

DCS Depth Control System

“On-the-Fly” Depth Control

The days of manually adjusting cutter depth are over. SMITH's new electronic depth control system raises and lowers your cutter with the push of a button!

**Available on the
SMITH SPS10 Scarifier,
FS351 Heavy-Duty Surfer,
and the
LNX8 Rotary Eraser**

DCS Performance Benefits:

Eliminate Measuring and Guesswork

- Adjust cut depth in 0.01 inch increments
- Easily align with ever-changing terrain
- Consistent cut depth for inlay applications
- Eliminate damage due to dropped drums

Ultimate Control and Flexibility

- Easy adjustment via control panel and handlebar controls
- Set zero point where cutter meets surface
- Displays active depth from zero point
- English and metric adjustments

Durable, Maintenance-Free Design

- Aluminum control enclosure holds up to harsh job site environments
- All electronic components are 100% encapsulated to protect against vibration and weather
- Linear actuator enclosed in sealed case to resist water, dust, and debris
