YOUR *family*
& YOUR *wellbeing*
FIRST

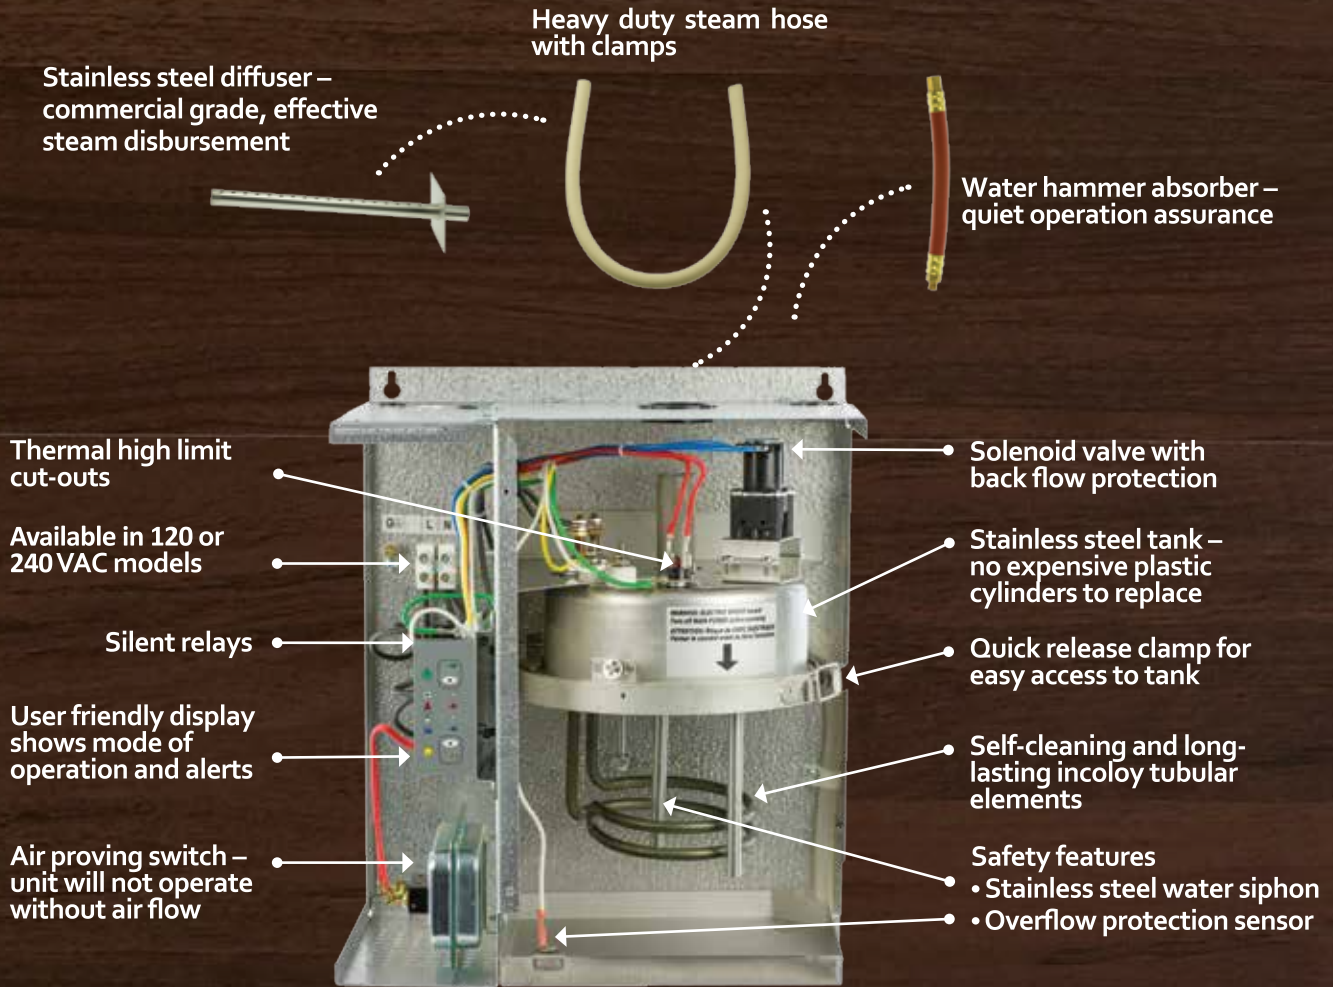

When your home is too dry, you are more susceptible to contracting viruses, colds, flu and other respiratory illnesses. **Acu[≈]STEAM** provides humidity by generating steam; the most germ-free form of moisture. Other types of humidifiers can produce and expose us to molds, bacteria and airborne viruses.

A humidifier is used to maintain optimal humidity levels in your home, essential to a healthy living environment. Industry research recommends keeping humidity between 35-50% during the heating season.
