**Description-**

A wearable wound simulation that represents third degree burns on the right forearm in the form of a slip on device. This wearable wound comes without a bleeding system. The PATENTED construction with SOFTTECH® material, provides realism for your training scenario.

**Construction-**

The representative skin and tissue of the WW3-004 is constructed of high quality silicone rubber, with layers of coloration that provide a depth and realism to the product. In addition, the SOFTTECH® material has a realistic feel, and is very durable and UV resistant. The skin also contains a reinforcing fabric that provides strength, and resistance to tear propagation should the skin be punctured or cut.

**Operation-**

The wearable wound device slips onto an actor's right forearm for a snug and realistic fit.

**Maintenance-**

The simulation should be rinsed in clean, warm water and allowed to dry before storage. The device may be washed with mild detergents like dish soap or cleaned with a disinfecting agent like isopropyl alcohol or a diluted bleach solution, as it is durable, and chemically resistant. Allow the device to dry fully before storage to prevent mold or mildew growth.
