STICKY FOLIO™

TRICKS & TIPS

1. Always insert your adhesive sheets in the Sticky Folio with the easy lift tab in the lower right corner to ensure adhesive is the right way up each time!
2. Ensure that the back of your sticker is fully covered in adhesive dots before applying to your project.
3. More than 2 adhesive dots are required to adhere a sticker. If the item is too small for 2 or more dots different adhesive may be required.
4. Use tweezers to place & peel sticker from the adhesive sheet. This keeps fingers clean from glue, keeps adhesive on the sheet sticky, and prevents a sticky work surface.
5. After applying sticker to project you may need to burnish the sticker again with the burnishing side of the tweezers and a scrap piece of paper.
6. Allow 24 hours for adhesive to fully cure & become permanent.
7. Make sure cover sheet is placed over adhesive and elastic closure is securely in place while storing. This prevents adhesive from drying out.
8. You can place items in the negative space of a frame shaped item, or just place adhesive on the edges of items to preserve adhesive.
