

Laptop Stand with Second Tier Instruction Sheet

JS-LPT200 item #17359

(2) Support Poles

(4) Support Pole Extenders

(2) Support Arms

(2) Support Legs

(1) Second Tier

(4/4) Pole Knob and Washers

1 Remove pole knobs and washer from Extenders (4 total each).

2 Place support poles in front of your laptop to determine if support pole extenders are needed. If extenders are needed add them to the support poles (Both support poles need to be the same Length).

3 Line-up holes on the Support arms and legs to desired height. Place pole knobs and washers through holes to help hold support arms and support legs together.

4 SIDE 1: While pole knobs hold support arm and legs together, screw support poles into pole knobs.

5 SIDE 2: While pole knobs hold support arm and legs together, screw into support poles.

6 Loosen the two knobs on the second tier and slide the two sides apart. Don't remove the knobs, if they unscrew all the way, screw them back on.

7 Choose a support pole and loosen the support pole knobs. Slide the second tier over that support pole. The slot on either side of the second tier should fit between the pole knob and the support arms. Adjust the second tier so that it clamps around the support arms and pole tightly. Tighten the two knobs on the second tier, then tighten the pole knobs.
