on cover

*Spheres & Vortices*  
*Sphere 6: The dazzling green provocateur*  
2010, acrylics on canvas, spatula technique, cm 230x170

It's not easy to talk about art with the aim to describe it. You can partially describe its meaning, or you can talk about its role in the global culture during centuries, but every word will never be enough thorough for it; but maybe art is something that in the end doesn't need words, but just visual frames of creativity. Art is something that belongs to everyone, it doesn't matter if you are an expert or just an amateur, because art moves feelings and emotions, so concerns with everybody, but just a real artist can give this image of art offering his creations to a public in an anxious wait to discover new masterpieces. Through evocative iconography, chromatic organization, personal sensation and of course technical skills, our artists give to the world a very precious gift. Art is a very wide field that includes several styles and techniques always enriched by the personality of the artist, and so it's a duty for all of us to thank these incredible artists for the free love and good vibrations they spread through their works, it's our duty to underline their constant dedication in turning the world into a better and more poetical place. Artists who show their sensitivity in every single brush stroke, who combine colors in order to move a precise sensation in the observer, who put their heart and mind in their works. Art can be sculpture, can be photography, painting or something else, but this will always be something not so important, because even if you change the shape of something, what counts is the essence.
