercises.

Course Objectives

The course provides participants with knowledge and skills to:

- understand the principles of operation of a variety of pressure measuring instruments
- understand the processes involved in the use and calibration of pressure equipment
- identify the various sources of error that affect pressure measurements

Course Outline

The topics covered include:

- introduction to pressure measurement
- traceability and international standards
- vacuum pressure measurement
- pressure transducers and calibrators
- barometry, manometry and liquid columns
- differential and gauge pressure measurement
- the piston gauge and its use
- high pressure
- estimating measurement uncertainty¹
- the use of uncertainties given in NATA-endorsed reports

¹Participants with limited experience in estimating measurement uncertainty would benefit from first attending the one-day Introduction to Estimating Measurement Uncertainty course.

Past attendees have said...

"After attending this course, I now have the knowledge to calibrate with confidence"

"We are now a lot closer to NATA accreditation, Thank you"

Course Details

Dates / Venue

Available dates and locations can be found on our [website](#).

Fee / Inclusions

Check the NMI [website](#) for the current pricing, and include a copy of Monograph 7: Pressure measurement.

Face-to-face classes include lunch and refreshments.

Time

Face-to-face course will start at 9 am and will finish by 5 pm

Related Courses

Course name	Duration	Dates
Introduction to estimating measurement uncertainty	1-day	See NMI website
Humidity Measurement	1-day	See NMI website
Calibration of liquid hydrocarbon flowmeters	2-day	See NMI website

In-house Options

Training may be carried out at your premises for groups of 6+ on a fee for service basis.

Consultancies provide advice regarding specific measurement issues or training in advanced measurement techniques. More information is found on our [website](#).
