

Installation GUIDE

WALL PLAY™

Wall Play™ is easy to install. Dramatic compositions are possible by mixing shapes and colors, using a few or many. Simply mount each to your wall or surface.

PLANNING ¹

Decide the overall size of your design and how many pieces you would like to use. Sketching will help to explore options. Another way of visualizing your creation is to adhere Post-It® papers to your wall to represent each Wall Play™ shape. Move the papers around until you are happy. Experiment with clustering and loose flowing.

INSTALLING ²

- 1 Arrange
- 2 Twist
- 3 Enjoy

Wall Play™ is designed for easy installation. In soft material such as drywall, it is as easy as twist-and-go.

For harder material, we recommend pre-drilling pilot holes (1.8"). The softer the material, the smaller the drill bit you will need. Drill your holes right through the sticky notes.

BE CREATIVE ³

Wall Play™ is not just for vertical surfaces. You can add splashes of texture and color almost anywhere. Flow your design onto a ceiling, create a custom sculpture, customize furniture and more. Many styles are paintable and can even be used outdoors.

Have fun and enjoy.

TRY TIGHT CLUSTERS...

OR LOOSE & FLOWING

TIPS

- **For clustering,** it is important to note the widest dimension of each Wall Play™ style. This is the minimum distance required between each.
- **If overlapping** Wall Play™ of different heights, install the shorter one first, then the taller.
- **Broken screw?** Usually your substrate is too hard and a pilot hole is required using a 1/8" drill bit. Remove the broken screw using needle nose pliers. Or leave as is and camouflage the broken screw with another Wall Play™ component.
- **Loose fitting?** Excessive screwing and unscrewing can make the screw hole less stable. Fill the hole with short pieces of toothpicks. Putting a small amount of glue on the screw also can help to secure better especially in thin drywall.
