1. Introduction

CRE, CRIE and CRNE pumps

The CRE, CRIE and CRNE pumps are based on the CR, CRI and CRN pumps.

CRE, CRIE and CRNE pumps belong to the so-called E-pump family and are referred to as E-pumps.

The difference between the CR and CRE pump ranges is the motor.

E-pumps are fitted with an E-motor, meaning a motor with a built-in frequency converter.

The E-pump motor is a Grundfos MGE motor designed to meet EN standards.

The built-in frequency converter enables continuous variable control of the motor speed.

This means that the pump can be set to operation at any duty point. The purpose of continuous variable speed control of the motor speed is to adjust the performance to a given requirement.

E-pumps are available with an integrated pressure sensor connected to the frequency converter that functions as a feedback sensor for constant pressure control.

In new installations, the E-pumps provide a number of advantages. The built-in frequency converter has a built-in motor protection function which protects both motor and electronics against overload.

This means that E-pump installations do not require a motor-protective circuit breaker, but only a normal short-circuit protection for the cable. The pump materials are identical to those of the CR, CRI and CRN pump ranges.

Examples of E-pump applications

E-pumps are the ideal choice for a number of applications characterized by a demand for variable flow at constant pressure. The pumps are suited for water supply systems and pressure boosting as well as for industrial applications.

Depending on the application, the pumps offer energy savings, increased comfort and improved processing.

E-pumps in the industry market

The industry market uses a large number of pumps in many different applications. Demands on pumps in terms of pump performance and mode of operation make speed control a must in many applications.

Some of the applications in which E-pumps are often used are listed below.

Constant pressure

- Water supply
- washing and cleaning systems
- distribution from waterworks
- humidifying systems
- water treatment systems
- process boosting systems.

Example: Within industrial water supply, E-pumps with an integrated pressure sensor are used to ensure a constant pressure in the pipe system. From the feedback sensor, the E-pump receives inputs about changes of pressure as a result of changes in the consumption. The E-pump responds to the input by adjusting the speed until the pressure is equalized. The constant pressure is stabilized once more on the basis of a preset setpoint.

Constant temperature

- Air-conditioning systems at industrial plants
- industrial cooling systems
- industrial freezing systems
- casting and moulding tools.

Example: In industrial freezing systems, E-pumps with a temperature sensor increase the comfort and lower the operating costs compared with pumps without a feedback temperature sensor.

An E-pump continuously adapts its performance to the changing demands reflected in the differences in temperature of the liquid circulating in the freezing system. Thus, the lower the demand for cooling, the smaller the quantity of liquid circulated in the system and vice versa.

Constant level

- Boiler feed systems
- condensate systems
- sprinkler irrigation systems
- chemical industry.

Example: In a steam boiler, it is important to be able to monitor and control the pump operation to maintain a constant level of water in the boiler.

By using an E-pump with a level sensor in the boiler, it is possible to maintain a constant water level.

A constant water level ensures an optimum and cost-efficient operation as a result of a stable steam production.

Dosing applications

- Chemical industry, meaning control of pH values
- petrochemical industry
- paint industry
- degreasing systems
- bleaching systems.

Example: In the petrochemical industry, E-pumps with a pressure sensor are used as dosing pumps.

The E-pumps help to ensure that the correct mixture ratio is achieved when more liquids are combined.

E-pumps functioning as dosing pumps improve processing and offer energy savings.

E-pumps in commercial building market

The commercial building market use E-pumps to maintain a constant pressure or a constant temperature based on a variable flow.

Constant pressure

- Water supply in high-rise buildings, such as office buildings and hotels.

E-pumps with a pressure sensor are used for water supply in high-rise buildings to ensure a constant pressure even at the highest draw-off point. As the consumption pattern and thus the pressure changes during the day, the E-pump continuously adapts its performance until the pressure is equalized.

Constant temperature

- Air-conditioning systems in for example hotels and schools
- building cooling systems.

Example: E-pumps are an excellent choice for buildings where a constant temperature is essential. E-pumps keep the temperature constant in air-conditioned, high-rise glass buildings, irrespective of the seasonal fluctuations of the outdoor temperature and various heat impacts inside the building.

When to select an E-pump

Select an E-pump if the following is required:

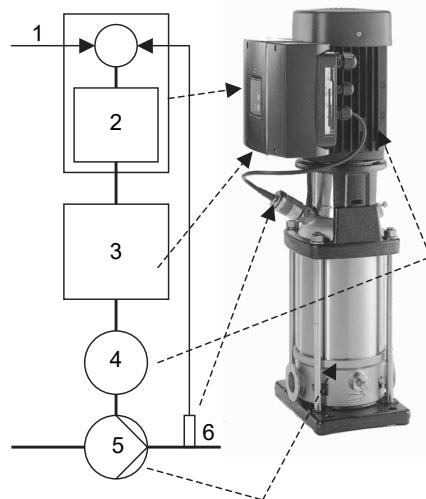

- controlled operation, that is the consumption fluctuates
- constant pressure
- communication with the pump.

Adaptation of performance through frequency-controlled speed control offers obvious benefits, such as the following:

- energy savings
- increased comfort
- control and monitoring of the pump performance.

Components of a Grundfos E-pump

An E-pump is not just a pump, but a system which is able to solve application problems or save energy in a variety of pump installations. All that is required is the power supply connection and the fitting of the E-pump in the pipe system, and the pump is ready for operation. The pump has been tested and pre-configured from the factory. The operator only has to specify the desired setpoint (pressure) and the system is operational.

E-pumps with and without a sensor

CRE, CRIE and CRNE pumps are available with a pressure sensor enabling the control of the pressure on the pump outlet side. The E-pump is also available without a sensor.

The purpose of supplying CRE, CRIE and CRNE pumps with a pressure sensor is to make the installation and startup simple and quick.

Generally, E-pumps without a sensor are used when uncontrolled (open loop) operation is required or when there is a wish to fit a sensor at a later stage to enable the following:

- pressure control
- flow control
- level control of liquid in a tank
- temperature control
- differential pressure control
- differential temperature control.

E-pumps without a sensor are also used when a remote analog signal is connected to the setpoint input terminal. For further information, see the section on control modes.

Related information*Control modes***ErP compliant**

The product is energy-optimized and complies with the ecodesign requirements for water pumps specified in the ErP Directive (Commission Regulation (EC) No 547/2012), which became effective on 1 January 2013. As from this date, all pumps are classified and graduated in the Minimum Efficiency Index (MEI).

Minimum efficiency index

Minimum efficiency index (MEI) means the dimensionless scale unit for hydraulic pump efficiency at best efficiency point (BEP), part load (PL) and overload (OL). The Commission Regulation (EU) sets efficiency requirements to $MEI \geq 0.10$ as from 1 January 2013 and $MEI \geq 0.40$ as from 1 January 2015. An indicative benchmark for best-performing water pump available on the market as from 1 January 2013 is determined in the Commission Regulation.

- The benchmark for most efficient water pumps is $MEI \geq 0.70$.
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.
- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable-speed drive that matches the pump duty to the system.
- Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

MEI values for CR pumps

3. Features and benefits

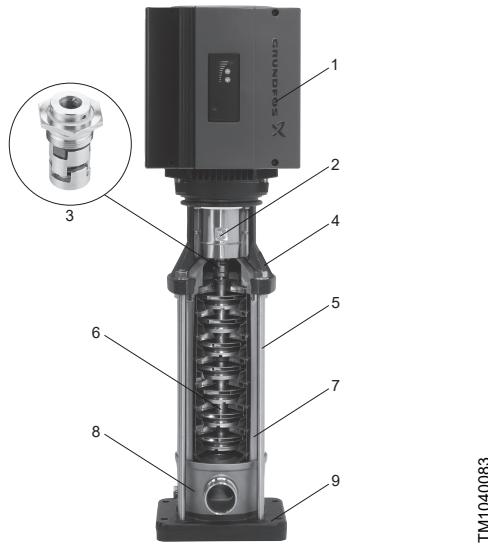

Pump

The CR and CRE pumps are non-self-priming, vertical multistage centrifugal pumps.

The pumps are available with a Grundfos frequency-controlled motor.

The pump consists of a pump head and a base.

The chamber stack and the sleeve are secured between the pump head and the base with staybolts. The base has inlet and outlet ports on the same level (in line). All pumps are fitted with a maintenance-free mechanical shaft seal of the cartridge type.

TM1040883

Motor

MGE motors

MGE motors incorporate thermal protection against slow overload and blocking.

CRE, CRIE and CRNE pumps require no external motor protection.

Frequency-controlled MGE motors

CRE, CRIE and CRNE pumps are fitted with a totally enclosed, fan-cooled, frequency-controlled MGE motor with principal dimensions to EN standards.

CRE, CRIE, CRNE pumps from 0.37 to 1.5 kW are available with single-phase MGE motors.

CRE, CRIE, CRNE pumps from 0.37 to 26 kW are available with three-phase MGE motors.

See Grundfos Product Center at www.grundfos.com.

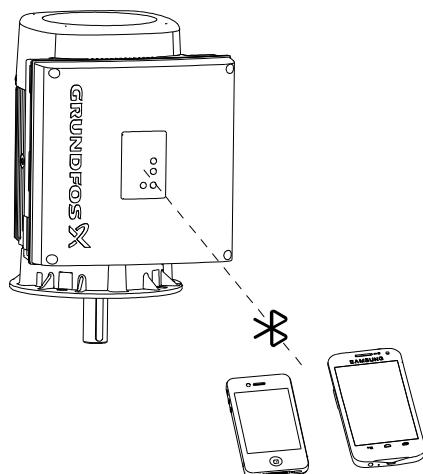

Electrical data

MGE motor	
Mounting designation	Up to 4 kW: V18 5.5 kW and up: V1
Insulation class	F
Efficiency class	0.37 to 26 kW: IE5 level
Enclosure class	0.37 to 26 kW: IP55 (IP66 optional)

Tolerance: - 10 %/+ 10 %	P2: 15-26 kW: 3 x 380-480 V
Supply frequency	50/60 Hz

Bluetooth

For MGE motors from 15 to 26 kW, the product incorporates a Bluetooth (BLE) module for remote control. For MGE motors from 0.37 to 11 kW, see the detailed description about Grundfos GO.

Via the built-in Bluetooth module, the product can communicate with Grundfos GO. Bluetooth communication can take place at distances up to 10 metres.

Grundfos GO Link

The product is designed for wired or wireless communication with Grundfos GO Link.

Grundfos GO Link enables you to set functions and gives you access to status overviews, configuration and current operating parameters.

Use Grundfos GO Link together with these interfaces:

**Grundfos GO Link setup**

Pos.	Description
1	Ethernet cable: Standard Ethernet cable CAT5/CAT6.
2	Grundfos MI 301: Separate module enabling radio communication. Use the module together with a USB cable to connect to a laptop.
3	Grundfos PC Tool Link: Separate module enabling wired connection to the pump. Use the module together with a USB cable to connect to a laptop.

Functional module, FM 300

MGE 0.37 to 11 kW

The FM 300 is factory-fitted in all pumps from 0.37 to 11 kW.

The module has a number of inputs and outputs enabling the motor to be used in advanced applications where many inputs and outputs are required.

The FM 300 has these connections:

- three analog inputs
- one analog output
- two dedicated digital inputs
- two configurable digital inputs or open-collector outputs
- Grundfos Digital Sensor input and output
- two Pt100/1000 inputs
- two LiqTec sensor inputs
- two signal relay outputs
- GENIbus connection.

Connection terminals

All inputs and outputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits. All control terminals are supplied with protective extra-low voltage (PELV), thus ensuring protection against electric shock.

- Signal relay outputs

- Signal relay 1:

LIVE:

Power supply voltages up to 250 VAC can be connected to this output.

PELV:

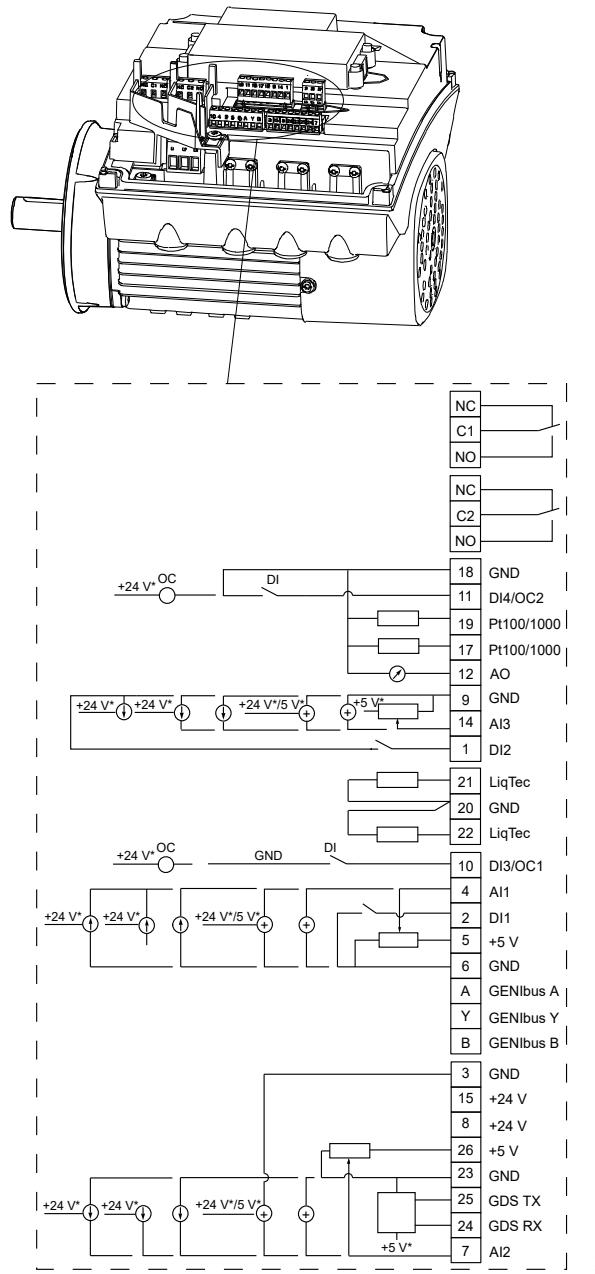

The output is galvanically separated from other circuits. Therefore, the supply voltage or protective extra-low voltage can be connected to the output as desired.

- Signal relay 2:

PELV:

The output is galvanically separated from other circuits. Therefore, the supply voltage or protective extra-low voltage can be connected to the output as desired.

- Power supply (terminals N, PE, L or L1, L2, L3, PE)

* If an external supply source is used, there must be a connection to GND.

Connection terminals, FM 300 functional module

Functional module, FM 310 and FM 311

MGE 15 to 26 kW

FM 310 and FM 311 are factory-fitted in all pumps from 15 to 26 kW.

Inputs and outputs

Note that the FM 311 functional module does not include Bluetooth connection.

The module has these connections:

- three analog inputs
- one analog output
- two dedicated digital inputs
- two configurable digital inputs or open-collector outputs
- Grundfos Digital Sensor input and output
- two Pt100/1000 inputs
- two LiqTec sensor inputs
- two signal relay outputs
- GENIbus/Modbus connection
- two Safe Torque Off (STO) inputs¹⁾
- Ethernet connection
- Bluetooth (BLE) connection.²⁾

¹⁾ Safe Torque Off (STO) is a safety function with the purpose to stop the motor from turning, without actively braking it. It follows the definition by EN 61800-5-2.

²⁾ FM 311 is without Bluetooth.

Connection terminals

All control terminals are supplied with safety extra-low voltage (SELV), ensuring protection against electric shock.

The inputs and outputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits.

Cables for the relays and the Ethernet cable must be rated at least 250V/2A.

The relays are approved for overvoltage category II, whether power is supplied from a transformer or the power supply.

Signal relay outputs

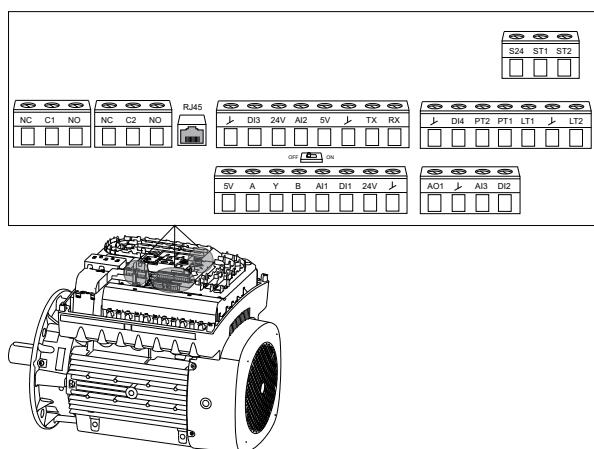

Signal relay 1

LIVE: You can connect supply voltages up to 250 VAC to the output.

SELV: The output is galvanically separated from other circuits. Therefore, you can connect the supply voltage or safety extra-low voltage to the output as desired.

Signal relay 2

SELV: The output is galvanically separated from other circuits. Therefore, you can connect the supply voltage or safety extra-low voltage to the output as desired.

Terminal box positions

As standard, the terminal box is fitted on the inlet side of the pump.

Terminal box positions

Pos.	Description
1	6 o'clock position (standard)
2	9 o'clock position
3	12 o'clock position
4	3 o'clock position

Ambient temperature and installation altitude

The ambient temperature and the installation altitude are important factors for the motor life, as they affect the bearings and the insulation system. The installation altitude is the height of the installation site above sea level.

Motors installed at maximum ambient temperature and altitude can be loaded 100 %.

If the ambient temperature or the installation altitude exceeds the recommended maximum values, the motor must not be fully loaded due to the risk of overheating. Overheating may result from excessive ambient temperatures or high altitudes with low density and low cooling effect of the air.

In such cases, it may be necessary to select an oversized motor with a higher rated output. To determine the motor load, it is necessary to calculate the derated motor power.

Maximum ambient temperature and altitude for Grundfos MGE motors

The table shows the maximum permissible ambient temperature at full load and the maximum permissible installation altitude above sea level at full load.

Motor efficiency class: IE5

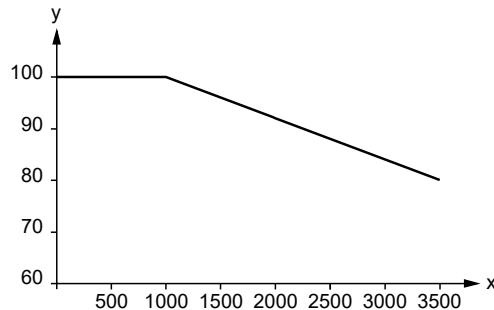

Motor power [kW]	Motor make	Phase	Max. ambient temperature [°C]	Max. altitude [m]
0.37 - 1.5	MGE	1	50	1000
0.37 - 11	MGE	3	50 ⁴⁾	1000
15-22	MGE	3	50	1000
26	MGE	3	40	1000

4) 3 x 200–240 V MGE motors are rated for a maximum ambient temperature of 40 °C.

Motor load for Grundfos MGE motors

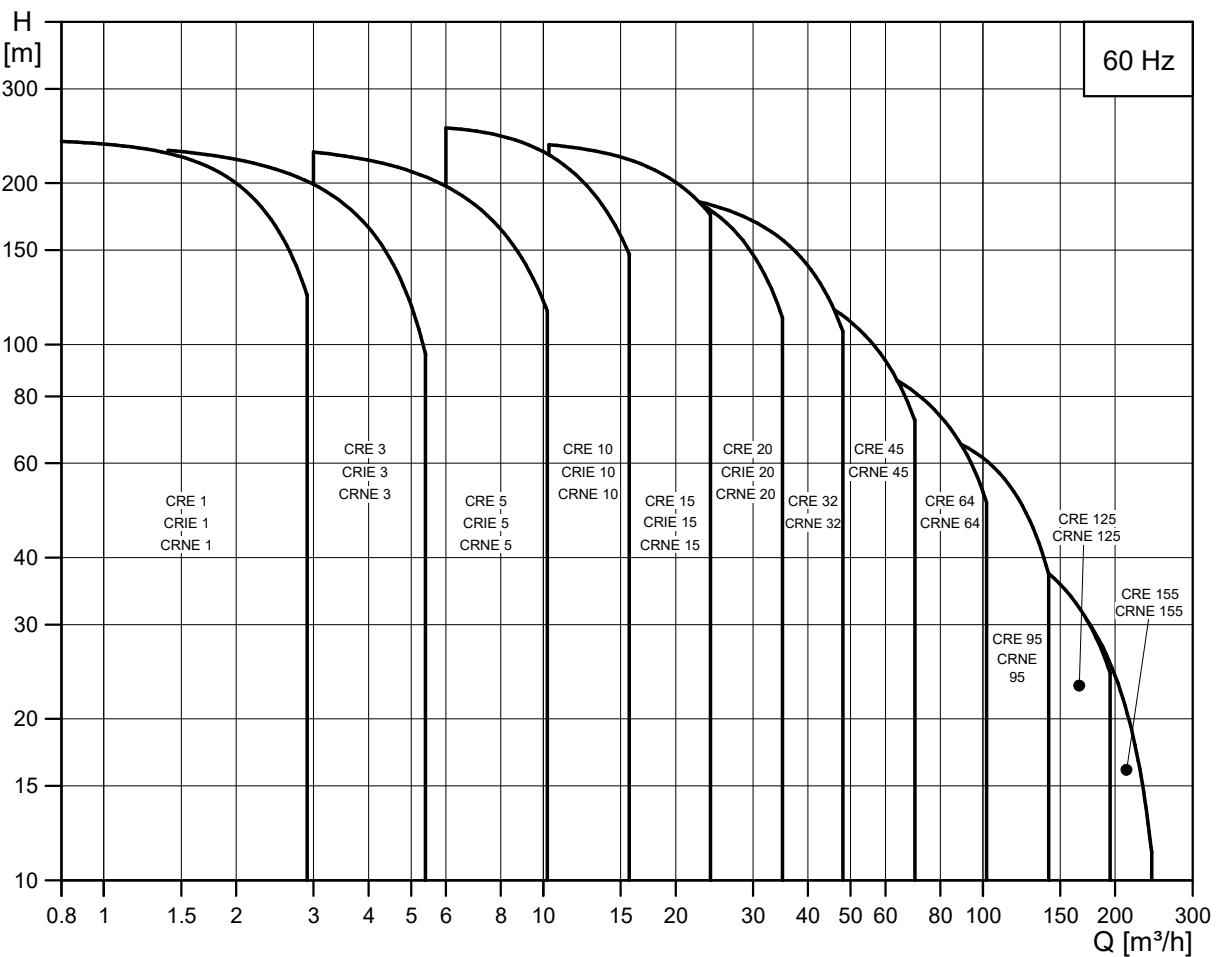

MGE motors can be installed up to 3500 metres above sea level.

Motors installed above the maximum installation altitude of 1000 metres above sea level must not be fully loaded. Use the below diagram to calculate the derated motor power. If the required motor output exceeds the derated motor power, select an oversized motor.

Derating of motor output power P2 % (y-axis) in relation to installation altitude above sea level in metres (x-axis)

6. Identification

Type key

Example: CRE 32-3-2 A-F-A-E-HQQE

Code	Explanation
CR	Type range: CR, CRI, CRN, CRT
E	Pump with integrated frequency converter
32	Flow rate [m ³ /h]
3	Number of impellers
2	Number of reduced-diameter impellers
A	Code for pump version
F	Code for pipe connection
A	Code for materials
E	Code for rubber parts
	Code for shaft seal:
H	Shaft seal type designation
Q	Seal face material (rotating seal face)
Q	Seal face material (stationary seal face)
E	Secondary seal material (rubber parts)

Key to codes

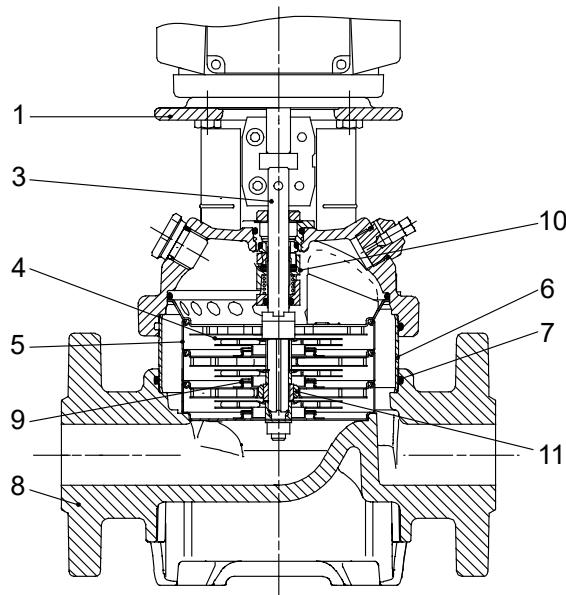

Code	Description
Pump version	
A	Basic version
B	Oversize motor
C	CR compact
D	Pump with pressure intensifier
E	Pump with certificate
F	Pump for high temperatures (with air-cooled top)
G	E-pump without operating panel
H	Horizontal version
I	Different pressure rating
J	E-pump with a different maximum speed
K	Pump with low NPSH
L	Pump including Grundfos CUE and certificate
M	Magnetic drive
N	With sensor
O	Cleaned and dried
P	Undersize motor
Q	High-pressure pump with high-speed MGE motor
R	Belt-driven pump
S	High-pressure pump
T	Thrust-handling device
U	ATEX-approved pump
V	Cascade function
W	Deep-well pump with ejector

²⁴⁾ Only fitted on pumps with 75 kW motors or larger.

8. Operating conditions

Pumped liquids

The pumps are designed to pump non-explosive liquids that do not chemically attack the pump materials.

When pumping liquids with a density and/or viscosity higher than that of water, oversized motors may be required.

Whether a pump is suitable for a particular liquid depends on several factors of which the most important are the chloride content, pH-value, temperature and content of chemicals and oils.

Please note that aggressive liquids may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion.

CRE and CRIE

The pumps are suitable for non-corrosive liquids.

Use them for liquid transfer, circulation and pressure boosting of cold or hot clean water.

CRNE

The pumps are suitable for industrial liquids.

Use them in systems where all parts in contact with the liquid must be made of high-grade stainless steel.

List of pumped liquids

A number of typical liquids are listed below.

Other pump versions may be applicable, but those stated in the list are considered to be the best choices.

The table is intended as a general guide only and cannot replace actual testing of the pumped liquids and pump materials under specific working conditions.

Therefore, use the list with some caution. Factors such as those mentioned below may affect the chemical resistance of a specific pump version:

- concentration of the pumped liquid
- liquid temperature
- pressure.

Take safety precautions when pumping dangerous liquids.

Notes

D Often with additives.

E The density and/or viscosity differ from that/those of water. Take this factor into account when calculating motor output and pump performance.

F Pump selection depends on many factors. Contact Grundfos.

H Risk of crystallisation/precipitation in shaft seal.

1 Highly flammable liquid.

2 Combustible liquid.

3 Insoluble in water.

4 Low self-ignition point.

Sulphuric acid	H ₂ SO ₄	F	1 %, 20 °C	-	HQQV
Sulphurous acid	H ₂ SO ₃	-	1 %, 20 °C	-	HQQE
Unsalted swimming-pool water		-	Approx. 2 ppm free chlorine (Cl ₂)	HQQE	-

Viscosity

The pumping of liquids with densities or kinematic viscosities higher than those of water will cause a considerable pressure drop, a drop in the hydraulic performance and a rise in power consumption.

In such situations, the pump must be fitted with a larger motor. If in doubt, contact Grundfos.

Maximum operating pressure and liquid temperature

CRNE 20	10	-20 - +120	25	
CRE, CRNE 32-1-1 → 32-5	-	-	16	
CRE, CRNE 32-6-2 → 32-10-2	-	-	30	
CRE, CRNE 45-1-1 → 45-4	-	-	16	
CRE, CRNE 45-5-2 → 45-7	-	-	30	
CRE, CRNE 64-1-1 → 64-3	-	-	16	-30 - +120
CRE, CRNE 95-1-1 → -95-2-1	-	-	16	
CRE, CRNE 125-1-1 → 125-1	-	-	16	
CRE, CRNE 155-1-1	-	-	16	

Note that for pump sizes 32, 45, 64, the max. pressure for PJE version is 50 bar and only available in the CRNE version.

Operating range of the shaft seal

All pumps will be delivered with a HQQE/V cartridge shaft seal as standard.

The operating range of the shaft seal depends on operating pressure, pump type, type of shaft seal and liquid temperature. The range shown in figs Operating range of standard shaft seals for CRE, CRIE, CRNE 1-155 and Operating range of standard shaft seals for CR, CRN 125-155 applies to clean water and water with antifreeze liquids. For selection of the right shaft seal, see the section on pumped liquids. If the operating range is exceeded, the life of the shaft seal may be reduced.

Note that if you pump demineralised water with a conductivity below 2 $\mu\text{S}/\text{cm}$ with a pump equipped with a silicon carbide/silicon carbide shaft seal, there is an increased risk of electro corrosion. We recommend that you use a silicon carbide/carbon or silicon carbide/tungsten carbide shaft seal instead.

Optional shaft seals

See the section on variants for optional shaft seal solutions.

Maximum inlet pressure

The following table shows the maximum permissible inlet pressure. However, the outlet pressure, which is the actual inlet pressure plus the pressure delivered by the pump, must always be lower than the maximum permissible operating pressure.

If the maximum permissible operating pressure is exceeded, the conical bearing in the motor may be damaged and the life of the shaft seal reduced.

Pump type and stages	Maximum inlet pressure [bar]

Examples of operating and inlet pressures

The values for operating and inlet pressures must not be considered individually and must comply with the below statement.

The outlet pressure must be equal to or lower than the maximum operating pressure.

See the following definitions and examples.

Definitions

Pressure type	Definition
Maximum operating pressure	The maximum pressure is stated on the nameplate.
Pump differential pressure	The difference between the outlet pressure and inlet pressure.
Inlet pressure	The pressure measured at the pump inlet.
Outlet pressure	The inlet pressure added to the pump differential pressure.

Example 1

Pump, see the section on CRE3:	CRE 3-11 A-A-A
Max. operating pressure:	16 bar
Max. inlet pressure:	10 bar
Pump differential pressure:	10.3 bar ²⁵⁾

²⁵⁾ Flow rate = 0 m³/h

This pump is not allowed to start at an inlet pressure of 10 bar, but at an inlet pressure of 16.0 - 10.3 = 5.7 bar.

Example 2

Pump, see the section on CRE 10:	CRE 10-2 A-A-A
Max. operating pressure:	16 bar
Max. inlet pressure:	8 bar
Pump differential pressure:	2.9 bar ²⁶⁾

²⁶⁾ Flow rate = 0 m³/h

This pump is allowed to start at an inlet pressure of 8 bar, as the outlet pressure is lower than the maximum operating pressure. This results in an operating pressure of 8.0 + 2.9 = 10.9 bar.

If the inlet or operating pressure exceeds the pressure permitted, see the section on variants.

Control of E-pumps

Control options

It is possible to communicate with E-pumps via the following platforms:

- operating panel on the pump
- Grundfos GO
- Grundfos GO Link
- central management system.

The purpose of controlling an E-pump is to monitor and control the pressure, temperature, flow and liquid level of the system.

Operating panels

The operating panel on the E-pump terminal box makes it possible to change the setpoint settings manually. All settings are saved if the power supply is switched off.

The following operating panels are available as standard:

- HMI 200
- HMI 300

Note that these panels include an integrated radio module.

The following operating panels, without an integrated radio module, are available on request:

- HMI 100
- HMI 101
- HMI 201
- HMI 301

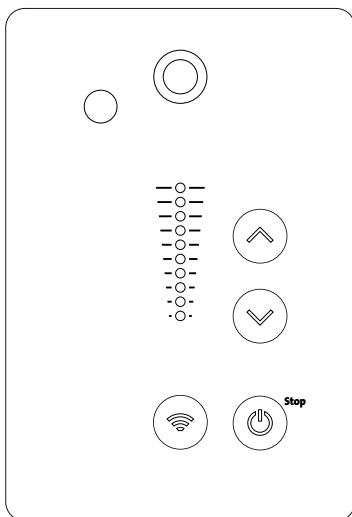

For further information, see the section on variants.

TM084862

Grundfos GO

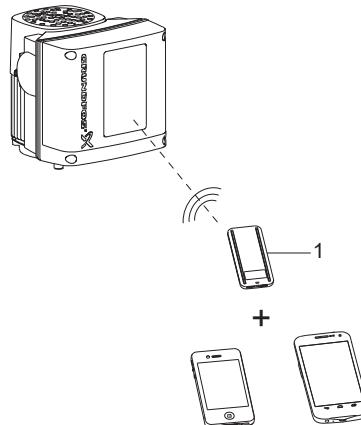

Grundfos GO enables you to set functions and gives you access to status overviews, technical product information and current operating parameters.

MGE 0.37 to 11 kW

The product is designed for wireless radio or infrared communication with Grundfos GO.

Use Grundfos GO together with this mobile interface:

- Grundfos MI 301.

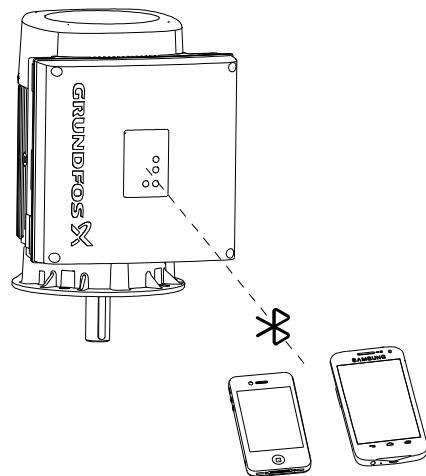

TM066256

Pos.	Description
1	Grundfos MI 301: Separate module enabling radio or infrared communication. Use the module together with an Android or iOS-based smart device via a Bluetooth connection.

MGE 15 to 26 kW

The product is designed for wireless communication with Grundfos GO using Bluetooth (BLE).

Via the built-in Bluetooth module, the product can communicate with Grundfos GO.

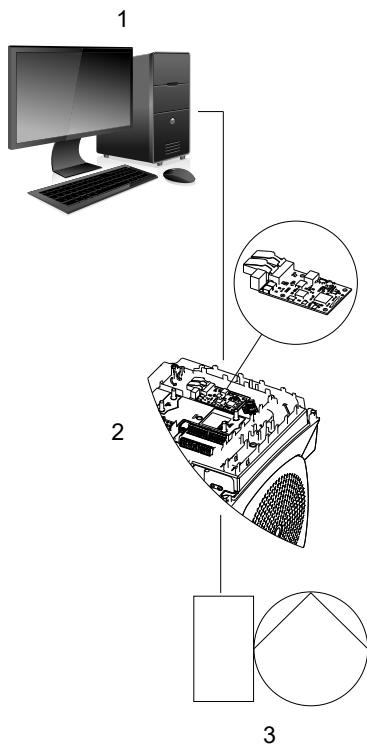

TM082930

Related information*Grundfos GO***Central management system**

Communication with the E-pump is possible even if the operator is not present near the E-pump. Communication is enabled by connecting the E-pump to a central building management system. This allows the operator to monitor the pump and change control modes and setpoint settings.

Communication between E-pumps and a central building management system is enabled via a Grundfos CIM module.

TM084691

Structure of a central management system

Pos.	Description
1	Central management system
2	CIM modules (See the section on CIM communication interface modules)
3	E-pump

Related information*CIM communication interface modules***Control modes**

E-pumps are available in two variants:

- with integrated pressure sensor
- without sensor.

E-pumps with an integrated pressure sensor

Use an E-pump with an integrated pressure sensor in applications where you want to control the pressure of the pump, irrespective of the flow rate. For further information, see the section on examples of E-pump applications.

Signals of pressure changes in the pipe system are transmitted continuously from the sensor to the pump. The pump responds to the signals by adjusting its performance up and down to compensate for the pressure difference between the actual and the desired pressure. As this adjustment is a continuous process, a constant pressure is maintained in the pipe system.

TM070573

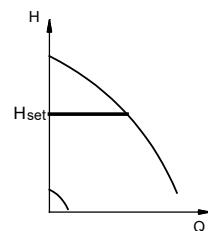

CRE, CRIE and CRNE pumps

An E-pump with an integrated pressure sensor facilitates installation and startup.

The control mode can be set to either of these:

- constant pressure (factory setting)
- constant curve.

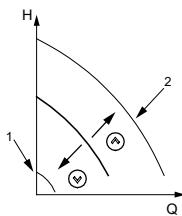

In constant-pressure mode, the pump maintains a preset pressure irrespective of the flow rate. See the figure below.

TM009322

Constant-pressure mode

In constant-curve mode, the pump is not controlled. It can be set to pump according to a preset pump characteristic curve within the range from the minimum curve to the maximum curve. See the figure below.

TM009323

Constant-curve mode

Pos.	Description
1	Min.
2	Max.

Related information*Examples of E-pump applications***E-pumps without a sensor**

E-pumps without a sensor are suitable in these situations:

- Uncontrolled operation is required.
- The sensor has been retrofitted to control the flow rate, temperature, differential temperature, liquid level and pH value at some arbitrary point in the system.

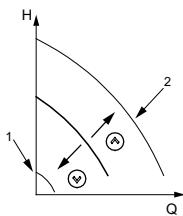

E-pumps without a sensor can be set to any of these control modes:

- constant pressure
- constant differential pressure
- constant temperature
- constant differential temperature
- constant flow rate
- constant level
- constant curve
- constant other value.

E-pumps without a sensor can be set to either of these control modes:

- controlled operation
- uncontrolled operation (factory setting).

In controlled-operation mode, the pump adjusts its performance to the desired setpoint. See the figure below.

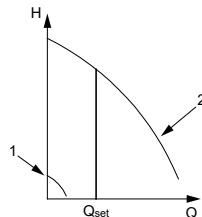

TM009323

Constant-curve mode

Pos.	Description
1	Min.
2	Max.

E-pumps can be fitted with a sensor type meeting the requirements mentioned in the Grundfos E-pumps data booklet available in Grundfos Product Center at www.grundfos.com.

TM027264

Constant-flow mode

Pos.	Description
1	Min.
2	Max.

In uncontrolled-operation mode, the pump operates according to the constant curve set. See the figure below.

9. Selection

Selection of pumps

Base the selection of pumps on these parameters:

- Duty point of the pump. See the section on duty point of the pump.
- Sizing data such as pressure loss as a result of height differences, friction loss in the pipes, pump efficiency. See the section on sizing data.
- Pump materials. See the section on pump material.
- Pump connections. See the section on pump connections.
- Shaft seal. See the section on shaft seal.

Duty point of the pump

From a duty point, you can select a pump on the basis of the curve charts in the section on performance curves and technical data.

Ideally, the duty point should match the best efficiency on the pump curve.

Related information

[Pump efficiency](#)

[CRE 1](#)

Grundfos Product Center

We recommend that you size your pump in Grundfos Product Center, which is a selection program offered by Grundfos. For further information, see the section on Grundfos Product Center.

Grundfos Product Center features a user-friendly and easy-to-use virtual guide which leads you through the selection of the pump for the application in question.

Related information

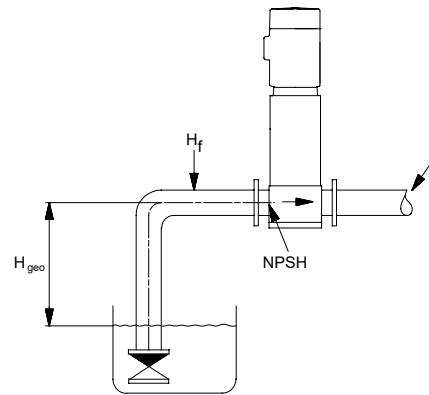

[14. Grundfos Product Center](#)

Sizing data

When sizing a pump, take these parameters into account:

- Required flow rate and pressure at the draw-off point
 - Pressure loss as a result of height differences (H_{geo})
 - Friction loss in the pipes (H_f)
- It may be necessary to account for pressure loss in connection with long pipes, bends, valves or similar.
- Best efficiency at the estimated duty point
 - NPSH value

For calculation of the NPSH value, see the section on minimum inlet pressure, NPSH.

TM026711

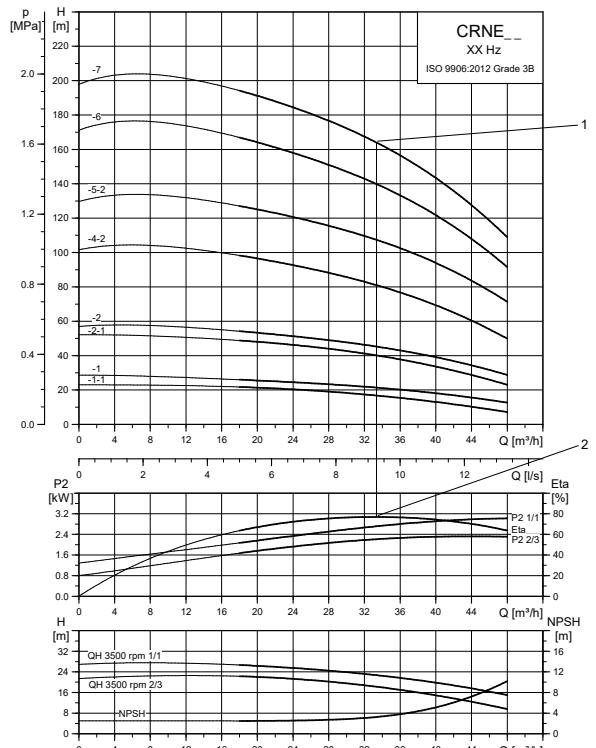

Sizing data

Pos. Description

1	Required flow rate, required pressure
---	---------------------------------------

Pump efficiency

Before determining the best efficiency point, identify the operation pattern of the pump. If you expect the pump to always operate at the same duty point, then select a pump which operates at a duty point corresponding to the best efficiency of the pump.

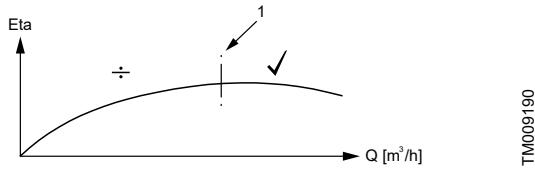

TM1040084

Example of a CRE pump's duty point

Pos. Description

1	Duty point
2	Best efficiency

As the pump is sized on the basis of the highest possible flow rate, it is important to always have the duty point to the right of the best efficiency point on the efficiency curve (η_a). This must be considered in order to keep the efficiency high when the flow rate drops.

Best efficiency

Pos.	Description
1	Best efficiency point

Affinity equations

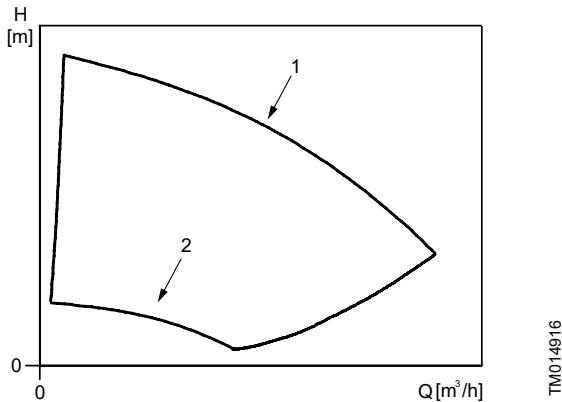

Normally, speed-regulated pumps are used in applications characterized by a variable flow rate. Consequently, you cannot select a pump that is constantly operating at its optimum efficiency.

To achieve optimum operating economy, select the pump on the basis of the following criteria:

- The maximum duty point must be as close as possible to the QH curve of the pump.
- The required duty point must be positioned so that P_2 is close to the maximum point of the QH curve.

The flow rate of the required duty point must be close to the optimum efficiency (η_a) for most operating hours.

Between the minimum and maximum performance curves, speed-regulated pumps have an infinite number of performance curves, each representing a specific speed. You may therefore not be able to select a duty point close to the maximum curve.

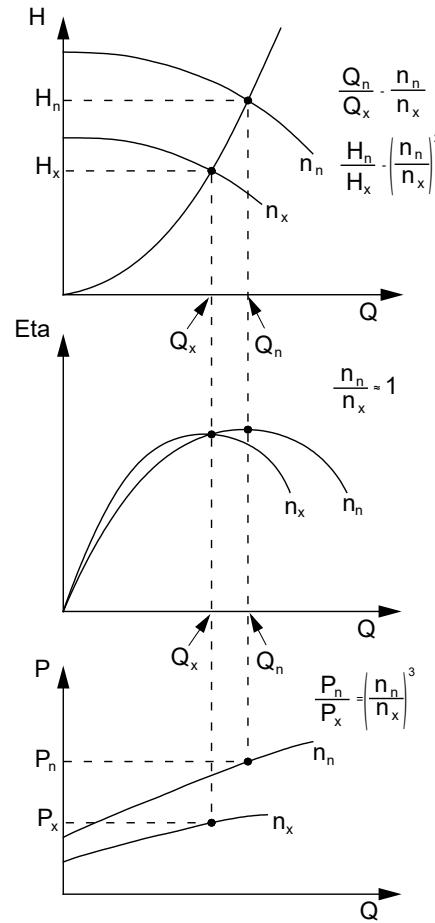

Maximum (1) and minimum (2) performance curves

In situations where you cannot select a duty point close to the maximum curve, use the affinity equations below. The head (H), the flow rate (Q) and the input power (P) are the appropriate variables for calculating the motor speed (n).

Note that the approximated formulas apply on condition that the system characteristic remains unchanged for n_n and n_x and that it is based on the formula $H = k \times Q^2$ where k is a constant.

The power equation implies that the pump efficiency is unchanged at the two speeds. In practice, this is not quite correct.

To obtain a precise calculation of the power savings resulting from a reduction of pump speed, take into account the efficiencies of the frequency converter and the motor.

Affinity equations

Legend

H_n	Rated head [m]
H_x	Current head [m]
Q_n	Rated flow rate [m^3/h]
Q_x	Current flow rate [m^3/h]
n_n	Rated motor speed [min^{-1}]
n_x	Current motor speed [min^{-1}]
η_n	Rated efficiency [%]
η_x	Current efficiency [%]
P_n	Rated power [kW]
P_x	Current power [kW]

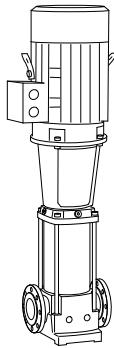

Pump material

Select the material variant on the basis of the liquid to be pumped.

The product range covers the following basic types:

- CRE, CRIE: Use CRE, CRIE pumps for clean, non-aggressive liquids such as potable water and oils.

- CRNE: Use CRNE pumps for industrial liquids and acids. See the section on pumped liquids, or contact Grundfos.

CR pump

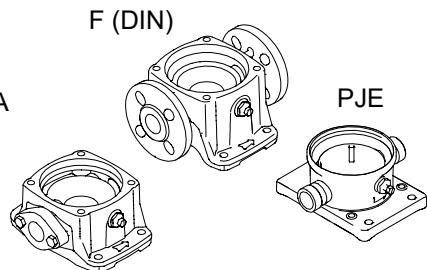

Related information

Pumped liquids

Pump connections

Selection of a pump connection depends on the rated pressure and pipes. To meet any requirement, the pumps offer a wide range of flexible connections, such as the following:

- oval flange A (BSP)
- DIN flange
- PJE coupling
- clamp coupling
- union (+GF+)
- other connections on request.

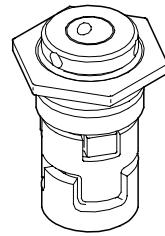

Pump connections

Shaft seal

As standard, the product range is fitted with a Grundfos shaft seal (cartridge type) which is suitable for the most common applications.

The following key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature
- maximum pressure.

Shaft seal (cartridge type)

TM012100

TM020538

We offer a wide range of shaft seal variants to meet specific demands according to the pumped liquid.

Servicing shaft seals

Replacement shaft seals are available as complete service kits²⁷⁾.

Shaft seals fitted on CR, CRN 125-155 pumps with Ø28 mm or Ø36 mm shaft ends are serviceable. This means that the wear parts in these shaft seals are available as service kits²⁷⁾ and can be replaced without having to renew the complete shaft seal.

Operating pressure and inlet pressure

Do not exceed the limit values for these pressures:

- maximum operating pressure
- maximum inlet pressure.

Minimum inlet pressure, NPSH

We recommend calculating the inlet pressure "H" in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the inlet side of the pump.

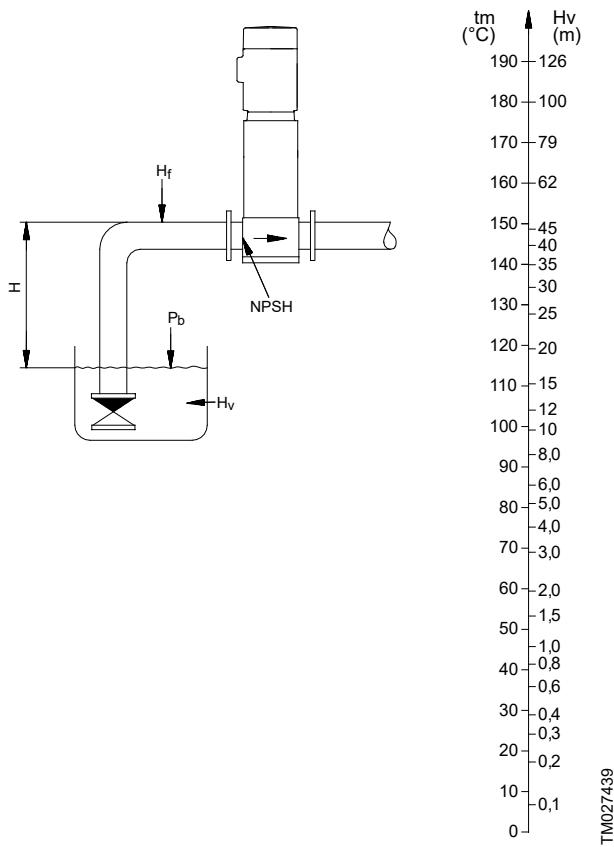

The maximum suction lift "H" in metres head can be calculated as follows:

H	= $p_b \times 10.2 - NPSH - H_f - H_v$
p_b	= Barometric pressure in bar. p_b can be set to 1 bar at sea level. In closed systems, p_b indicates the system pressure in bar.
NPSH	= Net Positive Suction Head in metres head. To be read from the NPSH curve at the highest flow the pump will be delivering.
H_f	= Friction loss in inlet pipe in metres head at the highest flow the pump will be delivering.
H_v	= Vapour pressure in metres head To be read from the vapour pressure scale. H_v depends on the liquid temperature t_m .

If the calculated "H" is positive, the pump can operate at a suction lift of maximum "H" metres head.

If the calculated "H" is negative, an inlet pressure of minimum "H" metres head is required.

²⁷⁾ All service kits include detailed instructions on how to carry out the replacement.

Minimum inlet pressure, NPSH

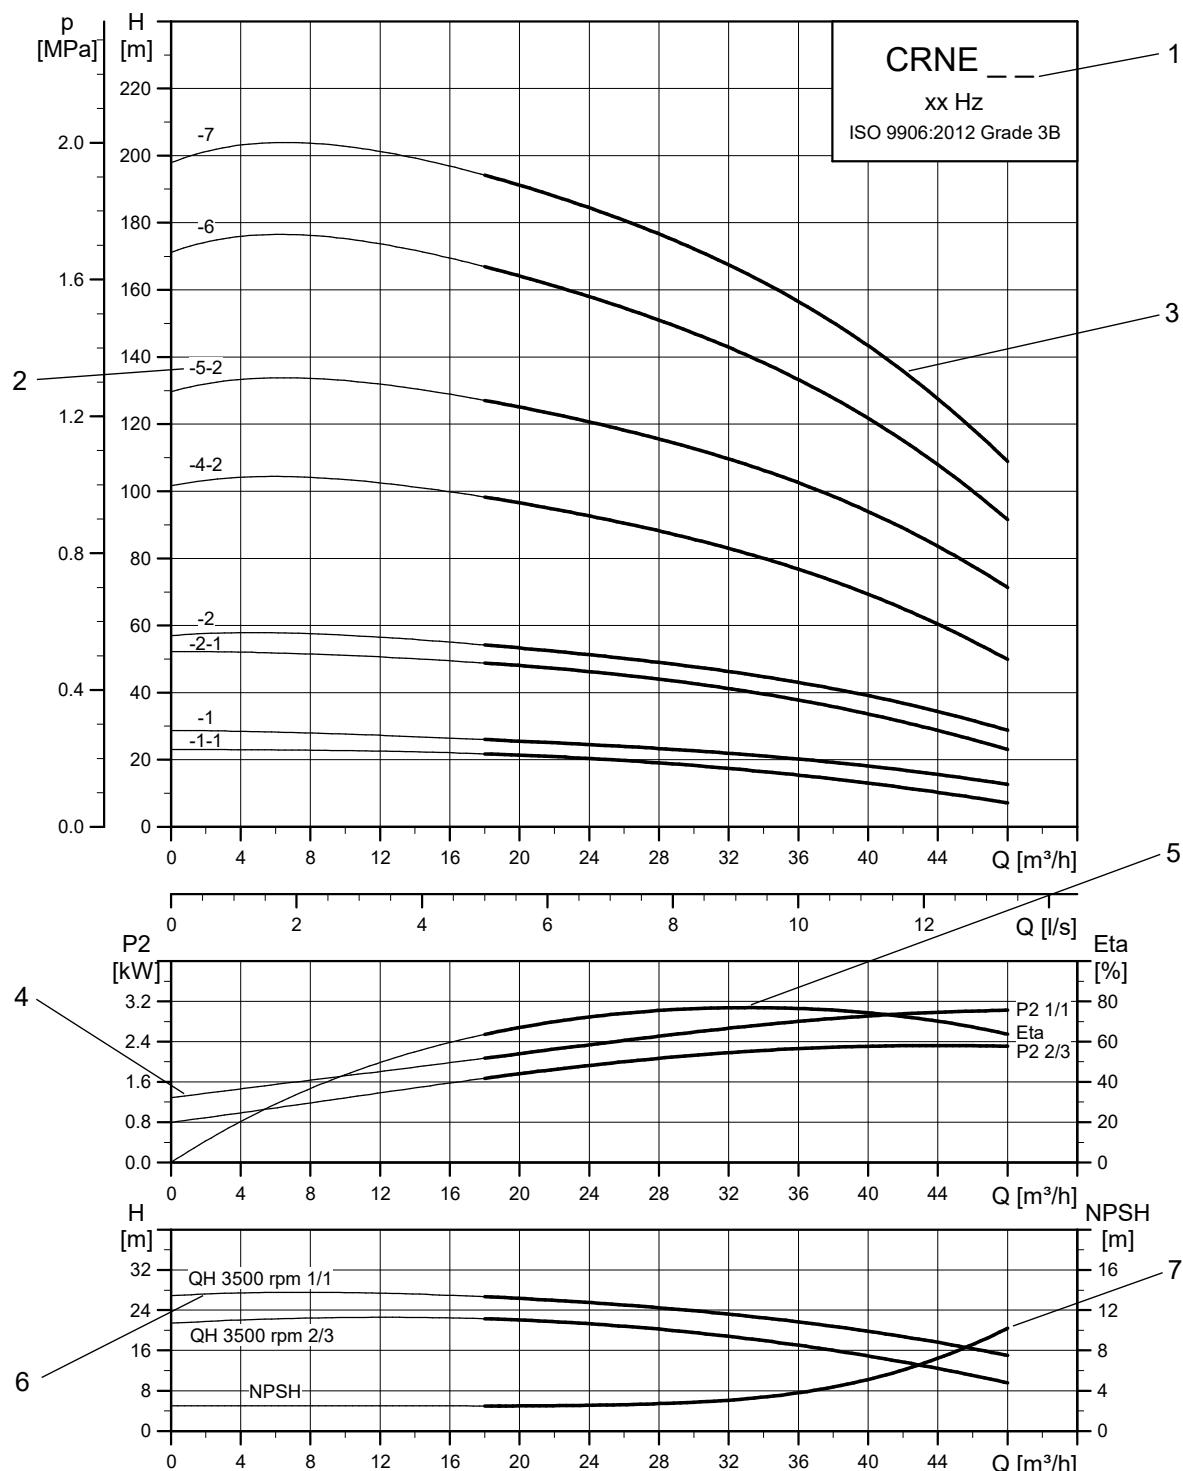

To avoid cavitation, never select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow.

How to read the curve charts

Pos. Description

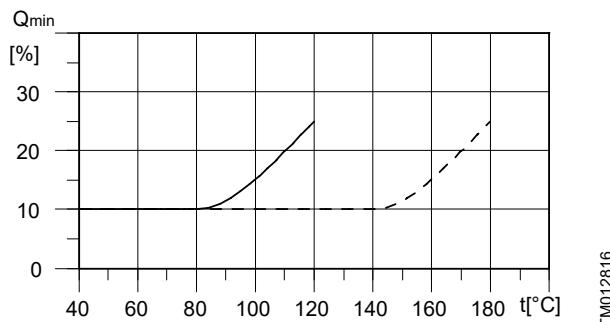

- 1 Pump type. Frequency. ISO standard.
- 2 Number of stages. First figure: number of stages. Second figure: number of reduced-diameter impellers.
- 3 QH curve of the individual pump. The bold curves indicate the recommended duty range for best efficiency.
- 4 The power curves indicate pump input power per stage. Curves are shown for full (1/1) and for reduced-diameter (2/3) impellers.
- 5 The eta curve shows the efficiency of a pump with an average number of stages. The efficiency of pumps with reduced-diameter impellers is approximately 2 % lower than the eta curve shown in the chart.
- 6 QH curve for each individual impeller. Curves are shown for full (1/1) and for reduced-diameter (2/3) impellers.
- 7 The NPSH curve is a maximum curve for all the variants shown.

Guidelines to performance curves

The guidelines below apply to the performance curves:

- Tolerances to ANSI or ISO standards, such as ISO 9906:2012, Grade 3B, if indicated on the curve chart.
- The motors used for the measurements are standard Grundfos-specified motors.
- Measurements have been made with airless water at a temperature of 20 °C.
- The curves apply to the following kinematic viscosity: $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt).
- Due to the risk of overheating, the pumps must not be used at a flow rate below the minimum flow rate.
- The QH curves apply to a rated motor speed of a three-phase mains-operated motor. For realistic curves, go to Grundfos Product Center (<http://product-selection.grundfos.com>) and insert data.

The curve below shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature. The dotted line shows a CR pump fitted with an air-cooled top assembly.

Pumps fitted with single-phase MGE motors (0.37, 0.55, 0.75 or 1.1 kW) can as an option be fitted with three-phase MGE motors.

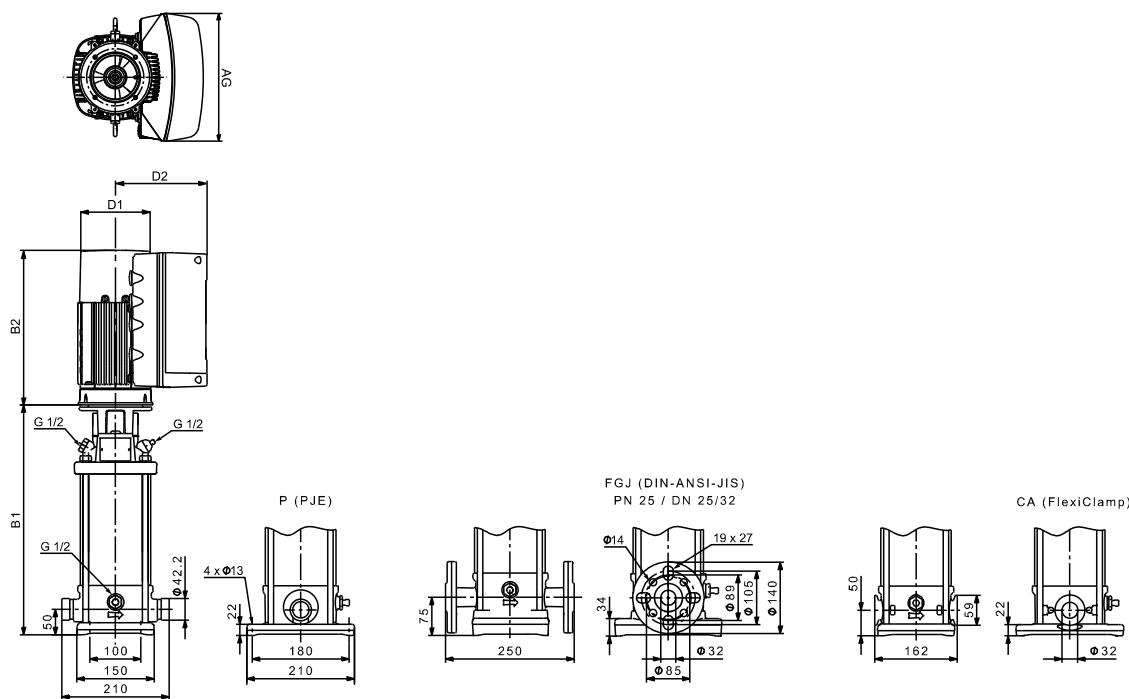

Pumps fitted with 1.5 kW three-phase MGE motors can as an option be fitted with single-phase MGE motors.

See Grundfos Product Center for dimensions.

²⁸⁾Pumps are normally fitted with three-phase MGE motors. Dimension tables in the section on performance curves and technical data show pumps with three-phase MGE motors.

12. Accessories

Pipe connection

Various sets of counterflanges and couplings are available for pipe connection.

Adapter kit

DN 150 flanges are available for CRE, CRNE 125 and 155 pumps. To use DN 150 flanges, you must order two adapter kits per pump.

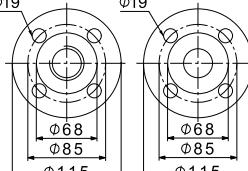

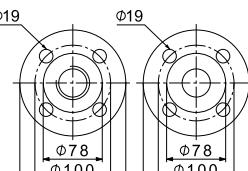

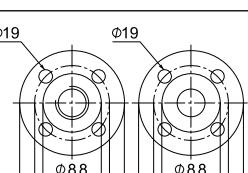

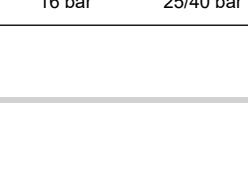

Pump type	Pipe connection	Adapter kits required	Product number	Adapter kit
CRE 125	150 mm, nominal	2	96638169	
CRE 155	150 mm, nominal	2	96638180	
CRNE 125				
CRNE 155				

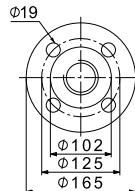

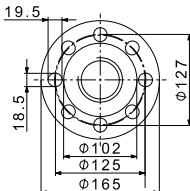

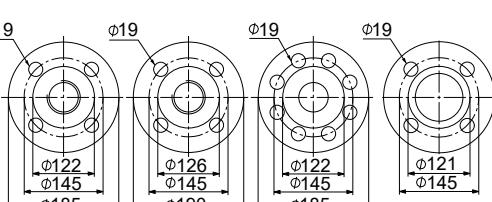

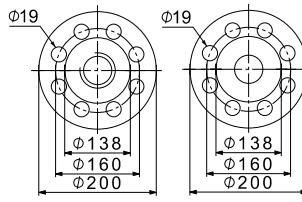

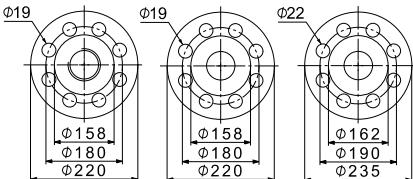

We offer an optional 6-inch pump base for the CRN 95, 125 and 155 pump ranges with DN 150 connections according to DIN, ANSI and JIS standards. This base eliminates the need for an adapter kit.

For more information, see the data booklet for CR Custom-built pumps in Grundfos Product Center at www.grundfos.com.

Potentiometer

The potentiometer is suitable for setpoint setting and start and stop of the CRE, CRIE, CRNE pump.

Product	Product number
External potentiometer with cabinet for wall mounting	625468

EMC filter

The EMC filter is required when 11 to 22 kW E-pumps are installed in residential areas.

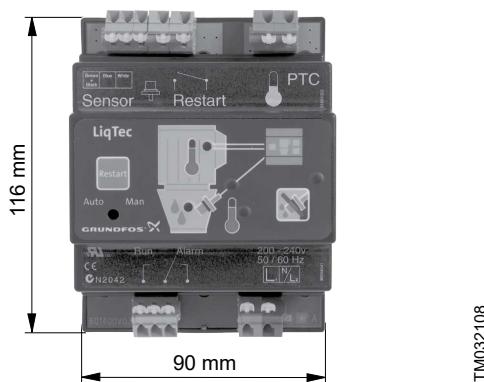

Product	Product number
EMC filter (11 kW)	
EMC filter (15 kW)	
EMC filter (18.5 kW)	96478309
EMC filter (22 kW)	

LiqTec

The LiqTec dry-running protection unit protects the pump and process against dry running and temperatures exceeding $130 \pm 5^\circ\text{C}$. Connected to the motor PTC sensor, LiqTec also monitors the motor temperature.

LiqTec is prepared for DIN rail mounting in control cabinets.

Enclosure class: IPX0.

30) For more information about the VFI sensor, see the Grundfos Direct Sensors™ data booklet, publication number 97790189 in Grundfos Product Center at www.grundfos.com.

Grundfos pressure sensor kits

Content	Liquid temperature	Pressure [bar]	Product number
Grundfos pressure transmitter, type ISP44, with 2.5 m cable. Connection: G 1/2 A (DIN 16288 - B6kt) Quick guide	-40 to +100 °C ³¹⁾	0-4	92618271
		0-6	92652122
		0-10	92652150
		0-16	92652152
		0-25	92618276

31) Liquid temperature ranges from -40 to +130 °C at ambient temperatures up to 25 °C.

DPI differential-pressure sensor kit

Content	Pressure [bar]	Product number
1 sensor incl. 0.9 m screened cable (7/16" connections)	0 - 0.6	96611522
1 original DPI bracket for wall mounting	0 - 1.0	96611523
1 Grundfos bracket for mounting on motor	0 - 1.6	96611524
2 M4 screws for mounting of sensor on bracket	0 - 2.5	96611525
1 M6 screw (self-cutting) for mounting on MGE 90/100	0 - 4.0	96611526
1 M8 screw (self-cutting) for mounting on MGE 112/132	0 - 6.0	96611527
3 capillary tubes (short/long)		
2 fittings (1/4" - 7/16")	0-10	96611550
5 cable clips (black)		
Installation and operating instructions (00480675)		
Service kit instructions.		

Adjustable anti-vibration feet

Adjustable anti-vibration feet

TM043245

The adjustable support foot reduces any vibrations from the system to the floor, allowing the system to be height-adjusted by ± 20 mm.

Description	Pump type	Product number
	CR(I)E 3 and 5	96412344
1 pcs. anti-vibration foot	CR(I)E 10 to 20	96412345
	CRE 32 to 95	96412347

Remote controls

Grundfos GO

Use Grundfos GO for the following types of wireless communication with the pump:

- infrared
- radio
- Bluetooth.

MGE 0.37 to 11 kW

These motors will connect to the pump through wireless infrared or radio communication.

MI 301

MI 301 is a module with built-in infrared and radio communication. It is required for Grundfos GO communication. MI 301 can be used together with Android or iOS-based smart devices with a Bluetooth connection. MI 301 has a rechargeable Li-ion battery and must be charged separately.

TM053890

MI 301

Supplied with the product:

- Grundfos MI 301
- sleeve
- battery charger
- quick guide.

Product numbers

Grundfos GO variant	Product number
Grundfos MI 301	98046408

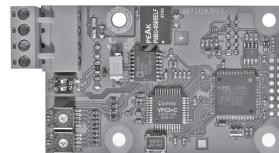

MGE 15 to 26 kW

These motors will connect to the pump via Bluetooth (BLE).

CIM communication interface modules

GR6121

Grundfos CIM communication interface module

The CIM modules enable communication of operating data, such as measured values and setpoints, between the pumps and a building management system. The CIM modules are add-on communication modules which are fitted in the terminal box of the pumps.

Note that CIM modules must be fitted by authorised persons.

We offer the following CIM modules:

CIM 100

For communication via LONWorks.

CIM 150

For communication via PROFIBUS DP.

CIM 200

For communication via Modbus RTU.

CIM 300

For communication via BACnet MS/TP.

CIM 500

Ethernet module for communication via PROFINET, Modbus TCP, BACnet IP, EtherNet/IP GRM IP, Grundfos iSOLUTIONS Cloud.

Available CIM modules

Description	Fieldbus protocol	Product number
CIM 100	LONWorks	96824797
CIM 150	PROFIBUS DP	96824793
CIM 200	Modbus RTU	96824796
CIM 300	BACnet MS/TP	96893770
CIM 500	Ethernet	98301408
Antenna (puc)	3G/4G	99518079

For further information about data communication via CIM modules and fieldbus protocols, see the CIM documentation available in Grundfos Product Center at www.grundfos.com.

13. Variants

Different variants are available on request.

Although the Grundfos CRE, CRIE, CRNE product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs. See the following documents:

- Grundfos "CR Custom-built pumps" data booklet
- Grundfos "CRN high pressure" data booklet.

Find below the range of options available for customising the CRE pumps to meet the customers' demands.

Contact Grundfos for further information or for requests other than the ones mentioned below.

Motors

Variant	Description
Oversize motor	Ambient temperatures above 50 °C or installation at altitudes of more than 1000 metres above sea level require the use of an oversize motor, such as derating.
Low speed motor	We offer low speed (2000 rpm) motors.
IP66	The motor is completely dust-proof. The motor is protected against heavy seas or high-pressure water jets from any direction.
IT network (Earthing system)	This motor variant is designed for supply by an electric distribution system which has no connection to earth. This type of earthing system is called an IT network.
Advanced display	The pumps can be fitted with an HMI 301 operating panel as an option. The operating panel does not include a radio module.
Standard display	The pumps can be fitted with an HMI 201 operating panel as an option. The operating panel does not include a radio module.
Simple display	The pumps can be fitted with HMI 100 or HMI 101 operating panel as an option. HMI 100 includes a radio module. HMI 101 does not include a radio module. Grundfos GO is required to configure and set the pump.
Standard functional module (FM 200)	We offer FM 200 as an alternative to FM 300, fitted as standard. FM 200 offers fewer in- and output options compared to FM 300. The module has these connections: <ul style="list-style-type: none"> • two analog inputs • two digital inputs or one digital input and one open-collector output • Grundfos Digital Sensor input and output • two signal relay outputs • GENibus connection.

Shaft seals

Variant	Description
Shaft seal with FFKM O-ring	We recommend shaft seals with FFKM or FXM O-ring for applications where the pumped liquid may damage the standard O-ring material.
Seal with flush, quench seal	We recommend seals with flush/quench seals for applications involving crystallising, hardening or sticky liquids.
Air-cooled shaft seal system	We recommend air-cooled shaft seal systems for applications involving extremely high temperatures. No conventional mechanical shaft seal can withstand liquid temperatures of up to 180 °C for any length of time. To ensure a low liquid temperature around the standard shaft seal, the pump is fitted with a special air-cooled shaft seal chamber. No separate cooling is required.
Double seal with pressure chamber	We recommend double seals with pressure chamber for applications involving poisonous or explosive liquids. It protects the surrounding environment and the people working in the vicinity of the pump. It consists of two seals mounted in a back-to-back arrangement inside a separate pressure seal chamber. As the pressure in the chamber is higher than the pump pressure, leakage is prevented. A dosing pump or a special pressure intensifier generates the seal chamber pressure.
CR MAGdrive	Magnetically driven pumps for industrial applications. Key applications are industrial processes involving the handling of aggressive, environmentally dangerous or volatile liquids, for example organic compounds and solvents.

Pumps

Variant	Description
Horizontally mounted pump	For safety or height reasons, certain applications, for instance on ships, require the pump to be mounted in a horizontal position. For easy installation, the pump is fitted with brackets that support motor and pump.
Low-temperature pump	Exposed to temperatures down to -40 °C, coolant pumps may require neck rings with a different diameter in order to prevent impeller drag.
High-speed pump up to 47 bar	For high-pressure applications, we offer a unique pump capable of generating a pressure of up to 47 bar. The pump is fitted with a high-speed motor, type MGE. The direction of rotation is the opposite of that of standard pumps, and the chamber stack is turned upside-down, as a result of which the pumped liquid flows in the opposite direction.
High-pressure pump up to 47 bar	For high-pressure applications, we offer a unique double pump system capable of generating a pressure of up to 47 bar.
Low-NPSH pump (improved suction)	We recommend the Low-NPSH pump for boiler-feed applications where cavitation may occur due to poor inlet conditions.
Pump with bearing flange	The bearing flange is suitable for applications where the inlet pressure is higher than the maximum pressure recommended. The bearing flange increases the life of motor bearings. We recommend this pump for standard motors.
Pump for pharmaceutical and biotechnological applications	CRNE pumps designed for applications requiring the sterilisation and CIP capability of pipes, valves and pumps. (CIP = clean-in-place).

Connections and other variants

Variant	Description
Pipe connections	In addition to the wide range of standard flange connections, a 16 bar DIN standard clamping flange is available. Customised flanges are available according to specifications.
TriClamp connection	TriClamp connections are of a hygienic design with a sanitary coupling for use in the pharmaceutical and food industry.
Electropolished pump	To substantially reduce the risk of corrosion of the materials. For use in the pharmaceutical and food industry.

14. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

From the international view, you can select your specific country to view the product range available to you.

International view: <https://product-selection.grundfos.com>

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc., in PDF format.

When you select your country, you will see the menus below. Note that some menus may not be available depending on the country.

Example: <https://product-selection.grundfos.com/uk>

Pos. Description

- 1 **Products & services** enables you to find products and documents by typing a product number or name into the search field.
- 2 **Applications** enables you to choose an application to see how Grundfos can help you design and optimise your system.
- 3 **Products A-Z** enables you to look through a list of all the Grundfos products.
- 4 **Categories** enables you to look for a product category.
- 5 **Liquids** enables you to find pumps designed for aggressive, flammable or other special liquids.
- 6 **Product replacement** enables you to find a suitable replacement.
- 7 **WWW** enables you to select the country, which changes the language, the available product range and the structure of the website.
- 8 **Sizing** enables you to size a product based on your application and operating conditions.

Grundfos GO

Mobile solution for professionals on the GO!

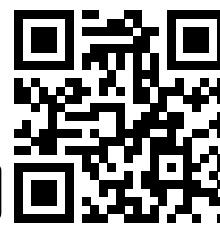

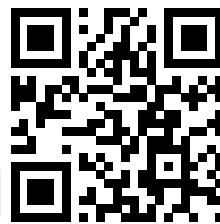

Grundfos GO is the mobile tool box for professional users on the go. It is the most comprehensive platform for mobile pump control and pump selection, including sizing,

replacement and documentation. It offers intuitive, handheld assistance and access to Grundfos online tools, and it saves valuable time for reporting and data collection.
