

High Performance / High Strength Epoxy Grout

Three component, 100% solids, high strength, low exotherm epoxy grout. The system combines a high strength epoxy resin and curing agent with a specially engineered blend of graded aggregates. The special aggregate blend provides excellent flow and uniform distribution throughout the high strength epoxy matrix. The low exotherm epoxy resin allows a long work time and deep pour capabilities.

✓ Benefits

- Special aggregates allow high flow capability
- Apply in 18" lifts
- Over 14,000 psi in 14 days
- Excellent volume stability for maximum bond and load transfer locations.
- Superior chemical resistance
- Apply at 60% extension for precision grouting

Packaging

- .5 cubic foot units
- 2 cubic units

Usage

- Perform in functions that normally requires 2 epoxy grouts
- Suitable for deep pour applications
- Can be reduced to 60% extension for precision grouting
- 1 epoxy grout for all applications
