General Use and Safety Guidelines

STACKING BOX (STKB)

1. Do not exceed the recommended maximum weight capacity for each stacking box (**Note: The max weight capacities listed are static, and do not take into consideration impact or dynamic forces.) = 3,000 lbs. per box.
2. Maximum load height is 29". Maximum length of product to be stored is 10'. Load should always be centered and balanced. Do not allow long remnants to protrude into aiseways where they may cause injury or be hit by a moving vehicle or forklift.
3. Do not stack more than three boxes.
4. When stacking boxes, do not remove forks until a secure connection is confirmed between each box.
5. Forklift, transport, or move stacking box with a pallet jack only after product has been secured. Lift only from sides parallel with product orientation. Secure load using the provided four steel eyelets (two on each side of the box). Do not move, stack or transport boxes while stacked.

IMPORTANT NOTE: If you have questions concerning any of the above guidelines, or any product not specifically mentioned, please contact Groves Incorporated immediately for further information.
