You will need...

We provide...

Please note whilst we supply fixings, you MUST use the most suitable fixings for your wall type.

grouper mirror

WARNING - This mirror is very heavy so you will need to check that the wall you want to hang it on is suitable and able to support the weight. You will need two people to lift the mirror into position. The weight is 20kgs.

1. Choose the desired position for the mirror in your home.
2. Put the wall bracket in the desired spot. - Make sure you use a spirit level to ensure the wall bracket is level and mark where to drill the holes with a pencil.
3. Drill the seven holes.
4. Suitable wall plugs can then be pushed into the holes.
5. Line up the bracket and secure to the wall using suitable screws into the drilled holes.
6. The mirror can now be lifted by two people and the back plate placed on top of the wall bracket. Done!

MAINTENANCE - Please do not use any chemicals on your lovely new mirror (surface or frame!). Use a dust-proof wipe and a sponge with soapy warm water only.
