Push to Talk "Connect Chat"

Nursery Pal Dual Vision

Wall Mount Accessory

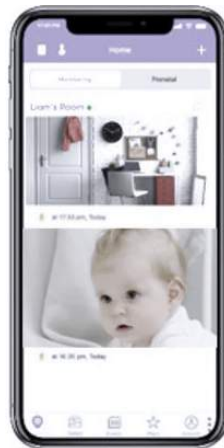

Nursery Pal Dual Vision

Full Room & Close Up

Top Camera provides a wide-angle view, while the Bottom Camera gives you a clear, close-up view of whatever person, pet or object you want to see in larger detail.

See your nursery and a close up of baby at the same time.

BabyZone Areas

First define the BabyZone area via the Hubble app.

Once a person or pet enters that BabyZone area, the system will push an alert to the Hubble app and the Bottom Camera will pan to display the close-up image.

Connect Chat

When the Connect Chat function is activated, the Bottom Camera automatically follows the movement of the selected person.

You can chat with and see your love one as they move around in the room.

Sleep Is a Problem for Most Parents

- Nearly 1/3 of parents have a significant problem with their child's sleep behavior
- Frequent night waking that disturbs parents is common from 4-12 months
- 71% sleep through the night on at least one occasion by 3 months of age, but many relapse into more frequent waking in the 4 to 12 month period
- It is not until after 24 months that regular night waking (requiring attention) becomes much less common

84%

Infants don't sleep through the night at 6 months

Sleep Diary – How It Works

- Infants have different sleep patterns to adults, who may sleep 6-8 hours straight
- An infant may have 6-8 ‘sleep events’ within a 24 hours period

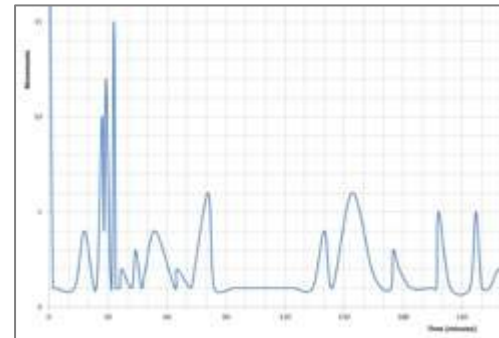

(1) Infant Automatically Detected in Sleep Area

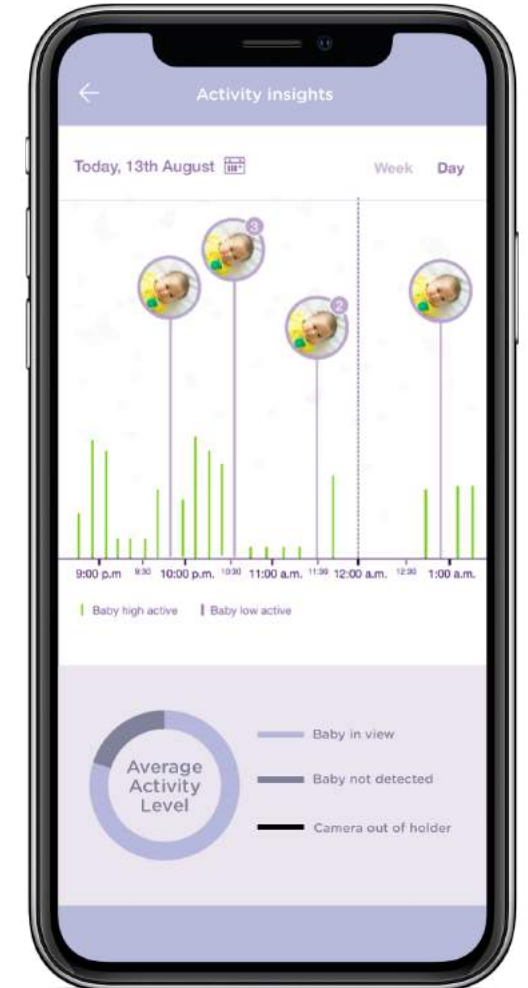

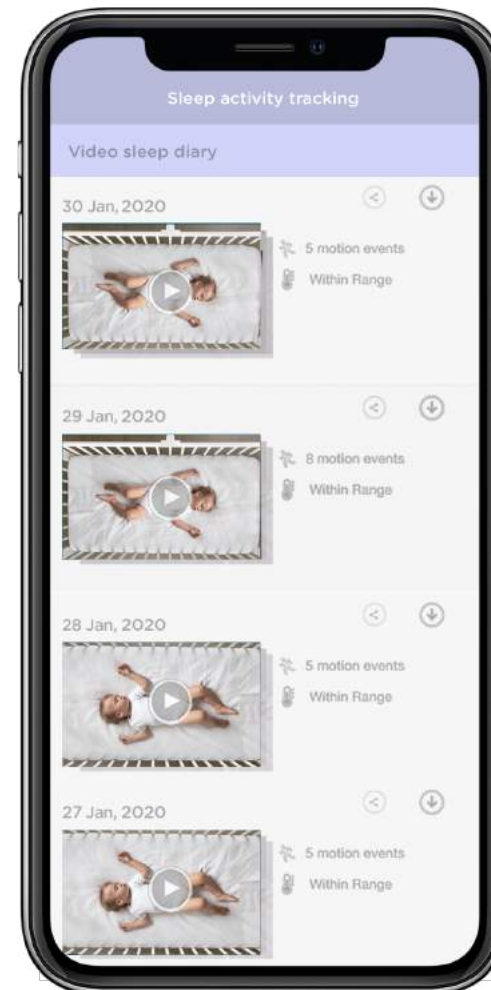

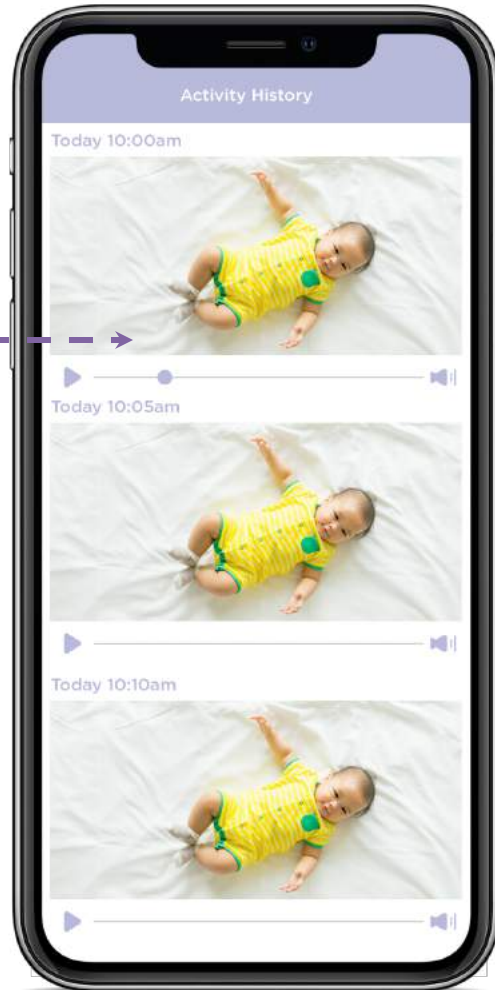

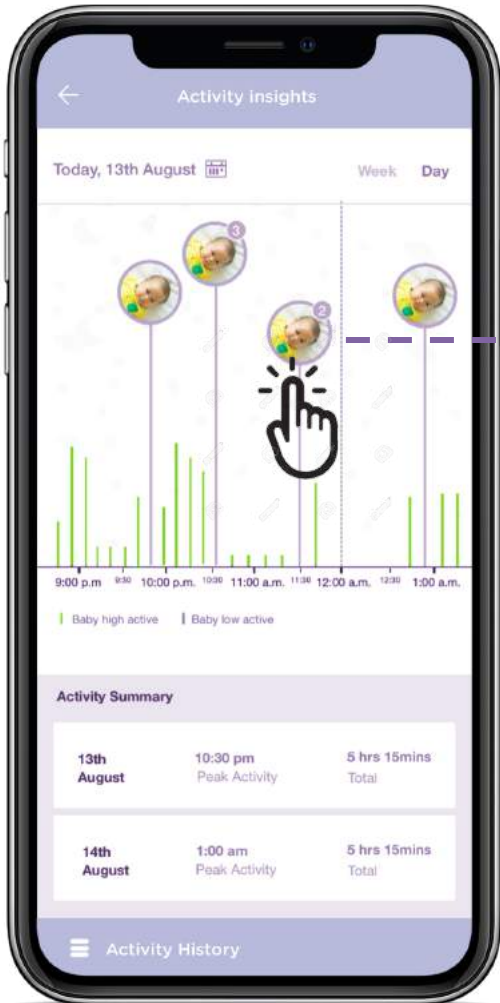

(2) Movement Data Captured by Device
and Sent to Cloud Server

(3) Analyzes for Sleep Quality Pushed to App*

Sleep Insight

All captured videos are represented in the form of a timeline graph

All captured videos are presented in an event list, in order of time occurrence

A daily activity summary lets parents see their baby's activity patterns and even understand their baby's sleeping routine and quality of sleep

Nursery Pal Crib Edition

5" Smart HD Baby Monitor with Touch Screen Viewer

Sleep training

All Hubble Connected products featuring a night light include Sleep Training functionality

What is sleep training?

- Sleep Training naturally alerts your mind when its time to sleep and wake up, providing parent and child with a full night's rest.
- Infants require as much sleep as possible, but even adults typically require at least 8 hours of sleep per night for a functional day.
- As infants grow more sensitive and alert to their surroundings, bed and nap times are disrupted.
- Teach your child the visual queues for "sleep."
- Turn on the night light to indicate "sleep" or "wake up."
- Several new Hubble products feature Sleep Training.
- A good night's sleep is a dream Hubble makes it a reality.

Listen Audio Monitor Series - Unique Features

A soothing light on the baby unit gently illuminates a dark nursery.

Wireless & Portable Baby Unit makes it possible to monitor from anywhere without worry of electrical cable connection at home.

- Read the room temperature status of both baby units at one glance on parent unit to monitor two loved ones in different rooms - works for 1 parent unit plus 2 baby unit bundle.

Works for 1 parent unit plus 2 baby units bundle

Two Parent Units work as indoor walkie talkie at specific private channel, keeping the baby end undisturbed.

Roo Works with Alexa

Alexa, ask Roo to add a kick !

Ok, one kick added

Alexa, ask Roo to add glass of water

Ok, one glass of water added

Alexa, ask Roo how many glasses of water today?

You had 8 glasses of water and your target is 12 per day

Alexa, ask Roo to record my today's weight as 65.

Ok, weight recorded as 65 kilograms

Alexa, ask Roo to remind take folic acid after 2 hours.

Ok

Alexa! ask Roo, what to expect for next week?

You are about to enter in 13th week, and you can expect your baby to grow rapidly, and his head will grow faster than body. You may also notice slight weight gain with possibility of stretch marks on your abdomen, breast, or hips
