## CERAMIC COATING

## CERAMIC COATING

HAMMER ROO CERAMIC COATINGS ARE SCIENTIFICALLY FORMULATED TO PENETRATE MICROSCOPIC SURFACE PORES TO PROVIDE A BONDING LAYER OF PROTECTION THAT IS INCREDIBLY STRONG AND RESILIENT.

CERAMIC COATINGS ARE IDEAL IN PREVENTING AND MINIMIZING SURFACE DAMAGE INCLUDING: ABRASION, CHEMICAL STAINS, UV DAMAGE AND OXIDATION.

### APPLICATION INSTRUCTIONS

INCREASED WATER RESISTANCE

STRONG UV PROTECTION

INCREASED CHEMICAL RESISTANCE

HIGH FILM HARDNESS (9H)

  
HammerRoo

# 9H CERAMIC COATING

## PREPARATION

MAKE SURE THE SURFACE IS CLEAN & DRY. ALLOW PREVIOUS COATINGS TO COMPLETELY CURE BEFORE APPLICATION OF CERAMIC COATING.

## APPLICATION

WRAP THE MICROFIBER CLOTH OVER APPLICATOR SPONGE.

APPLY A SMALL AMOUNT OF CERAMIC COATING TO THE MICROFIBER CLOTH AND APPLY USING A CROSS HATCH PATTERN.

WORK IN 40CM X 40CM SECTIONS.

## TIP:

OUTLINE THE PERIMETER & THEN FILL THE INSIDES OF THE PERIMETER.

FIRST GO WITH THE GRAIN, THEN GO AGAINST IT. ALTERNATE FOR EVERY PASS.

## APPLICATION

ONCE THE CERAMIC COATING STARTS TO DRY IT WILL GIVE MORE RESISTANCE (WITHIN 1 - 3 MINS DEPENDING ON TEMPERATURE).

AT THIS POINT FINISH THE PASS THEN USE A CLEAN MICROFIBER CLOTH TO EVEN OUT FINISH USING SAME ALTERNATING CROSS HATCH PATTERN.

## TIP:

USE LIGHT PRESSURE ONLY - THE WEIGHT OF YOUR HAND IS ENOUGH. EXCESSIVE PRESSURE WILL REMOVE CERAMIC COATING.

ONCE FINISHED THE WHOLE SURFACE EVEN OUT USING CLEAN MICROFIBER CLOTH AS ABOVE.

REPEAT PROCESS FOR ADDITIONAL COATS. WE RECOMMEND 2-3 COATS OR UNTIL DESIRED FINISH IS ACHIEVED.

COVERAGE APPROX. 5ML/M2 PER COAT  
RECOATABLE AFTER 1 HOUR  
TOUCH DRY AFTER 24 HOURS  
DO NOT EXPOSE TO WATER WITHIN 24 HOURS.  
WAIT 3 DAYS BEFORE EXPOSING TO WATER FOR OPTIMAL RESULTS

## MAINTENANCE

CLEAN WITH SLIGHTLY DAMP CLOTH OR PH NEUTRAL SOLUTION. IF SCRATCHES APPEAR OVER TIME, REAPPLY AS NEEDED.

## SAFETY

ALWAYS USE PROPER SKIN PROTECTION.  
APPLY IN A WELL VENTILATED AREA AWAY FROM DIRECT SUNLIGHT SUCH AS GARAGE OR SHADED AREA.  
DO NOT INGEST.
