

Why are the Phion water devices unique and different from other water restructuring devices?

Introduction

There are many devices on the market that claim to produce structured water, and this is true, in most cases. However, the patented Phión water restructuring devices sustain a **permanent negative charge** in the water. This capability is a defining factor in differentiating value for money, for most people.

The purpose of this essay is to describe the defining differences between a Phión water restructuring device and other devices that restructure water.

Context

The **Phión philosophy** is centred on developing and using the knowledge of natural healing. Ancient cultures survived and flourished on this knowledge.

Humans, like all living species, have a natural system for cell regulation and healing. One of the reasons that health in Western society is declining at a rapid rate, including a decline in longevity since about 2002, is that humans are becoming removed from nature and losing knowledge about natural healing, or disease avoidance. There is now a heavy reliance on *Rockefeller* medicine that emerged in 1910 as the panacea for disease cures and prevention. Unfortunately, this form of unnatural medicine does not heal or restore wellbeing. It does the complete opposite. All pharmaceutical drugs are toxic or have adverse health effects.

Nature provides all the **syntropy** (healing) energy that humans need in the form of structured water, sunlight energy (and other natural subtle energies from nature), plant and animal nutrients. Humans have evolved and adapted to the consciousness of water, microbes, plants and animals for survival. Human consciousness has many dimensions in nature: physical, emotional, spiritual or cultural connections. All humans are descendants of this *root consciousness*. Consequently, humans are healthy by design (*the geometry and consciousness of life energy*) and sick by default. The default is the degree of separation of cellular energy from natural energies: our ancestral roots.

Essentially, humans have become lost and separated in the *concrete jungle* of technology, pharmaceutical drugs, the *chemical soup or smog*, and the toxicity and stresses that these unnatural and decaying (**entropy**) forces have on cell health.

Ill-health happens when that balance between contact with nature and natural healing is lost and we are then in conflict with nature. The Earth is in a downward spiral of degradation that is reflected through loss of natural systems, food integrity, happiness, independence (freedom of choice), equity in society and the economy; and an increase in unhappiness (anxiety and depression), conflicts, contamination of soil, water and air; sickness and disease.

The unfortunate aspect of this degradation is that people have become accustomed to the current rates of disease (breast cancer is now occurring with 1 of 8 women). Consequently, people no longer relate to the real world, and these rates are escalating at an alarming rate due to generational changes in diet and lifestyle factors; exacerbated by the degradation issues (eg. toxicity) mentioned above.

This essay describes in part, a pathway for a more intimate relationship with nature and particularly the natural state of water, and its healing capacity. Self-knowledge about natural healing is the pathway to self-regulation and self-healing. Further elaboration of this issue starts on page 4.

Why is a negative charge important in cell water?

Phión has patented water devices to produce a **permanent negative charge in water**. Daily consumption of this **negative charge of structured water activates cell negative charge** due to a higher rate of cell hydration (ie. the smaller cluster of water molecules in structured water enables water entry through the cell membrane).

All natural, flowing (vortexing) water systems carry a negative charge. This charge changes polarity to a positive charge when the water is still (not flowing). All life has cells that operate at their highest potential when the cell charge is negative (usually about -50mV or above). That is, cell capacity for regulation, healing and renewal is at its fullest potential (anti-aging).

All disease starts when the cell charge changes polarity to a positive charge. This is the cell state when it loses its protection and integrity. That is, it has lost its life-force energy (syntropy force) and the decaying forces (entropy) are in full flight.

The human body requires daily nourishment with syntropy forces to prevent cellular decay and dysfunction. These forces include:

- Negatively charged, structured water
- Fresh, organic food
- Sunlight
- Natural environments (natural wave energies and frequencies of nature)
- Love, joy and hope emotions
- Music in 432 Hz (download from *YouTube and Spotify*)
- Spiritual or cultural connection to the *land*.

Daily connection with these forces builds harmony and coherence in cell function and establishes balance to body organs and systems for wellbeing.

Permanent negative charge enables continuous entrainment of syntropy energies

Life and wellbeing runs on energy. This energy can be decaying (entropy) or life-affirming (syntropy). We all have choices to choose which force to feed our cells.

Water in a structured form with a high negative charge potential (eg. at least 50mV) has a greater capacity to receive, store (memory) and transmit information. It is this water state that enables the entrainment of syntropy energies.

For example, all fresh food that has been harvested within 60 hours contains negatively charged water (its natural state when connected to its life support system: soil, plant, etc). This charged water carries the nutrient minerals in a colloidal form (ie. within the water and attached to water molecules). This natural, life-affirming state in food is an important form of syntropy energy for cell function, and therefore the coherence and full expression of DNA that is surrounded by structured water.

All syntropy energies are life-affirming and restore wellbeing. For example, each mineral within the Earth, and therefore within food and water, vibrates with a specific band of frequency within the full electromagnetic spectrum of the planet. You can think of these frequencies like the colour bands in a rainbow, though the colour of a gemstone does not necessarily reveal its resonant (healing) frequency. Some minerals vibrate at a very specific and narrow range of frequencies. Other minerals can carry an expanded range of energy. Together, these minerals act to distribute and regulate the energetic field of the Earth and universe, ensuring that *Gaia* aura remains vibrant and healthy. Gaia was the Greek Goddess of the Earth (*Mother Earth*)

Crystals and stones carry the entire spectrum of **Light Energy** available to us: from low-frequency energies we equate with the physical realm, to the higher frequencies we equate with spiritual awakening.

When we bring a crystal or gemstone into our electromagnetic field, two things occur. Firstly, the electromagnetic frequencies carried by that gemstone will vibrate with the frequencies in our own (cell) energy field through the physical law of resonance, creating a larger field of vibration. This process is called **entrainment**, and the structured water in cells has a very high capacity for entrainment. Consequently, your nervous system is attuned to these shifts in energy and will transmit this information to your brain (through the Vagus nerve, as brain entrainment), where the frequencies stimulate biochemical shifts that affect the physical body, trigger emotional experiences and shift brain function to open you to spiritual experiences.

Secondly, the tiny particles of minerals in your body that also carry that frequency will move into resonance with the particles of minerals in the stone. This causes your body to believe that you have more of that mineral in your body and it will react accordingly with additional biochemical shifts. For instance, if you are holding a calcium-based stone, the calcium particles

in your own body will be *activated* by moving into resonance with the calcium in the stone. This will create a third, stronger energetic field that carries the calcium energy signature. Your brain receives this information through the nervous system and reacts accordingly. This process adjusts your biochemistry as if you had more calcium in your physical system. **Phi'on** has created this effect by aging its special magnesium oil over 2-3 years, whereby the calcium and strontium minerals increases in solution by 20-fold. Consequently, this entrained energy may trigger physical healing of calcium-imbalance-based illnesses, or it may trigger emotional or even spiritual experiences.

Structured water effects on DNA

DNA (deoxyribonucleic acid) is a biomolecule that holds the blueprint for how living organisms are built. DNA is made of two long, twisted strands that contain complementary genetic information. A gene is a segment of DNA that is passed down from parents to children and confers a trait to the offspring. Genes are organized and packaged in units called *chromosomes*. Humans have 23 pairs of chromosomes. One set of chromosomes for each pair comes from a person's mother, and the other set of chromosomes comes from the father

DNA looks the same in every organism on Earth. All living things have DNA, regardless of whether it comes from a human, animal or plant: it is all the same molecule. However, it is the order of the letters in the code that makes each organism different. The order of building blocks in a strand of DNA makes up a *sequence*. We can read a DNA sequence like letters in a book. In fact, we know the sequence of the entire human genome: 3 billion letters. Within the 3 billion letters of the human genome are about 21,000 genes. Most of our known **genes, code for proteins**, but some code for RNA (Ribonucleic acid) molecules.

All humans have the same genes arranged in the same order. More than 99.9% of our DNA sequence is the same. However, the few differences between us (1.4 million of them) are enough to make each one of us unique. On average, a human gene will have 1-3 bases that differ from person to person. These differences can change the shape and function of a protein, or they can change how much protein is made, when it's made, or where it's made. DNA and genetic information is surrounded by **structured water** in cells.

Genetic conditions are caused, in whole or in part, by a change in a person's DNA sequence. Genetic conditions can be caused by a mutation in one or multiple genes, by a combination of **gene mutations and environmental factors**, or by **damage to chromosomes**. Some **genetic conditions are inherited, while others occur spontaneously** (largely through environmental experiences from diet and lifestyle). Changes in gene expression are a result of changes in the charge of structured water in cells.

The mitochondria in cells are the energy conversion factories of the cell. The intracellular organelles transform the food we eat and the air we breathe into an **electric potential** that drives processes like **DNA replication or protein building**. While, the impact of any given mitochondrion is small, the potential energy within a cell is about 200 mV, and collectively the

potential energy within a human body is roughly equivalent to a lightning bolt. Mitochondria generate more than 90% of cellular energy, and this fact says something significant about the role of cell energy and the charge of the structured water that surrounds the mitochondria.

Recent studies suggest that mitochondrial DNA variations could lead to everything from autism, cancer and inflammation to neurodegenerative diseases. For example, one recent study, conducted by the Memorial Sloan Kettering Cancer Center and the Boston-based Cambridge Institute, suggests in many types of cancer, tumor cells have fewer copies of mitochondrial DNA than the cells that make up normal tissues. The researchers also discovered that the number of copies of mitochondrial DNA in certain tumors is related to the incidence of mutations that cause cells to become cancerous. This is further evidence that the loss of cellular charge is a pathway to disease.

Mitochondrial DNA also plays a role in aging. Over time, we accumulate more and more mitochondrial-DNA mutations that slowly erode our energetic capacity. As people get older, they often complain that they don't have the energy that they used to, and this is due to a loss of cellular charge. More important, their cells and organs don't have the energy they need to function and maintain themselves. This could lead to age-related diseases, such as Alzheimer's and Parkinson's. Also, the energy-intensive organs, like the brain use 20% of the body's energy, and any change in energy output can have a profound effect on organ function.

However, the mitochondria and for all the energy they contribute, have been largely overlooked in medicine. All the clinical subspecialties are based primarily around gene mutations. Therefore, the neurologists, ophthalmologists, cardiologists, nephrologists, dermatologists and so on, have a model that does not consider mitochondria, and cell charge. Since different body organs and systems rely on mitochondrial energy to different extents, partial mitochondrial defects result in organ-specific symptoms. The medical system only treats the symptoms with drugs and ignores the cause that largely arises from the loss of cell charge. I guess that the pharmaceutical companies consider that there is no money to be made in recharging cells with structured water and other syntropic forces. There is clearly money to be made with sickness.

The **de-structuring of water** in *modern* society is a major issue for the health of all living species, and gene expression. Research has shown that de-structured water is far less hydrating for cells and this leads to dehydration. Chronic dehydration is the root cause of about 70 diseases, including aging, arthritis, gastro-intestinal (GI) dysfunction and Alzheimer's disease (ie. inability to recall memory.) Dehydration can also fray the DNA telomere strands and this is further evidence that de-structured water and subsequent dehydration are undermining the shape, integrity, and electromagnetic field of DNA. Similarly, research shows that aging does not cause cellular water to become de-structured, but rather de-structured water causes aging.

However, DNA is continuously bombarded with **entropy** or decaying forces in the *modern* era. These entropy forces have escalated since the 1970's and include:

- Microwave oven, friction heat radiation (ie. electromagnetic frequencies: EMF). Research during the 1980's has demonstrated that this entropy will seriously affect the alkaline amino acids of lysine and tryptophan, red and white blood cells, and change the polarity of cellular water from negative to positive. In the case of tryptophan, it becomes radiated and therefore not readily available to make serotonin: the happy hormone that reduces anxiety and depression. Is it any wonder that these health conditions have escalated since the introduction of microwave oven radiation? A microwave oven, turned on at the power point only, will emit radiation out to about 6 metres.
- All other forms of household radiation (EMF) from mobile phones, Wi-Fi, televisions, computers, electric blankets, baby monitors, etc. will affect DNA coherence or function
- Toxins from chemicals sprayed into soil, plants, water and air then make their way into food, drinking water and the air that we breathe
- Pharmaceutical drugs have toxic effects that reduce the cell's negative charge and therefore capacity to protect DNA cohesion
- Municipal water treatment systems of toxic chemicals that are added to the water, eg. chlorine as an anti-pathogen, fluoridation as an additive (a toxic byproduct derived from aluminum and chemical fertiliser processing), and calcium carbonate to buffer the acids (pH stabiliser as chlorine makes the water acidic). Municipal drinking water that is recycled contains the physical and/or energetic forms of hormones, fluoridation, chlorination, pharmaceutical drugs (eg. estrogen from the birth control pill, anti-biotics, etc.)

Of course, there are many other examples, such as when water is *electrically* ionised (as in some water treatment systems), the existing water molecule bonds are broken, and this creates water with an electrical charge. This water has no magnetic signature and holds no structural information.

However, if you treat this dead water with a Phi'on water device you will restore:

- The **permanent negative charge** that enables the water to receive, store and transmit syntropy energy
- A **higher surface tension** capacity
- The **anti-pathogenic and preservation capacity** of the water
- The capacity of the water to **transform or transmutate toxic chemicals** and metals (ie. reprogram the toxic, entropy energy to *life-affirming*, syntropy energy)
- The overall **life-force energy of the water** to sustain cell DNA coherence and integrity (ie. the capacity of a cell to store and transmit the complete instructions for regulation and healing of a species)

When the role of structured water to sustain DNA coherence and integrity is extended to all living species the implications become incalculable for life. Firstly, if we consider the human body with at least 30 trillion cells (and it could be up to 100 trillion) and that 99% of the molecules in a cell are water molecules, then there are potentially one thousand trillion, trillion molecules of structured water to store information: an infinite information fractality capacity. Consequently, this is not just about memory in every cell it is also about the consciousness of every species. Therefore, I say: structured water has the highest level of consciousness and all living species have consciousness due to presence of structured water in the cells of species. Every cell in a species is the *entire consciousness* of the species.

The cell stores experiential information (including *past-life* information), and often called *soul* or the *seat of consciousness*. The cell information is also the generator of thoughts. That is, a thought is an *electro-magnetic experience* stimulated by cells and can occur in pico-second throughout the body. The capacity for thought is embedded in the negative charge of the cell's structured water. Consequently, this information capacity is past to the *eggs and sperm* of species, and similar reproductive systems of other species, eg. plants. Consequently, the DNA of a new life contains the *experiential information* from the ancestral (parental) line.

Once we extrapolate this cell function to receive, store and transmit information into the universal and local environment of a species, then the experiential information is either nourished or decayed, depending on the environment.

The experiences from day one in the womb through the first 1000 days of *mother nurturing* are critical experiences in shaping consciousness into the new life of a human. In the womb you consciously entrain or register every thought of the mother, and every experience. Your genetic expression has started its journey of being shaped by environmental experiences (epigenetics). Your genes do not live in the past: they live in the present and future of environmental experiences.

Genes do not cause disease: disease is the default position of degradation of cell water through loss of negative charge or change of polarity to a positive charge: cell de-structured water is the default value for disease. On the other hand, if your life experiences are nourished by syntropy energy, and regardless of genetic propensities (either entropy or syntropy expressions) your cells will resist disease and slow down aging.

The science of subtle energy influences (eg. entrainment) on human wellbeing is in its infancy. Similarly, the subtle energies of water (eg. consciousness and memory) is also in its infancy. This situation arises because subtle energy science is largely outside of the domain of academia and public discourse. Consequently, we do not perceive our body as an energy system, except in Traditional Chinese Medicine (TCM). The so called modern medicine of Western civilization would like you to think that the body is a chemical system and requires *Rockefeller medicine* for healing. The subtle energies outlined above are not electro-magnetic. Dr Tiller (former professor at Stanford University) described these subtle energies as *magneto-electric* or

magnetic in nature. Consequently, restructuring water with magnets is now a common and developing technology, and a technology mastered by Phi'on to create a permanent negative charge in the water.

In the broad schema of subtle energies, we now know that structured water is influenced by subtle energies to receive, store and transmit them from our environment. Structured water also has this innate capacity to influence our DNA and therefore our genes.

Every cell of every species has the potential to hold within structured water, **the secret of life**.

Conclusion

The structure of the water molecule in cells has incredible impacts on the quality of life. When cell water reaches its highest potential negative charge, it is in a condition to constantly process structural information and interact with every other cell within a split second. This process is so fast that a thought has materialised before we register the thought in our conscious mind. The experience of thought can then actualise emotional and physical actions that cascade throughout our body. It is the structured water that synchronises this experience and the quality of the experience depends on the strength of negative charge of the cell water.

Research clearly points to structured water in cells providing the integrity and complexity of communication and awareness (consciousness) that underlies intelligence, self-value, wellness and coherence in decision-making. In many people, structured water is the basis of their greater sense of spirituality, memories and the realisation of thoughts into actions.

We are water and structured water is the reflection of our soul (life and past life experiences)

Everyone has a capacity to manifest a higher level of wellbeing, including love, joy and hope through sustaining a higher order of cellular charge. The knowledge of how to embrace syntropy energies, like structured water, is the key to manifesting the structural or energetic information (energy) that sustains life.

Conversely, when cellular fluids lose structural integrity, it produces incoherent information transfer that leads initially to tiredness, sickness and eventually disease (particularly auto-immune and cardio-vascular disease and cancer). The structural integrity and energetic capacities of DNA are highly dependent on cell water retaining its geometric and magnetic complexity. For example, cellular dehydration, toxicity, loss of nutrients (including hydrogen and oxygen), stress, emotional upset, etc. contribute to cellular dysfunction. Optimal health requires concentrated energy input to support cellular function, and this requires knowledge of how cells achieve coherence.

Western medical philosophy has completely ignored cell energy as a link to disease, even though these ideas and evidence have been in scientific literature, at least since the 1930's. Consequently, a more holistic approach to medicine is necessary and a greater emphasis on the cell energy link to disease could bring about new preventions for disease in the future.

Most people know when they are at *flat battery*. This is a situation that requires courage, strength of will (intent) and self-responsibility to change the relationship between wellbeing (high cell negative charge) and patterns of behaviour that drag people towards mortality. Our public health systems are not set up in way to help in this regard, so the pathway to self-realisation of wellbeing comes from a conscious connection between an individual and their cell water: the seat of consciousness.

The answer to the question posed in the heading of this essay: **why are the Phion water devices unique and different from other water restructuring devices**, is:

- The Phi'on devices create a permanently high negative charge in drinking water and other drinking fluids (eg. raw milk, wine, juices, etc.)
- The Phi'on water has a high syntropy energy that is measured in its increased surface tension, and capacity to increase charge over time (ie. entrain other syntropy energies like light energy)
- The Phi'on water has a unique preserving and anti-pathogenic capacity that restores the integrity of fluids and this has implications for cell immunity and coherence.

All cells in all species are in resonate coherence with structured water and therefore we need to drink structured water daily. If we can understand how to increase the structural integrity of cells (eg. mitochondria, DNA and genes) we will be successful in forming proper bio-feedback or communication pathways between cells, in a continuous stream of cell regulation and healing.

While death is inevitable, wellness is achievable.
