TRAVERFILL PRO

Adhesive for filling and repairing travertine

TRAVERFILL PRO is a premium grade pre-colored adhesive designed to fill and repair travertine. This product has been engineered for maximum bonding strength for indoor applications where travertine surfaces are in need of repair or holes/pits need to be filled. **TRAVERFILL PRO** is easy to use which makes it ideal for both homeowners and professional fabricators and installers.

For Use On:

travertine and limestone.

For indoor use. Not suitable for exterior applications

Available Sizes:

quart

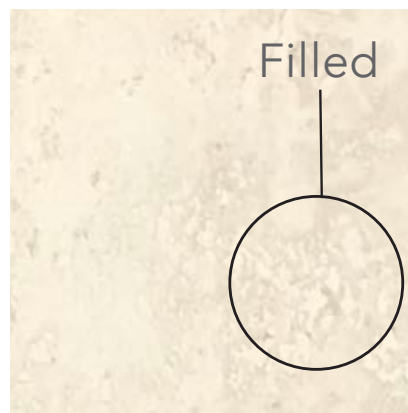

Convenient custom lid for mixing components and storage of BPO cream hardener.

Part:

A-TFPQ

How-To-Video

Application Instructions:

For best results, surfaces must be thoroughly cleaned and dried. **TRAVERFILL PRO** is intended to be mixed with 2%-4% of the white paste hardener (BPO) by weight (golf ball size portion of resin to a pea size portion of cream hardener). Contents can be mixed with a wooden stir stick in the provided plastic lid. At a temperature of 70°F (21°C), the mixture stays workable for 4-6 minutes. Higher temperatures shorten the working time and lower temperatures extend the working time. After 20-30 minutes, the adhesive is fully cured. For indoor use only. Do NOT store above 75°F (24°C). Thoroughly rinse and clean lid before storing for future use.
