

Handling of Body Fluids

MANCHESTER
1824

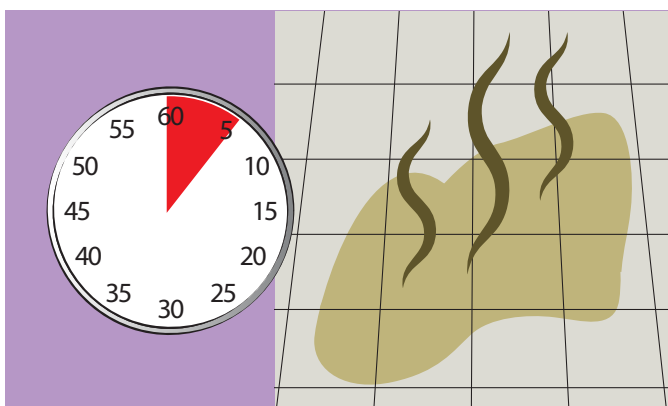

- 1** When you find a body fluid spillage, secure the area, and alert the Local Management team, who will carry out an assessment.

- 2** Once an assessment has been completed, and the Management team are satisfied that it can be cleaned internally, staff who have been trained in cleaning such spills will be tasked with cleaning the area.

- 3** A Body Fluid kit will be found in every Housekeeping Office and the procedures/product usage guides will be found in the Wisdom Box. Colour coded cleaning practices are still in place to prevent cross-contamination.

- 4** Aim to clean the spillage quickly and effectively before it can dry out and cause staining or malodours.

- 5** If there are sharps present do not attempt to clean the spillage without following the sharps procedure.

- 6** For spillages caused out of hours revert to the out of hours cleaning contractor which is accessed by Security and the ResLife team.
