**FAEMA** E71E

### **Intro: The E71 Range**

Imagine a machine that can meet the needs of coffee specialists, while at the same time arousing the interest of every barista. The E71E is designed for those who do not accept compromises on the coffee that they want to offer their customers and for those who do not renounce manual skills and want to interact simply and immediately with the machine.

The Faema E71 range is thus expanded and the best interpreter of master coffee artists features new designs.

### A better head: The new groups

The new design of the groups is the very essence of the machine, the point at which the barista's ideas meet the mechanics of the new E71E.

Thanks to the independent groups, the E71E can manage different coffee varieties, respecting the specific temperatures of each one for optimal extraction. Additionally, the hydraulic circuit with a GTi control system guarantees perfect management of coffee infusion times: a perfect combination for simultaneously ensuring high thermal stability and enhancement of each coffee's sensory profile. And thanks to the ergonomic and intuitive display dedicated to each of the groups, it is even simpler to interact with the E71E.

### **Better hands: The new filter holders**

Every machine is much more than the sum of its component parts, but it is the details and new design that make the new E71E truly unique.

The new, redesigned handles (in the wooden version) are designed to offer maximum ergonomics and comfort. In addition, optional new filter holders in the naked and double shot versions will be available, perfectly illustrating the evolution of the extraction method and the experience that the E71E offers baristas.

### More imagination: The new wands

Redesigned to offer greater flexibility, the new wands are one of the machine's most innovative features. Their length has been increased to allow baristas to work with larger milk jugs, while cold touch technology makes the wand grip more ergonomic and secure and facilitates cleaning after use.

The articulated wands allow baristas to work in their preferred position with maximum visibility, ensuring perfect frothing every time.

### E71E Customization

Every barista can customize certain bodywork elements, such as the rear panel, the heads of the new groups and the covers of the steam taps, as well as the filter holder handles.

\* Stainless steel filter holders also available

\* Optional backlit back panel

#### Adjustable pressure setting

Pump pressure with external adjustment (on the side of the machine) for quick and independent manual calibration by the barista. It can be customized according to the type of coffee used.

#### New steam wands

For the new Faema E71E, long, articulated cold-touch steam wands have been designed to improve the machine's ergonomics

#### Hot water wand

The telescopic hot water wand guarantees greater flexibility of use. Additionally, the water supply system for infusions and tea can be customized and can have up to three temperature settings and two for dosing.

#### Patented Faema GTI heating system

The FAEMA E71E features a hydraulic circuit with a GTI system that guarantees perfect control of infusion times.

#### Control Panel

Electromechanical pushbutton panel with 3 or 5 backlit buttons positioned on an inclined plane for intuitive, immediate and ergonomic interaction with the machine. The OLED displays show the group temperature as well as the infusion and dispensing times

#### New spray heads

The E71E is fitted with demountable Competition Faema spray heads, which are attached with screws to make them easier to remove and to improve daily cleaning operations

The steam lever with manual and modular management features a purge system and gradual opening, offering baristas two locking steps: 50% and 100%.
