

INSTALLATION INSTRUCTIONS

G-Cling Window Film

Residential Custom Cut

Please Read Before Application

1. Our Static Cling film is applied onto the inside of windows.
2. Do not use on windows with visible flaws, cracks or nicks. Do not use on non-tempered Low-e glass.
3. Either side of the film can be applied to the window. The film will be applied as is. There is no backing to be removed.
4. Mix the "tint-on" solution into the included spray bottle before starting. (Included in the tool kit)

How to Mix Solution: Pour the packet labeled "tint-on" solution into the bottle. Fill bottle with water. Mix well.

*Note: If you did not purchase a tool kit with provided solution, soapy water can be used as application solution.

Installation Tool Kit: Tool kit is not included and must be purchased separately.

Removing & Storing: Keep the white paper liner if you would like to store and reuse the film in the future. For removing, peel film off from a corner of the window. Pull gently. For storing, place the removed film on the liner. Roll it up and store at room temperature. When reusing, unroll and use soapy water to clean the film before applying again.

- 

1. Clean the window you wish to apply the film to. Make sure there is no dust or dirt left on the window. Use squeegee to remove dirt if needed.
- 

2. Spray a generous amount of the application solution onto the window and the window film.
- 

3. Carefully apply the film to the window. Either side can be applied. Adjust as necessary. Spray the film again. Film must be wet when using the squeegee to avoid damage.
- 

4. Begin using the squeegee starting from the center to the outer edges. It's best to use firm pressure to ensure all solution and bubbles are removed from under the film.
- 

5. If there is excess film, press firmly on the edge using the cutting stick as a guide. Then use the cutting knife to trim the excess film.

Tip: You can spray and repeat step 4 if bubbles or solution remain under the film. Be sure to start at the center and apply firm pressure.

Caution

- Please keep cutting knife out of reach of children.
- In case application solution comes in contact with eyes, flush thoroughly with water. If irritation persists, seek medical attention.
- Do not use or move windows for 48 hours after application.
- Do not use suction cup on window for 48 hours.

We want to offer you a **10% discount** exclusively for our returning customers. Enter code "**GF4EVER**" at checkout only on our website. Feel the heat when driving? Check out our pre-cut window tint for your car.
