

## **APOLLO 1/2"** **INSTALLATION INSTRUCTIONS**

PORTABLE BOTTLE-TOP FOR CONDITIONING  
OF WATER AND OTHER LIQUIDS

This device is supplied in Chrome, or 24 carat Gold plated with 2 x 1L bottles, and 2 spare rubber washer inserts to seat the tops of the bottles. These rubber washers may need replacing every two years. The device will also perform when held under a tap (to fill a water bottle as illustrated in the right image) and allow a distance from the tap for the water to vortex into the device.

The device can be used for a wide range of liquids, eg. wine, milk, juices, essential oils, etc.

---

**Step 1:** Step 1: place 750-800ml of liquid into the bottle and screw on the bottle top device (Apollo) until it grips, but not too tight.

**Step 2:** Screw on the second bottle as illustrated above.

**Step 3:** Grip the bottom and top of the bottles with a firm grip, turn it upside-down, keeping the bottom bottle steady on a bench top, and then instantaneously turn the top bottle anti-clockwise 2-3 times to initiate a vortex (see left image above). Allow the liquid to vortex to the bottom bottle.

**Step 4:** Repeat Step 3 another 3 times, and then the liquid will have its maximum negative (-mV) charge. If the liquid is wine, then transfer to a wine decanter as shown above and leave to rest before drinking. The wine will not oxidise and turn to vinegar once it has a permanent negative charge.

*Enjoy all the benefits of your MEA water device!*
