

LUCITE CARE INSTRUCTIONS

Lucite products should be cleaned weekly to avoid build up from dust.

Any scratches should be dealt with straight away to avoid them from becoming ingrained.

Different Methods:

Use a damp microfiber cloth and wipe down gently.
No rubbing or scouring.

Mix a few drops of dish washing liquid in to a gallon of warm water and wipe clean with the micro fiber cloth. Ensure the cloth is damp.

No need to rinse. Allow to air dry.

If too much soap was used rinse it off.

Use a hair dryer on cool air.

Use commercial acrylic cleaner such as 'brillianize' and follow label instructions.

To remove scratches, use a cleaner like Novus 7100.

WARNING!

Don't use any cleaners which are abrasive or contain ammonia, often found in window cleaners. They leave the Lucite cloudy and can cause permanent damage.
